# BULGARIAN NATIONAL BANK 

ANNUAL REPORT•1999

The Bulgarian National Bank's 120th Anniversary was on 25 January 1999. One of Bulgaria's most venerable institutions, the BNB noted the occasion with a special Jubilee Program of Events. This included publishing a detailed, annotated and illustrated history of the Bank; a collection of archive documents from 1879 to 1900 (jointly with the Council of Ministers' Chief Office of Archives, and first stage in a project to publish major Bank documents from inception to 1989); a catalogue of all banknotes issued by the BNB; and a catalogue of the BNB Art Collection, whose best works went on temporary show at the National Art Gallery as part of the Jubilee. The BNB headquarters hosted a public exhibition on money in the Bulgarian lands from antiquity to the present. A commemorative coin was minted for the occasion. The scientific conference on the Art of Eastern European Central Banking in the 1990s saw participation by central bank executives from the region and leading nations. The Jubilee Program contributed to the establishment of a BNB institutional memory: an intangible condition for raising Bank authority and effectiveness.

## I. Developments in the World Economy and Finances

## 1. An Overview and Major Trends in the Development of the World Economy

Global economic and financial conditions improved markedly in the past year despite severe repercussions from emerging markets turmoil. Positive developments reflect reviving credibility in financial markets and rebounding economic activity in Southeast Asian countries, Japan, and Russia. World output growth stood at $3.3 \%^{1}$ and world trade grew slightly: from $4.2 \%$ in 1998 to $4.6 \%$ in 1999.

DEVELOPMENTS IN WORLD OUTPUT AND TRADE

Source: IMF.
The IMF forecasts a continuing recovery of world output (4.2\%) and trade $(7.2 \%)$ based, to a great extent, on expectations of continued expansion in the USA and steady growth in Europe.

As a result of higher demand for energy inputs and their severely restricted supply from OPEC countries, international prices of energy commodities doubled but this did not have serious implications for global inflation. According to estimates, inflation for 1999 has hit a forty year record low. The IMF forecast is for a $1.4 \%$ inflation in developed countries, $6.5 \%$ in developing countries, and $43.7 \%$ in transition economies.

Even though private investors' credibility in emerging markets was restored in the past year, reported investment flows could not regain the levels of the pre-Asiancrisis period. Investors' interest focused chiefly on attractive American stock markets as these provided the best financing terms.

[^1]
## 2. Developed Countries

Despite the slowdown in the business cycles of European Union member countries, developed countries as a whole posted $2.8 \%$ growth in 1999. This is mainly due to the recovery of the Japanese economy and strong growth rates in the USA and Southeast Asia. Inflation (1.4\%) dropped well below average and unemployment, measured as a percentage of the labor force, is set to gradually decrease between 1999 and 2001. Budget deficits of the seven major countries are forecast to fall to $1 \%$ of GDP on average, consistent with the policies of fiscal consolidation and improved tax collection pursued.

The European Union

In 1999 growth rates of European Union member countries slowed to $2.3 \%$. Higher external demand and gradual euro devaluation helped regain previous export volumes. ${ }^{2}$

BASIC MACROECONOMIC INDICATORS FOR EUROPEAN UNION MEMBER COUNTRIES

Source: IMF.
Expectations of swift economic growth in the first year of European Monetary Union were not fulfilled due to significantly divergent business activity in different member countries. The business cycles of the three leading members of the European Union also diverged: while France's economic growth peaked, Italy and Germany experienced the first signs of economic recovery.

At the end of 1999 Community business climate improved substantially. This may boost investment demand and hence improve growth prospects. Unemployment dropped to $8.9 \%,{ }^{3}$ thus contributing to enhanced consumer demand. Continued euro devaluation against the US dollar boosted demand and economic activity in the eurozone. The sharp rise in energy input prices did not put pressure on inflation and the latter remained at the past year's levels.

The European Central Bank is set to continue pursuing a flexible monetary policy in 2000, taking into account economic growth rates, labor market conditions, and movements in international forex markets, as well as inflationary expectations and expansion sustainability. The heavy tax burden remains a major concern among

[^2]member countries. Stabilizing governmental finances and creating conditions for long-term sustainable growth entails eliminating the structural deficits prevalent in most countries.

The forecast for 2000 is of some $3.2 \%$ growth in GDP and $1.8 \%$ inflation. Expectations of a decline in unemployment to $8.4 \%$ ( $9.4 \%$ for the eurozone respectively) will depend to a great extent on forthcoming reforms in labor legislation whose delay may be a barrier to the efficient operation of the monetary union.

The USA
In 1999 the US economy posted yet another high economic growth result $4.2 \%$. This was driven by strong internal demand ( $5.1 \%$ ) outpacing supply growth rate. The latter, in combination with a constantly appreciating dollar, precipitated a trade balance deficit and, contrary to expectations, did not put pressure on inflation. Given high international prices of raw materials and energy inputs, the consumer price index rose by $2.2 \%$ from $1.6 \%$ in 1998. Increased labor productivity over the last two years coupled with all-time low unemployment (4.2\%) for the last three decades played the role of a constraining factor.

The GDP forecast for 2000 is of $4.2 \%$ growth and sustained all-time low levels of unemployment $(4.2 \%)$ and inflation $(2.5 \%)$. The greatest challenge for the US economy in 2000 is dependence of the currently high economic growth on stock market optimism. Fears are over a possible dramatic downward revision of stock indices causing shocks in the economy if financial assets' prices fail to effect a 'piecemeal landing' to reduce inflationary pressures. Under such a pessimistic scenario, the US economy may enter into recession, which will reflect adversely on global growth.

In 1999 the Japanese economy made efforts to emerge from the crisis, posting a $0.3 \%$ GDP growth. As anticipated, hopes of emergence from the crisis associated with a government program providing incentives to domestic demand failed to materialize: it had only a short-lived effect. In the second half of 1999 the economic situation was characterized by weak consumer demand consistent with low real incomes and uncertainties about employment. Exports, the major driving force for growth in Japan, were severely depressed between July and December 1999 due to weak external demand and the sizeable appreciation of the yen against the US dollar.

Forecasts for 2000 are based on scepticism about the efficiency of implementing government measures. Consequently, GDP growth is forecast at $0.9 \%$, inflation at $0.1 \%$ and unemployment at $4.7 \%$, retaining the previous year's level.

## 3. The Transition Economies

Under the impact of the Southeast Asian crisis of late 1997 and subsequent events in Russia, differences among transition economies heightened substantially. The inflow of foreign direct and portfolio investment was strongly affected by the Kosovo Conflict, with Southeastern Europe still experiencing capital deficiencies.

According to IMF forecasts, ${ }^{4}$ in 2000 the transition economies will post a growth of $2.6 \%$. Central and East European countries' overall growth is forecast at $3 \%$. The forecast is associated with economic stabilization in Russia and higher growth rates in the European Union, which are major trading partners.

Central

## Europe

The Hungarian economy did well in 1999. Growth reached $4.1 \%$ driven by strong domestic demand reflecting swift export growth. Concurrently, the country's budget deficit fell to $2.7 \%$ of GDP, ${ }^{5}$ combined with a decrease in the current account deficit to $4.3 \%$ of GDP.

[^3]Stable operation of the effective monetary regime of 'crawling devaluation' in combination with an adequately managed banking system created conditions for an improved business climate and sizeable foreign direct investment. Economic growth in 2000 is forecast ${ }^{6}$ at $5-6 \%$, and budget deficit at $3.5 \%$.

In 1999 Poland posted GDP growth of $4.1 \%$ coupled with reduced annual inflation at $7.3 \%$, a budget deficit of $2 \%$, and industrial output growth of $4.4 \%$. At the same time, current account deficit rose further ( $7.6 \%$ ), contributing to pressure for złoty devaluation.

Forecasts ${ }^{7}$ for 2000 focus on accelerated GDP growth at $5.1 \%$, a slight rise in the current account deficit ( $8 \%$ of GDP), reduced inflation of $5.2 \%$, and a budget deficit of $2.3 \%$. Major risks for the development of the Polish economy stem from high unemployment and a possible fall in exports.

BASIC MACROECONOMIC INDICATORS FOR TRANSITION ECONOMIES

Source: BIS.
In 1999 the Czech economy experienced a decline in GDP $(0.5 \%)$ for the second year running, reflecting weak external markets and depressed domestic demand. The budget deficit accounted for $1.6 \%$, and the balance of payments current account deficit rose slightly ( $2.4 \%$ ). Economic vulnerability in the Czech economy reflects the lack of serious policies for restructuring the banking sector and big industrial enterprises.

The forecast ${ }^{8}$ for 2000 envisages a $1.6 \%$ GDP growth, an increase in annual inflation to $4.2 \%$ and unemployment of $10.5 \%$.

## Russia

In 1999 the Russian economy posted a $3.2 \%$ growth, reflecting improved macroeconomic conditions. Rigorous monetary and fiscal discipline at the beginning of 1999 created conditions for recovery of industrial output and an $8 \%$ increase in wholesale sales on the previous year. Expectations that rouble devaluation and high international energy prices would boost exports dramatically did not materialize. Economic growth was achieved thanks to large net exports. The surplus on the balance of payments current account (USD 18 billion) was largely offset by a continued outflow of foreign capital reflecting lack of credibility in economic policy and

[^4]unclear prospects. Consequently, forex reserves rose by USD 1.6 billion alone.
The banking sector was severely hit by the August 1998 crisis. Lack of progress in banking system restructuring reflected on commercial banks' ever-increasing reluctance to lend to companies and households, which reinforced the downward trend in real credit to the private sector. Against the backdrop of nonexistent investment opportunities commercial banks moved toward establishing broad liquidity positions on their accounts with the central bank.

Prospects for the development of the Russian economy in 2000 are associated with economic growth driven by increased exports and higher domestic demand. Achievement will depend on the progress of reforms in the banking and fiscal sectors and successful structural reform. Official forecasts ${ }^{9}$ for 2000 envisage a GDP growth of 1.5 to $3 \%$, annual inflation of 18 to $22 \%$ and $13.9 \%$ average unemployment.

## Countries with Currency Boards

The Russian crisis reflected negatively on the Baltic countries. Estonia reported a $1.3 \%$ decline in $\mathrm{GDP}^{10}$ on the previous year for the first time in five years. Exports grew faster than imports, contributing to a trade deficit reduction of some 6.5 percentage points of GDP. The IMF forecasts an $8.2 \%$ current account deficit and a $4.8 \%$ of GDP budget deficit. The inflow of foreign direct investment decreased from USD 574.4 million to USD 232.5 million ${ }^{11}$ and portfolio investment accounted for just USD 22.4 million. The reasons for this trend mainly reflect declining investor interest following the Russian crisis, and almost completed privatization in the country.

The agreement with the IMF for a USD 39 million loan (signed on 1 March 2000) may bring about an upward revision of forecasts. Current forecasts point to $4 \%$ GDP growth, $4.6 \%$ annual inflation and contraction of the budget deficit to $1.2 \%$.

In 1999 the Lithuanian economy reported a $3.3 \%$ GDP decline on the previous year, reflecting severely depressed domestic demand reinforced by a downward trend in wholesale trade. Inflation dropped from $5.1 \%$ in 1998 to $0.8 \%$ in 1999. The repercussions from the Russian crisis and flat international trade reflected on trade volumes contracting by some $20 \%$. The budget deficit stood at $8.6 \%$ of GDP and unemployment rose by some three percentage points.

Estimates ${ }^{12}$ for 2000 point to $21 \%$ GDP growth, a $2.8 \%$ of GDP budget deficit, $2.2 \%$ inflation, and a current account deficit of $9.1 \%$ of GDP. Expectations of positive trends in the economy are closely associated with the standby agreement with the IMF for a USD 83 million loan in support of the government's economic program.

[^5]II. Developments
in the Bulgarian Economy

## 1. Major Events in 1999

## The Kosovo Conflict

 and Herzegovina, Bulgaria, Croatia, Macedonia and Romania were hardest hit, though to different degrees. The major consequences of the conflict for these countries are associated with an inflow of refugees, disturbed international trade, blocked transit routes to Western Europe, eroded foreign investor and tourist confidence, limited access to international capital markets, and delayed restructuring. The negative effects have been partially offset by intensified activity related to reconstruction of Yugoslavia and South-Eastern and Eastern Europe after the war and the projects financed by the Stability Pact.The inflow of refugees from Kosovo was the greatest problem for Yugoslavia's neighbors. However, the refugee problem did not affect Bulgaria since the biggest movements were to Albania and Macedonia. Bulgaria extended humanitarian aid, paying the bill for one refugee camp in Macedonia. The humanitarian aid of USD 0.7 million extended by Bulgaria is apparent in the balance of payments capital account for June 1999.

Approximately $60 \%$ of Bulgaria's exports pass through Yugoslavia. Damaged roads and disturbed navigation on the Danube prompted a decrease in exports to third countries and increased transport costs due to the use of alternative routes. Between January and June 1999 exports declined by $17 \%$ mostly because of the Kosovo Conflict and the Russian crisis. As a result of increased exports in the second half of 1999, the volume of transportation services was partially restored. Having dropped in the first quarter due to the conflict, exports to Yugoslavia started increasing gradually after June 1999. The average monthly volume of exports prior to the conflict amounted to USD 4.5 million, while after the war it rose from USD 13.3 million in July to USD 25.1 million in November and USD 28.8 million in December. This growth reflects expenditure on Yugoslavia's postwar reconstruction and the participation of Bulgarian companies in it. Exports of petroleum products almost doubled after June. Against the background of an overall export drop in 1999, the volume of exports to Yugoslavia increased.

Reduced exports to CEFTA and certain EU member countries might be ascribed partly to the Kosovo Conflict. Moreover, imports from these countries rose on 1998 even during the war. Consequently, worsened transport conditions may not be blamed as a major factor in the export slowdown. This is evidenced by reduced exports to countries unaffected by the Kosovo Conflict such as Russia, the Ukraine, Greece and Turkey.

Disturbed stability on the Balkans resulting from the military conflict in Kosovo contributed significantly to the fall in foreign tourists visiting Bulgarian resorts. Losses incurred could not be compensated even after the conflict was over in midsummer.

The underdeveloped capital market was not impacted by the Kosovo Conflict. Meagre traded volumes and declining prices were attributable to domestic factors. In terms of foreign investment and privatization, the effect was just a temporary delay: during the second half of 1999 several big privatization transactions were realized, such as the sales of Neftochim and Hebrosbank.

## Redenomination of the National Currency

Pursuant to Article 1 of the Law on Redenomination of the Bulgarian Lev, as of midnight on 5 July 1999 the Bulgarian lev was redenominated. A thousand old levs were exchanged for one new lev, with all other prices being revalued at the rate of $1,000-1$. The Bulgarian National Bank issued Regulation No. 24 of 26 April 1999 on the exchange of old banknotes and coins for new banknotes and coins in connection with the redenomination of the Bulgarian lev.

As of 5 July 1999 the BNB put into circulation a new issue of banknotes and coins with new designs and nominal values: banknotes of $1,2,5,10,20$ and 50 levs and coins of $1,2,5,10,20$ and 50 stotinkas.

The Law on Redenomination of the Bulgarian Lev provided for the gradual replacement of old banknotes and coins by new ones, setting a six-month period during which both new and old banknotes and coins would circulate. During this period BNB tills effected payments in new banknotes and coins. Until ATM readjustment by the end of August, the BNB had effected payments in old banknotes and coins.

Old banknotes and coins were exchanged for new ones at the rate of 1,000-1 without any restrictions. In addition, no time limit was fixed for the exchange of old banknotes and coins. During the period of redenomination the BNB concluded agreements with the United Bulgarian Bank, the Bulgarian Post Bank, DSK Bank, and Bulbank for gratis exchange of old banknotes and coins for new ones. Given commercial bank cash rollover with new banknotes and coins, and enhanced public interest in the new legal tender immediately after the redenomination, cash payments effected by the BNB increased significantly. In the first week after the redenomination $13 \%$ (by value) of banknotes and coins in circulation were exchanged, with $36 \%$ by the end of July and $60 \%$ by the end of August.

## The 'Millennium Bug'

Bulgaria's financial system remained unaffected by the Millennium Bug. Work on a solution started in the BNB in early 1998 setting the priorities for tackling the problem.

Top priority was given to Millennium Bug measures at the Banking Integrated System for Electronic Transfer (BISERA), encompassing all national settlements, and including commercial banks, the Central Depository and BORICA. Second priority was given to the BNB. Third priority area was commercial banks, and the fourth priority included BNB participation in tests made by external suppliers of payment and information services (SWIFT, Reuters, Telerate, and Bloomberg).

Work on the Millennium Bug involved coordinated and consistent actions with other national and international authorities and organizations. In respect of BISERA the BNB had worked jointly with Bankservice AD since 1998. For complete reassurance, additional tests were held on 20 and 21 November 1999, and all participants in the payment system checked the changes implemented between October 1998 and November 1999.

Another important aspect of the preparatory work on the Millennium Bug was adjustment of BNB internal systems. A complete inventory of hardware, and of operating system, network and applications software was drawn up in order to confirm Bank readiness for 2000.

Changes associated with the redenomination of the national currency and Millennium Bug had to be implemented in the tight schedule of six months, requiring huge expenditures by the BNB and companies working on the Millennium Bug. Therefore, the BNB Board took a principle decision to include as many tasks as possible in the preparatory work for lev redenomination and Millennium Bug countermeasures. As a result Millennium Bug work at the BNB finished by the end of May 1999.

The Banking Supervision Department paid special attention to commercial banks' readiness for the Millennium Bug. To this end, instructions on the major aspects of the preparatory work and detailed questionnaires for assessing commercial bank readiness were sent to banks in the summer of 1998. The questionnaires were processed and analyzed jointly with IMF consultants.

Thanks to the initiated preventive measures, Bulgaria was not affected by the Millennium Bug.

## 2. The Real Sector

Economic developments throughout 1999 were significantly impacted by external factors. The Kosovo Conflict contributed to the poor performance of exportoriented industries during the first half of 1999. Economic growth in the EU member countries, to which the bulk of Bulgaria's exports is channeled boosted Bulgaria's exports and helped reverse the downward trend in output and exports in the second half of 1999.

Macroeconomic stabilization, reflecting the introduction of a currency board, continued in 1999. Despite increased international commodity market prices and unavoidable rises in administratively fixed prices, stringent compliance with currency board rules kept inflation under control. Increased genuine pay boosted public purchasing power which in turn made domestic demand a major factor behind economic growth. The government reported an insignificant deficit on the 1999 consolidated fiscal program. Tax collectability improved, while budget spending stayed within projected margins. Low and stable interest rate levels contributed to enhanced credibility in the national currency. The banking system remained stable indicating a high capital adequacy ratio resulting from the high liquidity maintained and from prudent lending. The increased balance of payments current account deficit was counterbalanced by the rise in direct and portfolio investment. Bulgaria's balance of payments was continuously underpinned by international financial institutions, resulting in an increase of Bulgaria's forex reserves.

## Gross Domestic Product

According to preliminary NSI data, 1999 nominal gross domestic product reached BGN 22,776.4 million. GDP increased by $2.4 \%$ on 1998 in real terms. GDP dynamics were divergent through 1999. The first quarter of the year saw insignificant growth of $0.8 \%$, attributable to decreased external and internal demand. With the resolution of the Kosovo Conflict, and the gradual recovery in exports in the second quarter, economic growth was restored (2.7\%), and GDP growth of $1.8 \%$ was reported for the first half-year. The second half of 1999 was characterized by better results: $4.8 \%$ growth in the third quarter, reflecting robust agricultural output.

Final results suggest that rapid response by the real sector to external shocks is the major factor of economic growth under currency board conditions and strong dependence on the world economy. Due to the impossibility of offsetting the adverse effects of international markets through monetary measures, the reaction of the economy depends entirely on real sector and labor market flexibility.

GDP by Final Demand Component

Increased internal demand led to growth in private consumption (households' individual consumption) and investment. During 1999 final consumption grew by $4.7 \%$, attributable primarily to increased household spending ( $5.2 \%$ ) and less to government spending $(4.8 \%)$. Gross fixed capital formation increased both in real ( $25.3 \%$ ) and relative terms: its share in GDP rose from $11.6 \%$ in 1998 to $15.9 \%$ in 1999.

According to expenditure method, GDP structure is characterized by a significant share of final consumption. This is explained by the trade deficit (accounting for $7.8 \%$ of GDP) which has contributed to increased shares of other components. This trend was most clearly pronounced during the first half of 1999 when final consumption comprised approximately $95 \%$ of GDP.

Investment in public sector projects increased during 1999. The physical growth in inventories due to unsold output slowed, signaling a recovery of economic growth. Increased exports during the second half-year were an important factor behind 1999 growth. GDP growth reflects mostly a greater volume of exports and increased gross fixed capital formation.

## Sectoral GDP

 StructureIn respect of supply GDP growth is associated mostly with a marked pickup in services: $5.8 \%$ in real terms. The bulk of GDP growth is attributable to rapidly growing services in the finance, credit and insurance sector ( $44.6 \%$ ) and communications ( $20.7 \%$ ). The slowdown in industrial output continued, showing a decline of $4.4 \%$ in real terms. At constant prices agriculture indicated $0.6 \%$ growth but its share in GDP diminished to $17.3 \%$ due to a $16 \%$ slump in agricultural prices.

SECTORAL GDP STRUCTURE
(gross value added at current prices)

Source: NSI.

## GDP by Origin of Ownership

Preliminary 1999 GDP data indicates positive trends: the share of value added in the private sector increased progressively. This positive effect is all the more welcome since goods and services produced in the private sector increased by $6.4 \%$, while the public sector reported a drop of $6.3 \%$. At current prices private sector gross value added amounted to BGN 12,998.4 million, or $65.3 \%$ of whole-economy gross value added. The private sector in agriculture and forestry accounted for the largest share: approximately $98 \%$. The sizable share of agriculture and forestry is related to the inclusion of smallholdings and garage industries in the methodology of reporting for value added in agriculture. More than $53.3 \%$ of industrial output was produced by the private sector. Services accounted for the largest share in private sector value added (52.3\%).

STRUCTURE OF GROSS VALUE ADDED BY ORIGIN OF OWNERSHIP

Source: NSI.

## Prices

In 1999 inflation measured through the consumer price index reached $6.2 \%$. 1999 is characterized by deflation in the first half-year with the exception of January and price increases in the second half-year. Price movements under a currency board reflected the price dynamics of nontradable goods and services, insufficient foreign capital inflow, changes in feedstock material prices and increased administratively fixed prices.

CONSUMER PRICE DYNAMICS IN 1999
(percentage change)

[^6]Higher inflation during the second half of 1999 was attributable to the appreciation of the US dollar against the Euro and, correspondingly, the Bulgarian lev.

Consumer prices in 1999 grew more than expected. However, due to the fixed exchange rate, a generally low inflation rate was sustained. Price increases until mid-1999, reflecting reduced exports of Bulgarian goods, were attributable mostly to external shocks. Decreased output and slower growth rates in the period under review pertained to low economic growth rates in Europe. Higher international oil prices prompted increases in fuel and transportation services prices in the last 1999 quarter.

State monopolies and government administered prices were the major internal reasons behind the higher inflation rate reported in 1999. Price rises in administered items (thermal and electric energy, fuels, administration services) were responsible for inflation rate growth between July and December 1999. This group of items and services comprises a big share in households' expenditure, and therefore the consumer price index was impacted significantly by their price movements. The CPI reacts immediately to price changes in these items. It is of note that months with increased prices of administered items were characterized by higher inflation. Manufacturers and traders immediately set new prices which helped subdue inflationary impulses. Seasonal movements in some food prices (winter increases) acted as another inflationary factor.

Prices of tradable goods followed international trends. During 1999 certain changes occurred in customs duties and excises. Prices of food and soft drinks, as well as clothing and footwear declined by $4.7 \%$. Prices of other consumer goods picked up: alcoholic drinks and tobacco products: by $22.7 \%$; housing, water, and electricity: by $29.8 \%$; transport: by $16.9 \%$; communications: by $6 \%$; health care: by $13.6 \%$; leisure pursuits: by $12.5 \%$; restaurants and hotels: by $16 \%$. Despite the dramatically increased prices of nontradable goods and services, the significant weight of food in the consumer basket helped keep inflation relatively low.

CONSUMER PRICE INDICES BY COMMODITY GROUP IN 1999 (December $1998=100$ )

Source: NSI.
Reduced domestic consumption (due to low average pay, which remains the major source of households' income) coupled with insufficient inflow of investment were the other factors repressing inflation.

The trade deficit reported in 1999 and the big share of imported goods in consumption did not impact inflation due to the fixed exchange rate and the geographic
structure of imports. The only exception ware imports of oil and gas. Unlike other transition economies, no increases in consumer prices occurred as a result of external capital inflow. Foreign investment was concentrated mainly on privatization. As a result the government was the recipient of funds, rather than the private sector. Tight government spending and foreign debt repayments helped avoid a significant increase in the monetary base as a result of privatization revenue and loans disbursed by international financial institutions (primarily the IMF).

## Employment, Unemployment and Pay

The average number of employees under labor contract was $1,915,491$ persons ${ }^{13}$ in 1999: a decrease of 134,800 , or $6.5 \%$ on 1998 . This decline affected both the public and private sectors. Public sector employment decreased by $9.5 \%$ and private sector employment by $2.3 \%$. This reduction reflects ongoing restructuring of the economy and the closure of a number of state-owned enterprises, particularly in the processing branch where the number of employees fell from 689,748 to 591,555 . Despite the accelerated privatization, public sector employees exceeded those in the private sector by some $12 \%$. The year saw a shift of employees, inter alia, to private sector industry, trade and repair works, transport and communications.

UNEMPLOYMENT IN 1999

Source: NLO.
In the remaining industries the reduced number of public sector jobs was partially offset by the increased number of private sector employees. Private sector dominated industries (by employee numbers) were: agriculture (approximately twothirds), the processing branch, construction, and hotels and catering. The state retained its monopoly on the energy industry and utilities, and a majority interest in the extracting industry $(91 \%)$, transport and communications ( $78 \%$ ), and education and health care.

The number of registered unemployed in labor offices was 610,551 by the end of 1999 , accounting for $15.97 \%$ of the total number of unemployed. Throughout 1999 unemployment gradually increased with an insignificant fall in June. This growth was caused by changes in the system of health insurance effective from mid1999. They prompted unregistered jobless people and persons employed in the gray

[^7]economy to register in labor offices. By comparison the end-1998 unemployment level was $12.17 \%$. The number of employees in the public and private sectors declined by 143,000 since the end of 1998.

During the fourth quarter of 1999 the average monthly salary was BGN 206.21 and if annual bonuses are included, it was BGN 213.42. Average salary growth $(1.47 \%)$ lagged behind inflation in the period under review.

Data on private sector salaries is dubious due to unpaid social security and health insurance contributions. This also accounts for underreporting of the private sector's share in GDP. According to available data highest pay was reported in the energy, gas and water sectors: BGN 427.68; and in finance, credit and insurance: BGN 420.29. Salaries grew in the extracting industry (by 10.8\%) and finance, credit and insurance (by 5.5\%).

SALARIES IN 1999
(BGN)

Source: NLO.
Increased public sector salaries should be considered more as compensation by the government for raised social security and health insurance contributions and less as reflecting increased productivity and real income growth. Data bears this out: two public sector salary increases in 1999 were effected solely by government decisions.

## 3. External Sector

## Balance of Payments

## Current <br> Account

In accordance with preliminary data on imports and exports, the balance of payments current account showed a deficit of USD 659.1 million (5.4\% of GDP) in 1999: an increase of USD 597.6 million on 1998 when a deficit of USD 61.4 million had been reported on the balance of payments current account. This worsening reflected mainly the negative trade balance and smaller net income from services.

Trade balance. According to preliminary data the 1999 trade balance reported a deficit of USD 1,064 million ( $8.7 \%$ of GDP): an increase of USD 683.4 million compared with 1998.

Exports (FOB) declined by $5.4 \%$ (USD 226.3 million) from 1998, reaching USD 3,967.2 million. Imports ( $F O B$ ) totaled USD 5,031.2 million, indicating an increase of $10 \%$ (USD 457 million) on 1998.

## CURRENT ACCOUNT AND TRADE BALANCE IN 1998 (monthly data)

Source: NSI and BNB.

## CURRENT ACCOUNT AND TRADE BALANCE IN 1999 <br> (monthly data)

(million USD)

Source: NSI and BNB.
Services. The balance on services ended in surplus (USD 317.9 million) though it worsened by USD 54.7 million from 1998 when it stood at USD 372.6 million. Net revenue from transportation services was negative (USD -124 million), a decrease by USD 46.5 million compared with 1998 (USD - 77.5 million) mostly attributable to higher imports. Travel revenue declined by $9.2 \%$ (USD 41.2 million) compared with 1998 (USD 447.1 million), reaching USD 405.8 million. ${ }^{14}$ The balance on travel wors-

[^8]ened due to lower tourism revenue in 1999 (by $3.7 \%$ or USD 36.2 million), a result of the decreased number of tourists to Bulgaria, particularly from the former USSR.

Income. In 1999 the balance on the Income item improved (by USD 70.8 million ) from 1998. The credit income, with interest accounting for the biggest share in it, declined by USD 39.9 million from 1998 (from USD 306.7 million to USD 266.8 million) due to the lower income received by the BNB. The amount of debit income, with interest accounting for the biggest share, totaled USD 479.5 million: a decrease of USD 110.7 million on 1998 (USD 590.2 million) due to the smaller amount of interest paid by the government and commercial banks (also a result of lower international market rates during the first half of 1999).

Current transfers. Net revenue from Current transfers in 1999 increased by USD 69.7 million reaching USD 299.7 million against USD 230.1 million in 1998.

Capital Account

Financial Account

In 1999 the balance of payment Capital account reported a deficit of USD -2.4 million due to reporting of the aid granted to Macedonia associated with the Kosovo Conflict.

The balance on the Financial account turned positive (USD 649.5 million), an increase of USD 328.7 million compared with 1998 (USD 266.8 million).

Bulgaria's direct investment abroad during 1999 totaled USD 4.9 million. ${ }^{15}$ According to preliminary data, direct investment into Bulgaria in the period under review amounted to USD 770.4 million ( $6.3 \%$ of GDP), an increase of USD 233.1 million (43.4\%) from 1998 (USD 537.3 million). ${ }^{16}$ In fact, the 1999 current account deficit is entirely covered by direct foreign investment. Portfolio investment by residents abroad increased by USD 207.7 million against USD 129.4 million in $1998 .{ }^{17}$ Commercial banks' investment in long- and short-term debt securities increased most dramatically: by USD 131.9 million and USD 37.2 million respectively. During 1999, portfolio investment in Bulgaria grew by USD 8 million (against a decrease of USD 112 million in 1998), mainly reflecting nonresidents' investment in shortterm debt securities (USD 14.6 million). However, nonresidents' investment in longterm debt securities decreased by USD 8.5 million, primarily because of decreased investment into government securities.

Bulgarian assets invested abroad (Other investment - assets) fell by USD 3.3 million against USD 222.3 million in 1998. Commercial banks' deposits abroad (which comprise a significant portion of Bulgaria's investment abroad) dropped by USD 19.6 million (against a decrease of USD 69.4 million in 1998). Foreign currency deposits by other sectors (Bulgarian companies abroad) rose by USD 76 million (against an increase of USD 26.9 million in 1998). ${ }^{18}$

In 1999 foreign currency deposits by individuals and private companies (Other currency and deposits) ${ }^{19}$ increased by USD 63.6 million (against an increase of USD 155.2 million in 1998), reflecting enhanced public confidence in the banking system.

During the review period Bulgaria's obligations (Other investment - liabilities) rose by USD 80.3 million (against a fall of USD 251.2 million in 1998), mainly as a result of the net growth in disbursed trade credits of USD 79.7 million and the increase in nonresidents' deposits by USD 44.6 million. Despite the decline in total credits disbursed by nonresidents in 1999 (by USD 26.4 million), credit extended to Bulgarian companies in 1999 rose by USD 87.8 million on 1998.

[^9]The overall balance for the review period ran a surplus of USD 86.4 million against a deficit of USD -94.7 million in 1998.

Between January and December 1999 BNB forex reserves grew by USD 517.4 million (changes reflecting valuation adjustment have been excluded). ${ }^{20}$ This growth was mainly a result of commercial banks' net purchases of foreign currency in the amount of USD 455.5 and increased balances on foreign currency accounts of budget organizations (USD 240.6 million). During 1998 BNB forex reserves had grown by USD 460.9 million. Bulgaria's obligations to the International Monetary Fund rose by USD 161.5 million (net) against an increase of USD 129.2 million in 1998.

Exceptional financing provided to Bulgaria in 1999 totaled USD 269.5 million, indicating a fall of USD 156.9 million or $36.8 \%$ compared with 1998 (USD 426.4 million). Exceptional financing in 1999 included loans extended in support of Bulgaria's balance of payments: from the Japanese Export-Import Bank (USD 50.6 million), Sweden (USD 6.2 million), the European Union (USD 40.2 million), and the World Bank under ASAL (USD 76.2 million) and FESAL-2 (USD 95.9 million).

## Foreign Debt and Debt Indicators

## Amount and <br> Structure of <br> Gross Foreign Debt

According to preliminary data, Bulgaria's gross foreign debt (GFD) by endDecember 1999 totaled USD 9,989.3 million: a decrease of USD 270.2 million ( $2.6 \%$ ) compared with end-1998. Bulgaria's reduced foreign debt reflects repayment of USD 711.5 million of debt to the International Investment Bank. During 1999 foreign debt service totaled USD 977.2 million. New credits and deposits disbursed totaled USD 1,168.9 million. As a result of concluded transactions Bulgaria's foreign debt decreased by USD 61.9 million, and as a result of valuation adjustments: by USD 208.3 million.

Between January and December 1999 the net transfer of funds indicated a surplus of USD 191.7 million ( $1.6 \%$ of GDP) against a deficit of USD 115.4 million (0.9\%) in 1998.

## MATURITY STRUCTURE OF GROSS FOREIGN DEBT

|  | 1998 |  | 1999 |  |
| :--- | ---: | ---: | ---: | ---: |
|  | million USD | $\%$ of GFD | million USD | $\%$ of GFD |
| Long-term foreign debt | $9,277.7$ | 90.4 | $9,468.8$ | 94.8 |
|  | 981.8 | 9.6 | 520.5 | 5.2 |
|  | $10,259.5$ | 100.0 | $9,989.3$ | 100.0 |

Source: BNB.
Compared with end-1998, long-term foreign debt increased by USD 191.1 million ( $2.1 \%$ ). This increase is attributable to transactions worth USD 300.8 million, while valuation adjustments prompted a decrease of USD 119.7 million in the longterm debt. Loans disbursed in support of the balance of payments and funds extended under World Bank, European Investment Bank and European Bank for Reconstruction and Development projects contributed significantly to the long-term debt increase. The growth in long-term debt also reflected the assumption of the Mineralbank and Economic Bank debts to the Italian SACE, and of the Mineralbank obligations to Spain, totaling USD 84.9 million.

[^10]
## SCOPE OF GROSS FOREIGN DEBT: Methodological Notes

Data on gross foreign debt reported by the Bulgarian National Bank is summarized in two major groups: government and government guaranteed debt and nonguaranteed debt. The Ministry of Finance provides data on government and government guaranteed debt. Due to methodological differences there is a discrepancy of USD 104.8 million between 1999 foreign debt data by the Ministry of Finance and that of the BNB.

In accordance with international standards and particularly World Bank and other international financial institutions methodology, public foreign debt includes: government debt, local government debt, and obligations of enterprises with $50 \%$ or more state equity (External Debt: Definition, Statistical Coverage and Methodology, The World Bank, IMF, BIS, OECD, Paris, 1988, p. 173). The IMF Balance of Payments Manual (1993) includes the same scope of public foreign debt (paragraphs 85 to 87 ) which provides the required consistency between data on changes in the gross foreign debt of an individual country and balance of payments data

Following these internationally recognized standards, the Bulgarian National Bank adds or subtracts the following to the debt reported by the Ministry of Finance: (1) foreign currency-denominated ZUNK bonds owned by nonresidents (USD 94.6 million by endDecember 1999); and (2) Eurobonds issued by the Metropolitan Municipality, and owned by nonresidents (USD 27.1 million) are added; (3) bonds owned by residents (USD 16.9 million) are excluded from obligations on Brady bonds.

Compared with December 1998 short-term debt declined by USD 461.3 million ( $47 \%$ ), reflecting settlement of the overdue portion of the debt to the International Investment Bank in March (USD 504.3 million by end-February 1999) and renegotiations on overdue obligations by Mineralbank and Economic Bank.

By the end of December 1999 Bulgaria's long-term obligations to official creditors totaled USD 4,044.8 million, increasing just USD 0.9 million on end-1998. Bulgaria's biggest institutional creditors are: the International Monetary Fund ( $12.5 \%$ of gross foreign debt), the World Bank ( $9 \%$ of gross foreign debt), and the European Union ( $4 \%$ of gross foreign debt). Bulgaria's long-term obligations to private creditors totaled USD 5,424 million: an increase of USD 190.2 million ( $3.6 \%$ ) compared with 31 December 1998. The major reasons behind this are, inter alia, the increase of USD 132.8 million ( $106.7 \%$ ) in unsecured debts by Other sectors, and nonresidents' purchases of bonds issued by the Metropolitan Municipality in the amount of USD 27.1 million. ${ }^{21}$

GROSS FOREIGN DEBT STRUCTURE BY CREDITOR

Source: BNB.
${ }^{21}$ EUR 27 million (at the USD exchange rate by end-December 1999).

## Gross Foreign Debt Service

During 1999 gross foreign debt payments totaled USD 977.2 million, including principal payments of USD 496.7 million ( $50.8 \%$ ) and interest payments of USD 480.4 million ( $49.2 \%$ ). Compared with 1998 gross foreign debt payments in 1999 decreased by USD 216.8 million (principal payments fell by USD 167.5 million and interest payments by USD 49.3 million).

GROSS FOREIGN DEBT PAYMENTS IN 1999

|  |  |  | (million USD) |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
| I quarter | II quarter | III quarter | IV quarter | Total |  |
| Principal | 159.0 |  | 61.5 | 184.8 | 91.4 |
| Interest | 222.7 | 36.1 | 181.8 | 39.9 | 480.7 |
| Total | 381.7 | 97.6 | 366.6 | 131.3 | 977.2 |

Source: BNB.
In 1999 foreign debt payments (on long- and short-term loans) to official creditors totaled USD 564.9 million, including USD 370.3 million in principal payments and USD 194.6 million in interest payments. Compared with 1998 the amount of payments to official creditors declined by USD 243.7 million (principal payments declined by USD 198.4 million and interest payments by USD 45.3 million).

Foreign debt repayments to private creditors both on long- and short-term loans totaled USD 412.2 million, including principal repayments of USD 126.4 million and interest repayments of USD 285.8 million.

## Changes in <br> Debt Indicators

The decline in gross foreign debt during 1999 helped improve the ratio of gross foreign debt to gross domestic product from $83.7 \%$ in December 1998 to $81.3 \%$ in December 1999.

As a result of export of goods and nonfactor services declining faster than gross foreign debt, the ratio of gross foreign debt to exports of goods and nonfactor services deteriorated: from $171.5 \%$ in 1998 to $173.7 \%$ in 1999.

The ratio of foreign debt service to gross domestic product improved from 9.7\% to $8 \%$ : the result of lower spending on gross foreign debt service in 1999.

The ratio of foreign debt service to exports of goods and nonfactor services reached $17 \%$ by end -1999 indicating an increase of three percentage points from December 1998, attributable to the greater decline in foreign debt service expenses (by $18.2 \%$ ) than in exports of goods and nonfactor services (by $3.8 \%$ ).

The ratio of short-term debt to gross domestic product improved by 3.8 percentage points: from $8 \%$ by the end of 1998 to $4.2 \%$ by the end of 1999. This is due to settlement of Bulgaria's obligations to the International Investment Bank in March 1999 and repayment of a portion of the obligations of Economic Bank and Mineralbank.

Increased nonresidents' forex deposits coupled with higher residents' obligations on government securities in 1999, slightly affected the ratio of total deposits and government securities held by nonresidents to BNB forex reserves. This ratio rose from $5.5 \%$ in December 1998 to $6.7 \%$ in December 1999.

The ratio of short-term debt to gross foreign debt improved significantly from 1998 reflecting reduced arrears. It fell from $9.6 \%$ in December 1998 to $5.2 \%$ in December 1999.

## DEBT INDICATORS

## Foreign Trade

Between January and June 1999 Bulgaria's foreign trade developed in conditions of falling demand in international markets. The Kosovo Conflict seriously impeded Bulgarian exports to the European Union: Bulgaria's major trade partner. During the second half of 1999 economic activity in the EU picked up and Asian economic growth returned. This caused an upsurge in international commodity markets. Enhanced demand and reduced crude oil extraction resulted in a dramatic price increase. Prices of steel and nonferrous metals rose at a slower rate.

## The Trade Balance

According to preliminary data, the trade balance showed a deficit of USD 1,064 million ( $8.7 \%$ of GDP): an increase of USD 683.3 million compared with 1998. Exports (FOB) reached USD 3,967.2 million, a decrease of $5.4 \%$ (USD 226.3 million) on the same period of 1998. Imports (FOB) grew by 10\% (USD 457 million) on 1998 amounting to USD 5,031.2 million.

FOREIGN TRADE DYNAMICS
(million USD)

Source: Data based on customs declarations provided by the Computing Center Directorate within Information Service AD and the NSI, and adjusted by the BNB for date of customs clearance.

Bulgaria's 1999 exports were governed by reduced demand for raw material feedstocks in international markets during the first half of 1999, the Kosovo Conflict, greater external demand in the last months of 1999, and structural changes in the Bulgarian economy.

PRICES IN INTERNATIONAL COMMODITY MARKETS

| Commodities | Average prices (USD per ton) |  | Change $1999 / 1998$ |  |  |

In 1999 export revenue from raw material feedstocks (with a low value added) declined by $13 \%$ (USD 250.6 million) from 1998 to reach USD 1,684.3 million. Exports of fertilizers (by use) dropped most significantly (by $53.5 \%$ or USD 42.2 million) reflecting progressively falling prices in international markets and structural changes in sector-specific enterprises. Exports of cast-iron, iron and steel dropped dramatically by $33.4 \%$ (USD 131.8 million), textile materials by $27.3 \%$ (USD 51.7 million), and chemicals by $22.9 \%$ (USD 44.4 million). Export growth was reported in the aggregate groups of feedstock for food production: by $29.3 \%$ (USD 43.7 million); tobacco by $24.8 \%$ (USD 12.7 million); cement: by $7.3 \%$ (USD 1.8 million); and wood, paper and cardboard: by $3.8 \%$ (USD 4.7 million).

Compared with 1998 exports of investment goods fell by $10 \%$ (USD 67.3 million) due mostly to lower vehicle exports (down by $49 \%$ or USD 45.2 million). Exports of machines, tools and appliances increased by $8.1 \%$ (USD 16 million) contributing to the smaller overall decline in exported investment goods.

## EXPORT DYNAMICS

| Exports (by use) | Relative share for 1998 (\%) | Contribution to total export change (percentage points) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | I quarter | II quarter | $1999$ <br> III quarter | IV quarter | Total |
| Consumer goods | 31.1 | -1.1 | -1.0 | 4.7 | 0.8 | 0.7 |
| Raw material feedstocks | 46.1 | -13.2 | -16.1 | 0.7 | 5.9 | -6.0 |
| Investment goods | 16.0 | -3.0 | 0.1 | -0.4 | -3.1 | -1.6 |
| Energy resources | 6.7 | -3.0 | 1.8 | 2.2 | 5.0 | 1.4 |
| EXPORTS, TOTAL (FOB) | 100.0 | -20.4 | -15.2 | 7.3 | 8.6 | -5.4 |

Source: Data based on customs declarations provided by the Computing Center Directorate within Information Service AD and the NSI, and adjusted by the BNB for date of customs clearance.

In 1999 exports of consumer goods increased (by $2.4 \%$ or USD 30.9 million), with exports of clothing and footwear, and furniture indicating the biggest growth: $23.6 \%$ (USD 126.2 million) and $13.9 \%$ (USD 12.2 million) respectively. Exports of drinks, cigarettes and food declined dramatically: by $35.8 \%$ (USD 50.8 million), $34 \%$ (USD 19.4 million) and $18.4 \%$ (USD 43.2 million) respectively. To a certain degree this export drop reflects reduced exports to Russia. The devaluated rouble (a result of the 1998 summer forex crisis) and the subsequent dramatic decrease in real public income in Russia resulted in reduced import consumption.

## REAL EXCHANGE RATE

In 1999 the real effective exchange rate devalued by $6.5 \%$ from end- 1998 while exports decreased by $5.4 \%$. Generally, real devaluation of the national currency results in higher export competitiveness and export growth. The paradox was particularly pronounced in the first half of 1999 when the real effective exchange rate devalued by $10.8 \%$ while exports fell by $17.8 \%$ on the first half of 1998. Conversely, in the second half of 1999 total exports (FOB) rose by $7.9 \%$ while the effective exchange rate appreciated by $3.5 \%$ on end-June 1999.

REAL EXCHANGE RATE INDEX
(June $1997=100$ )

* Based on countries' weight in settlements (USD - 75\%, DEM - 20\%, CHF - 5\%)

Source: BNB, NSI and International Financial Statistics.
The decline in Bulgarian exports (and lower export competitiveness) in 1999 cannot be explained merely by fluctuations in the real effective exchange rate through the reporting year. More intensive economic restructuring to increase labor productivity and change the structure of Bulgarian exports is needed for continued improvement of export competitiveness and sustained growth.

Despite the strong decline in exports of electrical energy in 1999 (by $45.3 \%$, USD 52.5 million), exports of energy resources rose (by $21.5 \%$, USD 60.7 million) from 1998, reflecting increased exports of petroleum products (by 75.6\%, USD 116.7 million).

In the context of an overall export decline significant changes evolved in the commodity structure of exports. The share of consumer goods and energy resources increased at the expense of raw material feedstocks and investment goods. While export growth in energy resources is entirely driven by prices, increased exports of consumer goods are also accompanied by structural changes, clearly mapping Bulgaria's competitive positions. At the same time, the fall in exports of raw material feedstocks is another major venue of achieving higher export efficiency in the medium term.

EXPORT STRUCTURE BY USE

Source: Data based on customs declarations provided by the Computing Center Directorate within Information Service AD and the NSI, and adjusted by the BNB for date of customs clearance.

Factors impacting Bulgaria's imports in 1999 were: sharply raised crude oil prices in international markets, price rises in other imported goods (due to higher oil prices), increased external credits to the private sector, increased domestic credit to the private sector, and higher real salaries in this sector.

In 1999 imports of investment goods rose substantially (by 40.2\%, USD 426.3 million) on 1998. Imports of vehicles increased most significantly (by $86.2 \%$, USD 140.7 million). ${ }^{22}$ Imports of machines, tools and appliances also rose substantially (by $56.8 \%$, USD 215.2 million). Import growth in these commodity groups is due to investment, mainly in the private sector, particularly in companies with foreign stakes. This is confirmed by increased bank credit in dollar terms to the private sector (by $16.1 \%$ ) and credit drawings from abroad (a 1.2-fold increase). A significant growth in imports of electrical machines was also reported in 1999 (by 23.6\%, USD 40.4 million).

In 1999 imports of consumer goods grew by $33.1 \%$ (USD 234 million) attributable both to the lower competitiveness of Bulgarian goods in the domestic market and to the structure of the range of products. Imports of automobiles, housing and home furniture, medical goods and cosmetics, and clothing and footwear rose most significantly: by $258.4 \%$ (USD 104.9 million), $60 \%$ (USD 53 million), $29.4 \%$ (USD 38.6 million) and $16.8 \%$ (USD 25.3 million) respectively. At the same time, imports of food, drink and cigarettes dropped, by $13.6 \%$ (USD 25.9 million).

In 1999 imports of raw material feedstocks decreased by $9.6 \%$ (USD 192.7 million) on the previous year. The most significant decline occurred in imports of chemical products ( $44 \%$, USD 125.1 million), ores ( $22.5 \%$, USD 44.4 million), and cast-iron, iron and steel ( $24.6 \%$, USD 29.4 million). The decline in imports of cast-iron, iron and steel in 1999 is attributable to weaker demand for ferrous metals in international markets in the first half of the year. Import growth was reported for the plastics and rubber ( $17.9 \%$, USD 33.3 million) and textiles ( $0.2 \%$, USD 0.9 million) groups.

IMPORT DYNAMICS BY USE IN 1999
(on corresponding month of previous year)

Source: Data based on customs declarations provided by the Computing Center Directorate within Information Service AD and the NSI, and adjusted by the BNB for date of customs clearance.

In 1999 imports of energy resources increased slightly (by $2.5 \%$, USD 30 million) on 1998, entirely reflecting increased imports of crude oil (by $42.5 \%$, USD 221.7 million). This is due both to a $161.1 \%$ rise in crude oil prices in international markets and increased Bulgarian exports of petroleum products (by $75.6 \%$, USD 116.7 million). At the same time, imports of coal and natural gas declined significantly: by $48.2 \%$ (USD 81.4 million) and $18.2 \%$ (USD 58 million) respectively. The decline in natural gas imports is due to lower industrial consumption consistent with downsizing (and phasing out) inefficient manufacture using natural gas as fuel or feedstock and to the high indebtedness of a number of enterprises to Bulgargaz AD.

## Geographic Structure

Exports. External demand in the second half of 1999 increased, consistent with higher growth rates in the eurozone. Bulgaria's high share of exports in GDP ( $32.3 \%$ for 1999 , according to estimates) and the increased share of exports to the European Union (from $50.4 \%$ in 1998 to $52.6 \%$ in 1999) point to a stronger dependence between European Union member countries' growth rates and Bulgaria's export and GDP growth rates. Lower exports to the European Union reflect lower growth rates in EU countries as a whole, as well as lower GDP growth rates in particular Union countries (Germany, Greece and the United Kingdom). Bulgarian exports were affected positively by the end of the Kosovo Conflict. In the second half of 1999 exports to Balkan countries rose markedly, by USD 142.5 million (up $154.6 \%$ ) on the same period in 1998. Weaker demand in Russia and the Ukraine, consistent with their economic problems, had an extremely negative impact on exports.

In 1999 exports to the EU decreased by USD 28.8 million (1.4\%) from 1998. The most significant decrease in exports was to Germany (by USD 52.4 million, $11.7 \%$ ) and Greece (USD 26.2 million, $7.1 \%$ ), mainly attributable to the cast-iron, iron and steel group. A decline in exports to Spain (by USD 13.6 million, 11.2\%) and the United Kingdom (by USD 7.4 million, $6.9 \%$ ) was also reported. Exports to France and Belgium rose (by USD 37.4 million, $26.1 \%$; and USD 25.5 million, $16.8 \%$, respectively).

Exports to the former USSR declined by USD 162.8 million ( $31.3 \%$ ), contributing most significantly to Bulgaria's overall decline in exports (71.9\%) in 1999.

GEOGRAPHIC STRUCTURE OF EXPORTS

Source: Data based on customs declarations provided by the Computing Center Directorate within Information Service AD and the NSI, and adjusted by the BNB for date of customs clearance.

In 1999 exports to Russia decreased by USD 34.3 million (15.4\%) from 1998. As a result, Russia's share in overall exports contracted, from $5.3 \%$ in 1998 to $4.8 \%$ in 1999. The decline in exports to Russia is due both to the lower competitiveness of exported goods (coupled with a rouble devaluating continuously since August 1998) and the steps taken by the Russian government to reduce imports. A decline in exports was reported for the following groups: miscellaneous foods (by USD 12.7 million, $84.7 \%$ ), tobacco and processed substitutes (by USD 10 million, $46.1 \%$ ) and pharmaceuticals (by USD 6.9 million, $23.0 \%$ ). Exports to the Ukraine also decreased (by USD 40.9 million, $37.8 \%$ ), mainly attributable to the mineral fuels, mineral oils and distilled products and soft and alcoholic drinks groups. Exports to Georgia declined dramatically (by USD 28.2 million, $40.9 \%$ ).

In 1999 exports to the group of Other OECD countries declined by USD 17.3 million ( $3.4 \%$ ) from 1998. Exports to Turkey fell most dramatically (by USD 47.1 million, $14.1 \%$ ) in the reporting year, mainly due to decreased exports of copper and copper products and organic chemical products. Exports to the USA rose substantially (by USD 35.7 million, $32.3 \%$ ) mainly due to exports of tobacco and processed tobacco substitutes and other mineral feedstock.

In 1999 exports to CEFTA countries dropped by USD 37.6 million (18.1\%), most dramatically to Poland (by USD 25.3 million, $46.2 \%$ ) due to drastically decreased vessel exports (by USD 26.9 million, 100\%). Exports to Slovakia declined (by USD 13.8 million, $63.4 \%$ ) associated with the introduction of an additional import charge. Exports to Hungary also decreased (by USD 7.9 million, 24.2\%), while exports to Slovenia and Romania increased: by USD 4.7 million ( $14.4 \%$ ) and USD 4.9 million ( $9.8 \%$ ) respectively.

In 1999 exports to Balkan countries rose by USD 122.4 million ( $63.5 \%$ ) from 1998. Exports to Yugoslavia rose substantially (by USD 85.4 million, 109.8\%) due to exports of mineral fuels, mineral oils and distilled products. Exports to Macedonia posted a significant increase (by USD 28.9 million, 37.8\%).

The 1997 crisis in Southeast Asia ${ }^{23}$ and devaluation of local currencies there reflected on reduced exports to these countries (by USD 13.8 million, $45 \%$ ).

Imports. Imports from the European Union rose by USD 419.5 million ( $18.7 \%$ ) for the whole of 1999. As a result, the EU's share in Bulgaria's imports increased to $48.7 \%$ from $45.2 \%$ in 1998. This reflects fixed exchange rates of the lev against the eurozone currencies on the one hand, and the nominal lev devaluation against the US dollar in 1999 (by $16.2 \%$ ), on the other. Cheaper imports (in lev terms) from eurozone countries prompted import shifts. The latter is also evident from the increased share of eurozone countries' currencies used in import payments (from $40.2 \%$ in 1998 to $46.4 \%$ in 1999) and the reduced share of the US dollar (from $53.9 \%$ in 1998 to $47.5 \%$ in 1999). In 1999 imports from Germany grew most substantially (by USD 128.6 million, $18.7 \%$ ), mainly due to the automobile transport and nuclear reactors, boilers, machines and appliances groups. Imports from Italy also rose (by USD 82 million, $21.6 \%$ ) attributable to the nuclear reactors, boilers, machines and appliances and cast-iron, iron and steel groups. Imports from the following countries also increased from a year earlier: France (by USD 63 million, $28.2 \%$ ), Sweden (by USD 23.2 million, $44.7 \%$ ), and Austria (by USD 22 million, $15.5 \%)$.

In 1999 imports from the former USSR rose on 1998 by USD 51.5 million (4.2\%).

Significantly higher crude oil prices (particularly in the second half of 1999) led to an increase in imports from Russia during the review period (by USD 231.1 million, $48.6 \%$ ). This contributed to an overall increase in imports from this country for 1999 as a whole (by USD 100.1 million, $9.8 \%$ ). Increased imports from Russia are due mostly to the following commodity groups: mineral fuels, mineral oils and distilled products and nuclear reactors, boilers, machines and appliances. Imports from the Ukraine dropped on 1998 (by USD 45.3 million, 25.6\%).

Bulgarian association to CEFTA in early 1999 and customs duty exemption on approximately $80 \%$ of trade with CEFTA members contributed significantly to increased imports from them: by USD 73.9 million ( $26.9 \%$ ) from 1998. Imports from Poland rose most substantially (by USD 32.7 million, $79.2 \%$ ) due to the nuclear reactors, boilers, machines and appliances group. Imports from Hungary and Romania also increased: by USD 13.4 million ( $36.7 \%$ ) and USD 14.5 million ( $25.2 \%$ ) respectively.

In 1999 imports from Other OECD countries rose by USD 17.8 million (4.4\%). Imports from Turkey rose most significantly (by USD 44.6 million, $36.5 \%$ ) associated with reduced customs duties on a great number of goods under the commercial free trade agreement with Turkey effective as of 1 January 1999. By commodity group, this is ascribable to increased imports of plastics and plastic products

[^12]and soaps and detergents. However, imports from the USA dropped (by USD 29 million, $14.4 \%$ ), mainly attributable to the group of mineral fuels, mineral oils and distilled products.

In 1999 imports from Balkan countries decreased from 1998, by USD 33.9 million (44.2\%), reflecting reduced imports from Yugoslavia (by USD 19.1 million, $55.3 \%$ ) and Macedonia (by USD 11.1 million, $30.8 \%$ ).

In the reporting year imports from Southeast Asia rose substantially (by USD 39.1 million, $46.9 \%$ ) at the expense of the automobile transport group (by USD 29.1 million, $139.6 \%$ ). Moreover, this may reflect the higher competitiveness of goods from the region consistent with devaluation of these countries' currencies following the 1997 crisis.

GEOGRAPHIC STRUCTURE OF IMPORTS

## 4. Monetary Sector

The year under review, 1999, is the second full calendar year after the introduction of the currency board in Bulgaria. The general trend of financial stabilization and remonetization of the national economy, established after the radical change in the monetary regime, continued. A comparison of the dynamics of major monetary and credit aggregates for 1999 with those for 1998 makes it possible to outline the stabilizing role of the currency board for the banking sector. Expectations that real monetary and credit growth, key indicators of the monetization of the economy, would continue, though at a slower pace, was confirmed. This is quite understandable in the context of ongoing structural reform in the real sector, in combination with external factors reflecting the balance of payments dynamics, and internal events such as the redenomination of the Bulgarian lev. The latter may be viewed as a test of confidence in the national currency and the monetary regime, which was successfully passed but caused certain fluctuations in monetary aggregates dynamics in the first half of the review year.

## Monetary Aggregates

In 1999 the BNB continued operating under a currency board regime and did not resort to the legally mandated function of lender of last resort in case of financial crisis. In this setting money supply, measured through the broadest monetary aggregate M3, including currency outside banks and all types of deposits, was entirely governed by economic agents' demand for money. In 1999 broad money rose by BGN 753.9 million, or $11.4 \%$ in nominal terms. Taking into account annual inflation, money supply grew by $4.9 \%$ in real terms. Although real money supply growth is lower than that posted in 1998 ( $8.5 \%$ ), it indicates ongoing revival of money demand driven by economic growth and strengthened confidence in the lev and banks.

MONETARY AGGREGATES DYNAMICS IN 1999

Source: BNB.
Broad money growth is prompted by lev component growth amounting to BGN 462.5 million, or $5 \%$ in real terms. Forex component growth is entirely attributable to the euro's devaluation against the US dollar, causing the Bulgarian lev's devaluation because of the fixed exchange rate. In dollar terms, even the forex component of broad money declined by USD 65.7 million, or $4.3 \%$. Reported data does not suggest currency substitution but rather gives grounds for assuming economic agents' preference for the national currency. By comparison, in 1998 forex component growth in dollar terms was USD 65.6 million.

In contrast with 1998, in 1999 the most liquid monetary aggregate M1, including currency outside banks and demand deposits, contributed less markedly to money supply growth. In absolute terms M1 growth was BGN 241 million and accounted for $52 \%$ of lev component growth. In real terms it grew by $2.4 \%$, or 18 percentage points less than in 1998. During the review year dynamics of the two M1 components diverged: currency outside banks increased by $5.8 \%$ in real terms and demand deposits decreased by $3.5 \%$. Data indicates economic agents' ongoing preference for cash, which reflects not only the minor scale of automated payments but also the lingering motive to conceal transactions, mostly to evade tax. In this sense, the redenomination of the lev in midyear helped only temporarily reduce currency outside banks, by $15.1 \%$ at end-June, which reversed to a $32.3 \%$ growth at the end of the year.

Source: BNB.
In 1999 M2 monetary aggregate, including M1 and quasi-money, grew by BGN 733.4 million, or $5.3 \%$ in real terms. The increase in quasi-money, including savings and time deposits in levs and foreign currency deposits, accounted for BGN 492.4 million, exceeding overall M2 growth by 2.4 percentage points. Within quasi-money, the lev component grew most, by $15.7 \%$ in real terms, with newly deposited funds being directed both to time and savings deposits. The public accounted for the largest share: a BGN 153.6 million growth in time and savings deposits ( $9.5 \%$ in real terms), followed by companies: BGN 83.6 million for stateowned and BGN 33.3 million for private. Foreign currency deposits in dollar terms declined by USD 68.8 million. Their dynamics by sector diverged. The public's funds rose by USD 46.2 million ( $5.5 \%$ ) while companies' funds decreased: by USD 13 million (4.6\%) for private and USD 91.7 million (39.5\%) for state-owned. Quasi-money growth, the public's deposits in particular, provided additional credit resources, which are an indispensable condition for credit expansion. At the same time, these cannot be considered sufficient as commercial banks' lending policies are determined by their estimates of the risk in the real sector.

In 1999 the methodology of reporting monetary aggregates of banks in liquidation was modified. In accordance with international financial statistical standards their monetary aggregates were further segregated from those of operating banks. To this end, deposits with banks in liquidation were excluded from the more liquid M1 and M2 monetary aggregates and transferred into a specifically defined monetary aggregate, 'deposits of banks in liquidation,' with the lowest liquidity within the M3 monetary aggregate. Also, in segregating deposits of banks in liquidation into a separate column, again for comparability of time series, adjustment was carried back to its beginning in December 1997. The change accounted for some BGN 150 million (about $2 \%$ of broad money). It did not affect the level of money supply but rather its structure and M1 and M2 monetary aggregates.

During the reporting year reserve money dynamics and the process of money multiplication continued without the central bank's active intervention. Under currency board arrangement the BNB did not affect reserve money inasmuch as the level of minimum required reserves was preserved and commercial banks were not refinanced. In 1999 the M0 monetary aggregate (reserve money), including bank reserves and currency outside banks, grew by BGN 334.3 million, or $14 \%$. Reserve money growth is 2.6 percentage points higher than the nominal growth of broad
money and is entirely attributable to the preferences of commercial banks, companies and the public. For the same period the money multiplier, reflecting the ratio between money supply and reserve money, declined from 2.76 in 1998 year-end to 2.70 a year later. The money multiplier decline is accounted for by a growth in currency outside banks to deposits ratio from $35.9 \%$ to $36.3 \%$ and a growth in bank reserves to deposits ratio from $13.3 \%$ to $14.2 \%$. The former is the result of corporate and public propensity to keep cash instead of depositing it with banks, and the latter reflects banks' preference for depositing money with the BNB.

MONEY MULTIPLIER IN 1999

Source: BNB.
RESERVE MONEY AND MONEY MULTIPLIER*

|  | XII'98 | VI'99 | XII'99 |
| :--- | ---: | ---: | ---: |
| Broad money (million BGN) |  |  |  |
| Reserve money (million BGN) | $6,597.2$ | $6,183.6$ | $7,351.1$ |
| Money multiplier | $2,387.4$ | $2,163.0$ | $2,721.7$ |
| Currency outside banks/deposits (\%) | 2.76 | 2.86 | 2.70 |
| Bank reserves/deposits (\%) | 35.9 | 31.4 | 36.3 |

* In redenominated levs.

Source: BNB.
For the full 1999 broad money dynamics reflected reserve money dynamics, with money multiplier partially offsetting the impact of reserve money both in the first and second halves of the year. In the first half money supply declined under the impact of reserve money, despite the countering effect of the growing multiplier. In the second half broad money dynamics reversed: broad money growth reflected reserve money growth while money multiplier acted in the opposite direction.

BROAD MONEY CHANGE IN 1999

|  |  | (million BGN) |
| :--- | :---: | :---: |
| Broad money change driven by: | Jan. - June | July - Dec. |
| - reserve money | -413.6 | $1,167.5$ |
| - money multiplier | -620.1 | $1,597.2$ |
| - both factors | 227.9 | -341.5 |
| Broad money change driven by | -21.4 | -88.2 |
| reserve money source: | -620.1 | $1,597.2$ |
| - net foreign assets | $-1,112.0$ | $2,367.1$ |
| $\quad$ incl. forex reserves | 118.3 | $3,173.0$ |
| - net domestic assets | 491.9 | -769.9 |
| incl. net claims on government | -13.3 | -582.1 |
| - claims on banks | -29.0 | -49.7 |

Source: BNB.
The analysis by source shows that broad money change driven by reserve money change is entirely attributable to net foreign assets of the central bank. Under a currency board these are closely dependent on forex reserves which are determined by BNB net forex purchases and net foreign financing on the one hand, and privatization receipts deposited by the government with the BNB on the other. In the first half of 1999 net foreign assets decreased, causing a decrease in reserve money and money supply. However, for the same period forex reserves increased slightly, at the expense of official financing. The latter entirely offset the decrease in forex reserves prompted by a seasonal fall in demand for cash, which intensified just prior to redenomination of the lev. In the second half dynamics reversed: broad money growth driven by reserve money growth was entirely related to growth in net foreign assets and a further increase in forex reserves. The change in BNB net domestic assets was negligible. The decrease in net claims on the government had a dampening effect on reserve money on the one hand, while the increase in the net deposit of the government with the BNB contributed to a growth in forex reserves. The BNB's decreasing claims on commercial banks as a result of partial repayments by some banks in liquidation had a similar effect.

## Credit Aggregates

As in 1998, domestic credit dynamics did not match money supply dynamics but lagged far behind it. While broad money rose by over BGN 750 million, domestic credit of operating banks grew by only $15 \%$ (BGN 116.9 million), or BGN 10.2 million if the banks under liquidation are taken in account. Nevertheless, claims on the nongovernment sector grew faster at the expense of a further decline in net claims on the government. In 1999 the latter decreased by BGN 395.2 million in operating banks and in combination with overall domestic credit growth contributed to a BGN 512.1 million growth in claims on the real sector, or $21.5 \%$ in nominal terms and $14.4 \%$ in real terms. Over the same period net foreign assets of operating banks declined in dollar terms by USD 54 million, but this cannot be assumed to be a steady return of funds for credit expansion. Therefore, the relatively improved monetary environment reflecting noninflationary real growth of money supply, in combination with net depositing of funds with the banking system by the government, is capable of ensuring sufficient credit resources for real growth in lending to the national economy. Whether credit resources will be utilized for lending to the real sector depends to a large extent on commercial banks' lending policies, which take into account the viability of specific projects and the general level of risk in the country.

Source: BNB.
As in the previous year, in 1999 operating banks' claims on the nongovernment sector increased, entirely attributable to reported lev component growth of BGN 295.6 million, or $13.3 \%$ in real terms. The forex component grew by BGN 217 million in nominal terms mostly due to the lev (and euro) devaluation against the US dollar; in dollar terms it grew by only USD 34 million, or $6.2 \%$. The process of directing new credits mainly to the private sector continued due to the combination of two factors: continued private sector expansion through privatization and company launches, and improved private sector viability related to submission of an increased number of creditworthy projects. In 1999 banks' claims on state enterprises declined by BGN 164.8 million, or one-third in real terms. For private companies a growth of BGN 622.6 million, or $38.6 \%$ occurred. This growth is mainly attributable to lev component growth of BGN 369.7 million, or $43.3 \%$ in real terms, while forex component growth in dollar terms was USD 78.9 million, or $21.6 \%$. Faster growth of credits to private companies, the lev component in particular, may be considered an indirect indicator of confidence in the national currency both from commercial banks and their major clients. In contrast with 1998, in the review year banks' claims on the public grew by only BGN 49.4 million, or $3.9 \%$ in real terms. Data indicates that the trend of a moderate increase in this indicator, started in mid1998 following the robust credit expansion in the second half of 1997 and the first half of 1998 , has been preserved. There is no ground to assume that the public's demand for credit has subsided substantially in comparison with the first year after currency board introduction. The decisive factors, however, are: available free funds and such credits' share in commercial banks' portfolios (especially that of DSK Bank which remained the main public lender).

DOMESTIC CREDIT STRUCTURE

Source: BNB.

Scale of Monetization

In 1999 the scale of monetization of the national economy, measured through the ratios of broad money to GDP and broad money to credit to the real sector, continued increasing. The upward trend started after the launch of the currency board and reflects reviving confidence in the national currency and the banks following the severe financial crisis in 1996 and early 1997. However, it should be noted that this is a slow process and after more than two years of macroeconomic and financial stability the scale of monetization attained is still well below the precrisis level. Data for 1999 shows an increase in the ratio of money supply to GDP from $30.6 \%$ for 1998 to $32.7 \%$ in 1999 , and an increase in the ratio of credit to the real sector to GDP from $17.2 \%$ to $18.1 \%$. A brief comparison with other countries with currency board monetary regimes and/or invitations to negotiate for EU accession makes it possible to assess Bulgaria's place in terms of monetization. According to the money supply/GDP indicator Bulgaria does not differ considerably from countries with currency boards such as Argentina and Estonia, and from some countries negotiating for EU accession such as Romania. According to this indicator, Bulgaria's scale of monetization is higher than that in Lithuania but lower than that in Poland. According to the claims on the real sector/GDP indicator, Bulgaria is closest to Romania, monetization is higher than in Lithuania but lower than in Argentina, Estonia and Poland. In general, the lower value of this ratio for Bulgaria reflects both moderately conservative commercial bank lending policies and the still high risk in the real sector consistent with its delayed restructuring.

SCALE OF MONETIZATION
(\%)

| Country | Year | Money supply/GDP | Claims on real sector/GDP |
| :--- | :---: | :---: | :---: |
| Bulgaria | 1999 | 32.7 | 18.1 |
| Bulgaria | 1998 | 30.6 | 17.2 |
| Argentina | 1998 | 28.7 | 23.6 |
| Estonia | 1998 | 28.4 | 34.2 |
| Lithuania | 1998 | 19.4 | 12.3 |
| Poland | 1998 | 47.0 | 29.7 |
| Romania | 1998 | 27.4 | 17.4 |

[^13]Interest Rates on Commercial Bank Operations

The downward trend in the base interest rate has continued for the last two years and the methodology of its setting has remained unchanged.

|  | 1998 | 1999 |
| :--- | :--- | :--- |
| Average annual base interest rate | 5.35 | 4.68 |
| Average annual interest rate in the interbank market | 2.59 | 2.95 |

Source: BNB.

Interests rates on commercial bank operations in the interbank lev market in 1999 - time deposits and repo agreements - are well below base rate except for lev deposits extended for a term of over 30 days for November and December. The same trend evolved in 1998, when a deviation from the level of the average annual base interest rate was reported for an insignificant number of transactions for a term of over 30 days (for September and November).

The deviation of the average interest rate in the lev interbank market is indicative of available free lev funds, good liquidity of commercial banks and absent possibility of a liquidity risk for the system in the short run.

Average interest rates on interbank time deposits in foreign currency are as follows: $2.95 \%$ for DEM-denominated deposits, 3\% for EUR-denominated deposits and $5.47 \%$ for USD-denominated deposits.

INTEREST RATES APPLIED BY COMMERCIAL BANKS ON NEW SHORT-TERM CREDITS AND ONE-MONTH DEPOSITS IN LEVS

|  |  | (\%) |
| :--- | ---: | ---: |
|  | 1998 |  |
| Nominal annual interest rates on commercial bank short-term credits | 14.14 | 13.56 |
| Real annual interest rates on commercial bank short-term credits | 13.07 | 6.98 |
| Nominal annual interest rates on commercial bank one-month deposits | 3.04 | 3.26 |
| Real annual interest rates on commercial bank one-month deposits | 2.06 | -2.72 |

Source: BNB.
Interest rates applied by commercial banks on new short-term credits and onemonth deposits in levs in 1999 do not differ significantly from those in 1998 as a source of income formation for banks.

Interest-bearing assets, which form commercial banks' interest incomes, cover mainly claims on banks and other financial institutions and account for the biggest share in the structure of financial assets, including interbank indebtedness within the country. The share of claims on foreign banks and other financial institutions makes up $31 \%$ of total asset value and the share of credits to the nonfinancial sector accounts for $33 \%$.

Currency in circulation. At the end of 1999 currency in circulation, including currency in the vaults of commercial banks and outside them, reached BGN 2,083 million, with banknotes and coins issued in 1999 accounting for BGN 2,019 million, or $97 \%$ of currency in circulation. At the end of the first half of 1999 currency in circulation decreased by BGN 258 million compared with end-1998 as the public and companies disposed of a portion of their free cash prior to redenomination. At the end of 1999 currency in circulation rose by BGN 238 million compared with end-1998, or $13 \%$. The ratio of currency in circulation to broad money remained unchanged from 1998 (28\%).

Cash in commercial banks' vaults amounted to BGN 122 million by end-1999 against BGN 103 million by end-1998.

## CURRENCY IN CIRCULATION

(outside BNB vaults)

Source: BNB.
Denomination composition. Of the new banknote denominations 161 million were put into circulation with a nominal value of BGN 2,003 million. Prior to lev redenomination banknotes numbered 300 million, a decrease of 139 million by the end of 1999. This is mainly due to withdrawal of banknotes of lower denominations, which were replaced with coins after the redenomination.

At the end of 1999 coins comprised $1.1 \%$ of currency in circulation based on values. Of the new coin denominations, 143 million coins were put into circulation with a nominal value of BGN 17 million.

The denomination structure of banknotes and coins improved and optimized considerably once lev redenomination was completed.

DENOMINATION COMPOSITION OF CIRCULATING BANKNOTES

Source: BNB.

Commemorative coin issue. In 1999 the BNB put the following commemorative coins into circulation:

| Name of coin | Issue | Nominal <br> value <br> (levs) | Metal | Circulation <br> date | Mintage <br> (number) | Sold in <br> 1999 <br> (number) |
| :--- | :---: | ---: | ---: | ---: | ---: | ---: |

## 5. Fiscal Sector

## Republican

 BudgetThe central republican budget reported a cash surplus of BGN 410,984,100 as of 31 December 1999. Revenues exceeded legal projection by $6.3 \%$, entirely due to an $88 \%$ increase in nontax revenues, against a BGN $285,770,000$ projection. This reflects imposition of higher charges, including reporting the bulk of them as revenues of specific ministries and other government agencies after closure of extrabudgetary accounts and funds.

Lower direct tax rates did not reflect on tax revenue performance, in part due to their small share in total revenues and to partial execution of budget revenues under the Law on Taxation of Individual Incomes ( $94.6 \%$ ). These results are consistent with insignificant declared salary increases in the private sector due to the abovementioned reasons. As salary increases in the public sector are administratively controlled, revenues under the LTII can be projected more precisely, while nonexecution of total revenues is due to overestimated expectations of the finance ministry about the private sector (for legalization of incomes), hence a significant portion of incomes was not captured by the tax system. Also, customs duty revenues did not match projection $(59.3 \%)$, partly due to a change in the range of imported products, and to implementation of free trade agreements.

Noninterest expenditures of the republican budget comprised $81.3 \%$ of total expenditures. This is attributable to lower expenditures made than the projected $89.8 \%$. The decrease is substantial for interest expenditures: overall execution accounted for $75 \%$ of projection, including $78 \%$ external interest execution and $67 \%$ internal interest execution. Lower interest rates on government securities and negative net issues in combination with high bank liquidity are the factors contributing to a cheap domestic government debt service. This reflected on higher figures for primary and internal surpluses than the legally provided ones.

The cash surplus reflected on a negative internal financing of about BGN 966 million. Operations with abroad (net) accounted for BGN 65 million and privatization receipts totaled BGN 489 million, or $128 \%$ of projection.

In 1999 a step-by-step introduction of the system of the unified budget account commenced. Commercial banks' budgetary service functions were limited to transit accounts, which are closed on a daily basis and residual balances carried over to the BNB. This is aimed to consolidate budgetary and extrabudgetary funds in levs and foreign currency to ensure better control over payments through setting limits on accounts within the system and provide for better monitoring, planning and analysis of budgetary cash flows. Moreover, this involves closure of extrabudgetary accounts, with balances on the accounts of the State Fund for Reconstruction and Development, the Energy Resources Fund and the Special Fund for State Protection of Deposits and Accounts of Individuals with Commercial Banks in Respect of Which the BNB Has Petitioned the Institution of Bankruptcy Proceedings being carried over as transfers. This exercise helped improve execution of government authorities' budgets.

## Consolidated Budget

According to preliminary Ministry of Finance data, revenues on the consolidated state budget amounted to BGN $9,678.4$ million, or $10.3 \%$ over projection. Tax revenues (also including social security contributions) comprised $77 \%$ of total revenues. Execution of tax revenues was close to the legally set projections (tax collection of customs duties was just $60 \%$ but their share is too small to have a significant effect). Expenditures of the consolidated budget totaled BGN 9,901 million. Interest expenditures amounted to BGN 898.3 million, including BGN 207.9 million on domestic debt service. The primary surplus on the consolidated budget was BGN 675.4 million.

END-OF-MONTH BUDGET DEFICIT FINANCING
(million BGN)

Source: MF and BNB.
The deficit on the consolidated budget for 1999 accounted for BGN 222.6 million, or $0.6 \%$ of GDP projection. Net foreign financing was BGN 283 million. IMF financing of the budget is reported under internal financing as liabilities to the BNB. Between 31 December 1998 and 31 December 1999 these rose by BGN 547 million (part of this increase is due to valuation adjustments), while the government's deposit with the Issue Department balance sheet grew by BGN 745 million.

In 1999 repayments to the IMF through the BNB amounted to BGN 226 million, and credits received totaled BGN 533 million, a net increase of BGN 307 million. Privatization receipts used to cover the deficit on the consolidated budget amounted to BGN 522 million (the difference with privatization receipts used to cover the deficit on the republican budget results from a portion of these funds being deposited with extrabudgetary accounts). These revenues contributed to higher government deposits with the BNB. Given the lower growth in liabilities to the BNB than the deposit's growth as a result of privatization receipts, the absolute increase of the government's negative net exposure to the BNB is quite understandable: BGN 198 million (at end-1999 it was BGN - 490 million against BGN - 292 million at end-1998). Therefore privatization receipts helped cover the deficit on the consolidated budget to a great extent.

Within internal financing, only the net item to the BNB is positive, under which liabilities to the IMF are reported: an increase of BGN 307 million. Negative are the net issue of government securities (BGN - 312 million) and changes in deposits, i.e. funds on government accounts grew by BGN 592.2 million at the end of 1999.

Above data shows that the government opted for external loans (chiefly from the IMF) and privatization receipts (which should be considered an easy but limited source of funds) as the main sources of budget deficit financing. This reflected on the profitability of commercial banks with large portfolios of government securities because of the low interest rates consistent with a limited number of new issues.

Fiscal Reserves

Fiscal reserves are the sum total of the government's deposits with the BNB and residual balances at commercial banks. Fiscal reserve dynamics is determined by government revenues and expenditures, external loans drawn and external obligations repaid, net issues of government securities and tax revenue dynamics. Fiscal reserves at the central bank comprised $99 \%$ of total fiscal reserves at the end of 1999. Centralization of extrabudgetary funds and a gradual transition to a unified budget account helped reduce budget funds at commercial banks.

As the bulk of fiscal reserves are included in the Issue Department balance sheet, changes in fiscal reserves affect directly the total value of currency board assets and the restructuring in the Issue Department liabilities.

FISCAL RESERVES IN 1999
(million BGN)

Source: BNB and MF.
Data for 1999 shows a growth in fiscal reserves over the reporting year. Fiscal reserves declined in July, consistent with payments on Brady bonds. Funds of the republican budget within fiscal reserves followed a clearly set pattern: decreasing in January and July reflecting external debt payments and growing in the remaining months. A factor for the increase in fiscal reserves is the inclusion of social security funds, which grew by over BGN 100 million during the review period.

## Domestic

 DebtIn 1999 domestic government debt rose by $8.4 \%$ in nominal terms, combined with certain structural changes. Direct government debt to the BNB under Article 45 of the Law on the BNB rose in absolute terms (by $32.25 \%$ in lev equivalent) as a result of the higher SDR exchange rate and increased use of IMF loans. Estimated in SDR, direct debt to the BNB grew by $16.7 \%$.

DOMESTIC GOVERNMENT DEBT

|  | XII'98 <br> (million BGN) | Share <br> $(\%)$ | XII'99 <br> $($ million BGN $)$ | Share <br> $(\%)$ |
| :--- | :---: | :---: | :---: | :---: |
| Government securities for <br> budget deficit financing | 749.9 | 15.7 | 804.7 | 15.6 |
| Direct debt to the BNB <br> Government securities for | $1,665.9$ | 34.9 | $2,203.1$ | 42.6 |
| structural reform | $1,512.2$ | 31.7 | $1,141.7$ | 22.1 |
| Euro-denominated government <br> bonds under RBSBL for 1999 | 0 | 0 | 96.8 | 1.9 |
| Total government debt <br> Government-guaranteed debt | $3,928.1$ | 82.4 | $4,246.4$ | 82.2 |
| Total domestic debt | 839.5 | 17.6 | 920.1 | 17.8 |

Source: MF
Growth occurred among all items with the exception of government securities issued for structural reform: a decrease of $25 \%$. This made up for the increase in government securities for budget deficit financing ( $7.32 \%$ ) as these had a smaller share in total government debt and grew less. As a result, the net issue of government securities in 1999 was negative and was issued at higher prices, hence lower yield, which relieved the burden on the government budget. The finance ministry opted for government securities with longer maturity. The average weighted maturity of government securities for budget deficit financing was one year and nine months.

Euro-denominated government bonds pursuant to § 10 of the Transitional and Final Provisions of the 1999 State Budget Law of the Republic of Bulgaria introduced a new element to government debt. These were issued to optimize debt service: for repurchase of Bulgaria's external and internal obligations, provided the government budget would not increase. Their value amounted to BGN 96,817,000, or $1.87 \%$ of total domestic debt. The issues are four in number, maturing in nine, 15,22 months and 20 years.

Expenditures for domestic debt service as of 31 December 1999 totaled BGN 53,760,100 on government securities for budget deficit financing; BGN 76,791,000 on government securities for structural reform, BGN 72,169,000 on direct debt to the BNB and BGN 48,100 on government-guaranteed debt.

## Government Budget Foreign Debt

Government foreign debt at the end of 1999 reached USD 9,060.14 million. ${ }^{24}$

|  | XII'98 <br> (million USD) | XII'99 <br> (million USD) | Change <br> $(\%)$ |

Source: BNB.

[^14]In the year under review foreign debt payments of USD 860.7 million were made, including USD 406.4 million in principal repayments and USD 454.3 million in interest repayments. This comprised $7.61 \%$ of GDP for 1999. By creditor, these were distributed as follows: USD 259 million on Brady bonds, USD 165.5 million in principal repayments and USD 51.5 million in interest repayments to the Paris Club, USD 124 million in principal repayments and USD 39.5 million in interest repayments to the IMF. Projected repayments for 2000 are USD 885.2 million, excluding new external financing.

Debt growth in December 1999 (USD 304.6 million) is attributable to inclusion of the obligations of Economic Bank and Mineralbank into the government debt, as well as to valuation adjustments.

In absolute terms, the foreign debt measured in US dollars decreased by $2 \%$ on December 1998, but it grew as a share in GDP, reflecting valuation adjustments. The decrease is due to Bulgaria's exposure to the Paris Club. Borrowings from the IMF and the World Bank increased.
III. Foreign Exchange Reserves Management

## 1. Management Strategy

## Investment Policy

Foreign exchange reserves management investment policy reflected the stipulated restrictions in the Law on the BNB, investment goals, and market risk assessment in 1999. The restrictions in the Law on the BNB establish major objectives and the general risk framework in foreign exchange reserves management. The goal pursued by the Treasury in 1999 was to maintain foreign reserves liquidity which enabled the BNB to buy and sell euro against levs without limit within Bulgaria.

Investment restrictions associated with foreign exchange reserves management may be grouped as follows:

- foreign exchange risk: there is a list of instruments in which the BNB may invest under the provisions of the Law on the BNB and namely that the value of foreign exchange assets shall not deviate by more than $2 \%$ from the total amount of foreign exchange liabilities;
- country risk: a list of countries in whose currencies the BNB may invest;
- credit risk: a set of rules interpreting credit ratings determined by credit rating agencies; a list of approved credit rating agencies used by the BNB in the assessment of credit risk; a set of rules for determining maximum credit exposure based on credit rating;
- bank risk: a total limit of bank exposure in time deposits, a list of banks and maximum BNB exposure with each of them; other transactions: a list of banks with whom the BNB may conduct particular transactions;
- market risk: interest rate risk is considered a major element of market risk; to limit interest rate risk the portfolio's duration was modified by determining a neutral-risk duration and admissible departures from it; new benchmarks for foreign exchange assets both in euro and US dollars were developed, effective as of 1 April 1999 (a benchmark is a model portfolio of securities providing neutral risk positions in assets management, including duration);
- liquidity risk: setting limits on excess liquidity assets; amount and quality specifications for securities issues into which the BNB may invest;
- operations risk: internal rules for Treasury operations, control over transactions; regular accounting.

Market Positioning of Foreign Assets

In 1999 portfolio management was affected by the following factors: central banks' interest rate policies, market state, monetary flows and the Millennium Bug. During the first quarter international forex assets were restructured, consistent with effective limits and the new benchmark for the year, in force since 1 April 1999.

Portfolio positioning in euro. Given the major events affecting the market, EUR-denominated portfolio management was divided into two periods.

Due to the introduction of the new single European currency, the euro investments into government securities issued by Germany were diversified with government securities issued by other eurozone countries: France, the Netherlands, Austria and Belgium. Funds were invested in securities issued by international financial institutions with a term of up to one year. Portfolio duration during the first half of 1999 was maintained longer than that of the benchmark due to anticipated interest rate reductions by the European Central Bank.

Radically diverged market factors during the second half of 1999 prompted changes in the strategy intended to shorten portfolio duration in respect to the benchmark. Securities with longer maturities were sold, and securities with shorter maturities and floating-coupon securities were purchased. Positions in premium securities were reduced at the expense of benchmark securities traded at a premium. Funds were invested mostly into government securities issues by the Netherlands, Austria and Belgium which continued to generate relatively higher premium than benchmark German and French government securities. Measures intended to avoid any possible problems associated with the dawn of the year 2000 entailed an adoption of a conservative strategy during the third quarter of 1999 relating to the Millennium Bug and reduced market activity.

Portfolio positioning in US dollars. Portfolio dependence on monetary flow developments was taken into account and USD-denominated assets significantly decreased during the third quarter of 1999 due to foreign debt repayments. To minimize the effects of climbing interest rates and falling securities prices, floating-coupon securities were purchased since February. Portfolio duration was neutral compared with the benchmark in the first half of 1999 and shorter than the benchmark in the second half of 1999. During the last quarter of 1999 USD-denominated revenue exceeded payments and free funds were invested in money market instruments. To minimize the possible consequences of the Millennium Bug liquid funds were increased and portfolio duration was maintained lower than that of the benchmark at end-November and December. In December there were no transactions.

## 2. Foreign Exchange Reserves Structure

The second half of 1999 witnessed a clear upward trend in foreign exchange assets. Major factors behind this were: purchases of reserve currency from residents, receipts on government accounts including revenue from privatization and from foreign exchange reserves management transactions. Foreign debt payments appeared the major counteracting factor.

## Balance Sheet Item Assets Structure

The structure of BNB foreign exchange assets by balance sheet item changed as a result of restructuring of foreign exchange assets management, consistent with the new benchmark introduced on 1 April 1999. Changes in international financial markets, and government foreign debt payments and receipts in foreign exchange also significantly impacted asset structure.

As a result of the adopted strategy, geared toward a reduction of credit risk through investment in government securities, the share of securities in the assets structure increased, while the share of cash balances diminished.

## STRUCTURE OF ISSUE DEPARTMENT ASSETS

 BY FINANCIAL INSTRUMENT IN 1999(million BGN)

Source: BNB.

## Structure of Assets by Residual Term

The bulk of BNB assets was invested in instruments (current accounts, shortterm deposits in foreign currency and gold, and securities) with a residual term to maturity of up to one year. By end-March these assets comprised $70.76 \%$, and by end-December $69.24 \%$. The structure of international foreign exchange assets by residual term to maturity is shown below.

STRUCTURE OF ASSETS BY RESIDUAL TERM IN 1999

| (\% at end-quarter) |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: |
| Residual term | I | II | III | IV |
| Up to 1 year | 70.76 | 61.03 | 65.41 | 69.24 |
| From 1 to 3 years | 17.78 | 24.73 | 23.63 | 21.75 |

| Over 10 years | 0.00 | 0.00 | 0.00 | 0.00 |

Source: BNB.
Currency and
Foreign
Exchange Risk Assets Structure

The bulk of BNB assets was denominated in euro: its share rose from $65.57 \%$ by end-January to $72.55 \%$ by end-July and $71.68 \%$ by end-December 1999. This growth reflects primarily BNB purchases of reserve currency from residents.

The share of assets denominated in US dollars varied from $17.73 \%$ at end- January to $8.67 \%$ at end-July, and $11.94 \%$ at end-December 1999. The decline in USD-denominated assets in absolute and relative terms during the second half of 1999 was associated with the conversion of USD-denominated BNB funds into euro and levs.

The share of special drawing rights increased in June and December due to loans disbursed by the International Monetary Fund.

The foreign exchange risk is minimized by complying with the admissible deviation of $\pm 2 \%$ of the currency structure of assets from the currency structure of liabilities.

STRUCTURE OF ISSUE DEPARTMENT ASSETS
BY CURRENCY IN 1999
(million BGN)

Source: BNB.
BNB gold reserves continued to be vulnerable to risk in 1999 due to gold price fluctuations. Gold price changes affected the market value of BNB net reserves and Banking Department deposit (gold value has not been reported in accounting statements since in most months of 1999 the price exceeded DEM 500 per troy ounce).

## Credit Structure and Credit Risk

The bulk of BNB international foreign exchange assets was invested in government and government guaranteed securities (over $62 \%$ exposure to other countries and less than $20 \%$ of assets deposited with commercial banks). Most BNB correspondent banks and counterparts (more than $80 \%$ ) have the highest AAA credit rating. This guarantees the safety of BNB investments, consistent with the Law on the BNB.

## Coverage of Total BNB

 Monetary LiabilitiesThe market value of BNB international foreign exchange assets covered entirely BNB monetary liabilities, providing an excess of international foreign exchange reserves over monetary liabilities. This was expressed in the Banking Department deposit which is the BNB's net foreign exchange reserve.

BNB NET FOREX RESERVES IN 1999 ON A DAILY BASIS
(million BGN)

Source: BNB.

Interest
Rate Risk

The modified duration of international forex assets, a measure of interest rate risk, was under one year. This limited the risk of devaluating international forex assets as a result of interest rate increases. USD-denominated portfolio duration changed more often compared with the EUR-denominated portfolio duration. This was due to comparatively more dynamic movements in cash flows in this portfolio.

## 3. Net Revenue and Profitability from Foreign Exchange Reserves Management

Annualized return, including monthly revaluation of securities in 1999, accounted for $2.2 \%$ on international forex assets and $2.4 \%$ on the actively managed portion of forex assets.

## RETURN BY CURRENCY IN 1999

| Currency | Annualized return, \% |  |  |  |
| :--- | :---: | :---: | :---: | :---: |

RETURN ON EUR-DENOMINATED AND USD-DENOMINATED PORTFOLIOS AGAINST BENCHMARKS IN 1999

| Currency |  | Annualized return, \% |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | quarters |  |  |  |  |
|  |  | I | II | III | IV | II - IV |
| EUR | portfolio | 2.5 | 1.8 | 2.0 | 2.1 | 2.0 |
|  | benchmark |  | 1.7 | 1.7 | 2.0 | 1.8 |
| USD | portfolio | 4.9 | 3.4 | 6.9 | 4.6 | 5.0 |
|  | benchmark |  | 3.6 | 5.2 | 3.9 | 4.2 |

Source: BNB.
Between April and December 1999 when the new benchmark was applied, the return on both EUR-denominated and USD-denominated portfolios exceeded that on both benchmarks. This was a result of the adopted investment strategy for portfolio duration management during the period.
IV. Financial Markets and Liquidity

## 1. Liquidity

## The Interbank Money Market

The volume of traded funds in the interbank money market increased substantially in 1999, by BGN $3,294.6$ million in absolute terms compared with the previous year. In structural terms, repo agreements grew by $78 \%$, while deposits rose by $59 \%$. Repo agreements and deposit transactions grew by $66 \%$ on 1998. Major internal factors affecting the development of the interbank money market were cash flows to and from the MF. The ratio between foreign currency assets and liabilities within the banking system also impacted developments in the interbank money market.

INTERBANK MONEY MARKET IN 1999
(million BGN)

Source: BNB.

Cash flows to and from the MF followed a monthly cyclical pattern, reflecting the accumulation of excess reserves in commercial bank settlement accounts at the beginning of the month and nonperformance of minimum required reserves from mid-month until its end. Therefore liquidity dynamics determined demand for and supply of resources and caused changes in the average interbank interest rate.

In 1999 foreign banks' credit exposure increased, given the relatively steady lev deposit base. The upward trend in lev credits combined with a wider range of provided services related to lev liquidity, such as higher overdrafts on customer settlement accounts, reflected a steady demand for funds from these banks. It should be noted that foreign banks, thanks to their high rating, were able to borrow funds through unsecured deposits. As a result, a change evolved in debt internal structure compared with the previous year:

| Year | Secured debt | Unsecured debt |
| :---: | :---: | :---: |
| 1999 |  |  |
| 1998 | 74 | 56 |

Source: BNB.
In 1999 interbank money market funds traded below the base interest rate while the method of base rate setting on the basis of auctions for three-month government securities was kept.

August made the only exception to this, when interest on particular transactions reached $16.75 \%$, hitting a monthly high average of $3.59 \%$ for 1999 . The main factor for market tension in August was the timing of cash flows from the MF to the banking system.

BASE INTEREST RATE AND INTERBANK INTEREST RATE IN 1999

Source: BNB.

Commercial Bank Reserves

In 1999 the volume of attracted funds by commercial banks was volatile, given a complex and ever-changing domestic setting. Political events in the region in early 1999 led to a reduction and maintenance of the deposit base through the first half of the year at lower levels than those reported for end-1998. Only after initiation of lev redenomination in July did attracted funds gradually increase and the banking system reported an overall growth of $14.03 \%$ in December compared with the same period of 1998. Lev deposits grew by $12.87 \%$ and foreign currency deposits rose by $14.98 \%$ in lev equivalent. (This was also a result of the lev's devaluation against the US dollar by $13.68 \%$.)

In 1999 minimum required reserves remained unchanged: $11 \%$ of the deposit base.

Under volatile conditions significant fluctuations occurred in the structure of reserve assets held by banks as required reserves. In different periods and to different degrees the banks used their right to maintain minimum required reserves in foreign currency on attracted funds in foreign currency. While in December 1998 the lev equivalent of deposited foreign currency comprised $43.74 \%$ of required reserves on foreign currency deposits, in August 1999 it reached $73.48 \%$. The main reason for this was the dramatic shortage of lev funds at commercial banks as a result of disturbed cyclical pattern of cash flows from the MF to the banks, and of a BNB

Managing Board resolution on the transfer of failed banks' accounts from commercial banks to the BNB. Changing conditions in international markets prompted significant changes in the structure of reserves maintained in foreign currency by type of currency: those held in US dollars and euros decreased by $70 \%$ and $5.60 \%$ respectively, while reserves held in Swiss francs increased by $25.08 \%$ on a year earlier.

Although the banks were flexible in managing current and medium-term liquidity through changes in the structure of reserve assets during the year, the practice of maintaining considerable excess reserves continued: BGN 30,829,000 on average for the banking system. While this reflected the need to service current payments, it also showed up a continuing shortage in lev funds in the market consistent with reduced net issues of government securities and an ongoing reluctance by banks to extend more widespread credit to the real sector.

Overall, in 1999 banks did not face difficulties in maintaining minimum required reserves with the BNB. In certain months certain banks failed to comply, which may be seen as incidental and attributable to current and medium-term liquidity mismanagement. The Balkan Universal Bank was the only bank to systematically and drastically default on its minimum required reserves (from August till year-end) but this did not pose risks for the entire banking system as the bank's attracted funds accounted for just $0.11 \%$ of total commercial bank deposits and it was practically isolated from the interbank money market. Due to noncompliance with financial regulations and legal provisions, including Regulation No. 21, the bank's license was revoked in December 1999.

## 2. Financial Markets

The Government Securities Market

Primary market. The introduction of the currency board created conditions for financial stabilization and the MF gradually opted for issue of fixed-income government securities of longer maturity.

AVERAGE ANNUAL YIELD OF GOVERNMENT SECURITIES

Source: BNB.
The primary market was characterized by sustained prevalence of demand over supply, which prompted changes in the yield curve compared with 1998 until it balanced in the upper end. Lack of securities with over five-year maturity and the limited amount of five-year government securities (securities of BGN 3,190,000
nominal value were circulated from early 1999 till year-end) made it possible for two-year bonds to become the benchmark.

In 1999 the yield curve for two-year bonds displayed relatively low volatility, consistent with MF issuing policy to a great extent. The yield curve for 12 -month government securities displayed similar results while the yield curve for three-month securities was most volatile.

Secondary market. In 1999 the volume of the government securities secondary market was 2.68 times higher than that of 1998. Boosted trade in government securities is attributable to the growing number of market participants as a great number of brokerage financial houses joined the business.

USD-denominated bonds issued under ZUNK were most attractive in 1999. The volume of transactions in these securities rose 2.33 times on 1998. In 1999 a maximum difference between the price attained in the interbank market and the nominal value was reported, USD 13 per USD 100 nominal value, the lowest average price being attained in April (USD 54 per USD 100 nominal value) under the impact of the Kosovo Conflict. Trade in these securities intensified substantially at year-end and in December the average price reached USD 67 per USD 100. Expectations are for a further rise in the average price consistent with partial repayment of the principal and a reverse repurchase by the MF.

Regardless of boosted trade in government securities the secondary market lacked market makers for transactions with final investors. Primary dealers participated in the secondary market mainly to cover current liquidity needs, whereby the scope and volume of government securities transactions were reduced. On the other hand, banks' investments in government securities comprised on average $20 \%$ of those assets which do not require capital cover. Should the range of services diversify and bank lending intensify in 2000, it may be assumed that the government securities market will enter a new stage of development which in turn will boost trade in corporate securities in the capital market.

## Equity and Corporate Debt Securities Markets

Trade performance. The Bulgarian Stock Exchange (BSE) reported a total turnover of BGN 133.8 million for 1999, smaller than the equivalent of BGN 214.1 million (BGL 214.1 billion; BGN $1=$ BGL 1,000) for the total turnover in 1998. Ordinary trade in the two main markets of the bourse, the official one and the free one, was of a daily character, though of small dimensions. However, the block deals that went through these markets, while not a daily occurrence, amounted to BGN 83.6 million, thus producing the bulk of total annual turnover. A separate constituent market of the BSE was established in mid-December for privatization transactions.

A foreign bank topped the list of bourse intermediaries with largest annual turnover (block deals included), followed by two banks and two investment intermediaries. The daily and monthly turnover of the stock exchange (as well as of offbourse transactions) tended to vary significantly. A surge in ordinary trade in the free market and in block transactions took place in the BSE in December.

Equity. The general price level of Bulgarian shares did not deviate substantially from its low in the autumn of 1998. In terms of the BSE Sofia Warburg index, that level was approximately 60 points (the index started at 100 points for 31 De cember 1997). Rising interest in the shares of Neftochim, Solvey-Sodi, Bulgartabac Holding (and the tobacco sector in general) raised the Bulgarian share prices index in early 1999. In March it touched 80, when buying interest retraced and a return to the general tendency in the price level followed.

In the second half of the year, shifts in the ownership structure of large traded companies were followed by pressure on equity prices due to speculation about possible neglect of minority shareholders' interests in cases of increases in capital. Such speculative expectations applied to Neftochim, which contributed to the fall of the index to the level of 40 in October. The fears were unjustified, and the price index subsequently recovered, however remaining close to 50 . The stalling of such
fears was one of the objectives of the new Law on Public Offering of Securities, voted in December 1999 and effective from early 2000.

The shares of Neftochim, whose prices experienced great fluctuation, were also among the most liquid on the BSE.

At the end of 1999, market capitalization amounted to BGN 219.1 million for the official market of the BSE and to BGN 1,154.2 million for the free market of the bourse, i.e. to a total of BGN 1,373.3 million.

Corporate debt securities. In August a private company launched an issue of corporate bonds with a 5-year maturity. These were the only bonds traded on the BSE. The corporate bond official market of the bourse comprising transactions with this issue reported a turnover of BGN 0.5 million by end-1999, i.e. a tiny fraction of BSE trade.

Comprising deals with only one issue, the corporate bond trade on the BSE could not attain a daily character.

## The Forex Market

An overview of the forex market. The total forex market volume amounted to EUR $12,579.7$ million based on commercial bank data on transactions with a value date of two business days, including classical spot transactions, transactions with value date next business day and same business day, and cash-desk transactions. During the second half of 1999 the total volume of the forex market was EUR 6,665.9 million, exceeding the volume of the previous six-month period by approximately $13 \%$. During 1999 commercial bank purchases (including BNB) significantly exceeded sales (mainly in the second half of 1999): by EUR 245 million.

Comparison of 1998 and 1999 needs certain clarification. In early 1999 the new single European currency was introduced at the exchange rate of the Deutschemark (Bulgaria's reserve currency until 1998 in compliance with currency board rules) to the euro of DEM 1.95583 per EUR 1. The 1998 report published in Deutschemark was recomputed at the same rate. Compared with 1998 forex market volume grew by approximately $30 \%$. Almost all foreign exchange trade segments indicated a growth on 1998: the interbank market (BNB excluded), commercial bank transactions with the BNB and commercial bank transactions with final customers. Compared with 1998 only the volume of BNB transactions with final customers (budget organizations) and foreign exchange trade associated with Bulgaria's foreign debt payments reported a decline.

Market sectors. Commercial bank operations with final customers (companies, budget-supported organizations, nonbank financial institutions, individuals, nonresidents, and foreign exchange transactions associated with foreign debt payments) comprised the largest market sector. The total 1999 volume of bank forex purchases (the BNB included) from final customers considerably exceeded forex sales: by approximately EUR 185 million. During the first half of 1999 bank sales to final customers exceeded purchases by EUR 50 million (the BNB included).

Source: BNB.
The BNB share in the 1999 forex trade volume approximated $7 \%$ of total volume. Compared with 1998 the BNB share declined by almost $2 \%$, mostly at the expense of sales to final customers. Within BNB purchases from final customers, operations at its cash tills had the largest share (worth EUR 50.8 million), with approximately $100 \%$ of purchases effected during the second half of 1999 (EUR 49 million). The BNB sold foreign currency predominantly to the Ministry of Finance for Bulgaria's foreign debt payments: EUR 84 million, with the bulk of payments effected during the second half of 1999.

[^16]Market structure by currency. The market structure by currency did not experience significant changes from 1998. With the introduction of the single European currency, the euro and its components were traded almost equally, comprising slightly less than $50 \%$ of the forex market volume. The share of the US dollar and foreign currencies other than those from the eurozone accounted for $51 \%$. The share of the US dollar was $47 \%$ against $35 \%$ for the euro. Compared with 1998 when the forex trade was dominated by the US dollar and the Deutschemark, the US dollar share declined by a few percentage points ( $52.5 \%$ in 1998). The interbank market was dominated by the euro (approximately $60 \%$ against $37 \%$ for the US dollar), consistent with currency board arrangements. The US dollar sustained its leading position in final customers operations: approximately $60 \%$ of purchases from, and $56 \%$ of sales to, final customers. Compared with 1998 the trade in US dollars declined insignificantly: about $7 \%$ in purchases while in sales the 1998 level was sustained ( $55 \%$ ). Despite this forex market structure, the average monthly US dollar market rate, recomputed via all other traded foreign currencies, proved lower than the official average rate. This is shown in the table below.

AVERAGE MONTHLY BGN/USD EXCHANGE RATE

Source: BNB.

Financial markets behavior throughout 1999 (funds traded in the interbank market at a lower price than the base interest rate, lower market rate of the US dollar than the official US dollar rate, insignificant movements in market prices of government securities and traded stock) indicates no threat of liquidity risk in 1999 or 2000. In support of this, it is worth mentioning the compliance of commercial banks with minimum reserve requirements. By the end of December 1999 commercial bank minimum required reserves reached $+10.02 \%$.

In addition, stabilization reached as a result of the currency board was favorable to commercial bank financial performance. During the last three financial years commercial banks reported positive results which helped capitalize banks and hence provide them with sufficient liquid assets to meet current obligations. The ratio of liquid assets exceeding $40 \%$ by the end of 1999 indicates sufficient commercial bank liquidity. Consequently, sufficient commercial bank liquidity maintained during 1999 was the major factor which helped avoid central bank intervention in its capacity as lender of last resort.

## 3. Payment System and Settlement

Following the exclusion of bankrupt banks from the payment system in the second half of 1998, the number of newly opened input points in the BISERA network grew due to direct inclusion of newly opened commercial banks' branches in the payment system. As a result by the end of 1999 the number of participants reached 634 against 621 by the end of 1998.

Between January and December 1999, 13,037,333 interbank settlements (daily average 59,672 ) were cleared through the BISERA electronic interbank transfers system, totaling BGN 45,054,315 million (average daily BGN 178,787,000). This indicates a substantial increase of $25.8 \%$ in number and $16.8 \%$ in volume of settlements.

In certain periods payment activity was seriously affected by current economic conditions. During the first half of 1999 due to the stagnation resulting from the Kosovo Conflict and to pending national currency redenomination, the number of payments rose by $4.1 \%$ on the second half of 1998 , reaching $6,696,962$, while the volume of payments indicated a slight decrease of $1.6 \%$, totaling BGN $19,850,633,000$. Average daily values over this period were 54,008 in number and BGN 160,086,000 in volume. During the second half of the year these values improved reaching $8,340,371$ in number and BGN 25,203,682,000 in volume (daily average 65,159 and BGN 196,904,000 respectively).

During the second half of 1999 work on the BISERA 4 project was initiated. This involves a real time payment system. The BNB Board approved the task and requirements in terms of project design and timescale. Necessary arrangements were made to finish installation of the system in the first quarter of 2001.

During 1999 legislative acts regulating transactions and payments between residents and nonresidents, transborder transfers and payments, imports and exports of foreign currency in cash were adopted in line with Bulgaria's liberalized foreign exchange regime and harmonization of Bulgarian legislation with the requirements of international institutions.

By the end of 1999 the BNB Banking Department issued instructions for enactment of statutory instruments related to the Foreign Exchange Law.

# V. The Banking Sector and Banking Supervision 

## 1. Major Trends in the Development of the Banking Sector

For a third consecutive year banks continued to pursue a policy of conservative market behavior and maintenance of low-risk assets and high capital adequacy ratio: a clear sign that banks were extremely prudent in terms of risks related to economic processes in the country. Return on assets (ROA) of the banking sector in 1999 was $2.37 \%$ (against $1.72 \%$ in 1998), and return on equity (ROE) $20.88 \%$ (against $15.78 \%$ in 1998). The emergence of Bulgarian banks as major economic and financial agents, and their future position in international markets will depend on the pace of economic reform, and on restructuring of banks' activity and organization.

During 1999 the three biggest Bulgarian banks ${ }^{25}$ (Bulbank, DSK Bank and the United Bulgarian Bank) sustained their big shares in total banking sector assets: $52 \%$, including $38 \%$ from lending, $74 \%$ from securities in the investment portfolio, and $56 \%$ from securities in the trading portfolio). This group concentrated $56 \%$ of all investments of nonfinancial institutions and other customers. The group which ranks second by size and significance (Biochim, the Bulgarian Post Bank, Societe Generale Expressbank, and Hebrosbank) experienced a decline of approximately $1 \%$, the result of restructuring. However, this group had a significant market share comprising $19 \%$ of total banking sector assets (against $20 \%$ in 1998). No significant changes occurred in the market shares of banks included in the other three groups. In the group of foreign banks' branches, ING Bearings, which owns half of the assets in the group, participated most actively in the market.

[^17]
## ASSETS BY BANK GROUP

Source: BNB.

Bank Assets and Liabilities

By the end of 1999 total banking system assets increased by BGN 797 million $(10.7 \%)$ in nominal terms, reaching BGN 8,223 million. In fact this growth reflected to a greater degree the increased lev equivalent of assets foreign exchange component, resulting from the approximately $16 \%$ appreciation of the US dollar from end1998. Assets in levs increased by almost BGN 206 million ( $6.1 \%$ ), while assets in foreign currency measured in conventional USD ${ }^{26}$ decreased by approximately USD 39 million in real terms. Given enhanced competition and the need to cover overheads, in 1999 commercial banks cautiously restructured low-risk and high-risk assets into assets earning higher yield. The share of claims on banks remained most significant: $32 \%$. Lending, banks' major activity, saw a growth on 1998. Loans in foreign currency increased by approximately USD 123 million (conventional US dollars) and loans in levs by BGN 250 million. However, the share of loans in banking system assets remained low: less than $30 \%$.

By the end of 1999 banking system liabilities reported a nominal increase of BGN 577 million ( $9 \%$ ) in borrowed funds, reaching BGN 6,945 million. As in assets this reflected a higher lev equivalent of the liabilities foreign exchange component. In real terms, no significant decrease in foreign currency deposits was reported: approximately USD 23 million (in conventional US dollars). Interest obligations and other liabilities were substantially reduced, resulting in an overall decrease in foreign exchange liabilities by approximately USD 130 million (in conventional US dollars). In addition, lev deposits of nonfinancial institutions and other customers rose by BGN 198 million ( $8.5 \%$ ) from end-1998. These changes suggest a restructuring of banks' deposit base which stood stable by its volume in 1999. The low level of saving and accumulation did not allow for supply of a greater amount of longterm savings and investment products by banks.

[^18]STRUCTURE OF ASSETS IN THE BANKING SECTOR, TOTAL
(million BGN)

Source: BNB.

STRUCTURE OF LIABILITIES IN THE BANKING SECTOR, TOTAL
(million BGN)

Source: BNB.
The Bulgarian banking sector reported a net profit of approximately BGN 195 million (a $54 \%$ increase on 1998). The net interest income stood stable over the year, marking an increase of BGN 34 million (an increase of $11 \%$ on 1998). The ratio between net interest income and operating expenses $(90 \%)$ was lower than in 1998 ( $93.4 \%$ ). Comparing 1999 and 1998 revenues, it should be taken into account that banks did not earn income from reintegration of provisions allocated for covering credit losses. In 1998 almost all operating expenses were covered by these provisions. The growth in net interest income in 1999 was cancelled up by a nearly matching increase in operating expenses. Operating profit before taxation and other extraordinary operations indicated an increase of BGN 91 million, or $44.6 \%$ on
1998. It is of note that the performance of particular banks significantly diverged from the general picture, reflecting the quality of their credit portfolios, trading portfolio indicators and policies pursued.

BANK REVENUE AND EXPENDITURE
(million BGN)

Source: BNB.

## 2. Compliance with Supervision Requirements

Capital
Adequacy
(Solvency)

During 1999 the capital adequacy ratio of the banking system stood high. The total risk component of assets changed insignificantly: BGN 2,876 million against BGN 2,797 million in 1998. The capital base of the banking system reached BGN 1,188 million, an increase of BGN 145 million (13.9\%) from 1998. As a result capital adequacy indicators improved: $41.31 \%$ against the minimum required capital adequacy ratio of $12 \%$. The growth in the capital base reflected capitalized profits and increased shareholder capital through new monetary contributions. Own capital of Group I banks increased most substantially (by 15\%) due to good financial results.

The higher own capital reported by most banks may be used as a prerequisite for expanding their activity. However, it is of note that unlike the potential for an increase in risk exposures shown by Group I and II banks, the capital base of some Group III and IV banks proved insufficient for business expansion. The table below shows the banking system total ratio and capital ratios by bank group.

High capital adequacy ratios primarily reflected commercial banks' conservative policy of placing funds in low-risk investments. The degree of assets risk stood constant primarily reflecting the improvement and stabilization of credit portfolio quality. The total moderate lending growth had a positive effect on the classification of claims. Consequently the ratio of overdue credits (the sum total of all overdue credits) to the capital base dropped to $39.3 \%$ by the end of 1999. Some deviations from the banking system average ratio occurred in particular bank groups. Some banks' own capital provided lower cover on risk assets. Insufficient profits reflecting low return on assets combined with the need for additional provisioning of exposures did not allow for a capital increase in many banks.

PRIMARY CAPITAL AND CAPITAL BASE

Source: BNB.
CAPITAL RATIOS FOR THE TOTAL BANKING SYSTEM AND BY BANK GROUP IN 1999
(\%)

| Commercial banks | Total capital <br> adequacy | Primary capital <br> adequacy | Degree of <br> asset cover |
| :--- | :---: | :---: | :---: |
| Group I | 50.0 | 34.9 | 15.5 |
| Group II | 28.8 | 18.4 | 11.2 |
| Group III | 22.3 | 17.7 | 10.7 |
| Group IV | 52.8 | 45.6 | 26.0 |
| Total | 41.3 | 30.3 | 15.3 |

Note: Foreign bank branches comprising Group V are not subject to banking supervision regarding capital adequacy requirements. Source: BNB.

Until the end of 1999 compliance with the required limitation to big exposures had been applied only in respect of big loans. Since early 2000 concentration risk assessment will include all other exposures: balance sheet and off-balance sheet. During the review period banks continued to comply with the requirement for aggregate big exposure, with banks' total amount of big loans in the banking system capital base falling to $60.3 \%$ (against the admissible level of $800 \%$ ). Changes in the regulation intended to reduce big interbank exposures dependent on their residual maturity and the correspondent bank's licensing country on the one hand, and with the sizable weight of these exposures in bank assets on the other, contributed most significantly to the drop of this indicator. Nevertheless, deviations of over $25 \%$ of own funds occurred in the individual exposures of a number of banks.

STRUCTURE OF BANKING SYSTEM RISK EXPOSURES

Source: BNB.
Placements of commercial banks in securities trading and investment portfolios during 1999 were comparatively less vulnerable to market risks as most banks invested in debt instruments of prime-rate central banks and governments. Sensitivity to market and foreign exchange risks was minimized due to smooth movements in the base interest rate, consistent with the government's fiscal policy intended to minimize government budget interest expenditure. A small number of banks traded in foreign exchange derivatives and used a portion of their resources to service foreign trade and insignificant capital flows. Some banks minded to invest in more risky securities aiming at increasing revenue from commercial operations.

The banking system total open foreign exchange position accounted for just $4.6 \%$ of banks' own funds (against $15 \%$ in 1998). Banking system foreign exchange risk decreased more than three fold, reflecting banks' improved management of foreign currency positions and security against foreign exchange risk through hedging operations, consistent with international forex market developments. By the end of 1998 the US dollar position accounted for half the weight of the net open foreign exchange position, while by the end of 1999 this weight was less than $1 \%$. This change reflects the closure of a part of open US dollar positions in the last quarter of 1999 and their conversion into euro positions due to expected progressive exhausting of opportunities for gains at the existing levels of the US dollar.

Throughout 1999 commercial banks maintained high levels of primary and secondary liquidity. If there was any threat of liquidity risk so far, it was associated mostly with maturity mismatches between liabilities and liquid assets. Although average minimum balances on short-term deposits were left on account for a long time, they could not be characterized as long-term target savings, since they had to be at depositors' disposal. This impeded transformation of assets maturity into credit operations and investments with longer maturity. Therefore commercial banks had to maintain high liquidity levels. Banking system cumulative cash flows in time horizons of up to three months were positive, as were six-month time horizons for 15 banks and branches. In addition, the country's settlement system operated normally, indicating a moderate increase in the volume of payments. Banks easily provided liquidity to meet increased noncash payments in 1999. The ratio of highliquid assets to borrowed funds reflected the changes which occurred during 1999: moderate lending growth and improved bank management.

## 3. Banking Supervision Activities throughout 1999

As a result of accelerated bank privatization and economic stabilization, the equity structure of a number of banks experienced serious changes in 1999. The most significant changes reflect acquisition of equity stakes upon a permit from the BNB by foreign investors as Refco Capital Markets, AIG-New Europe Fund, Societe Generale, and the Regent Pacific Group. Banking system assets controlled by foreign investors dramatically increased.

Changes in the corporate structure of banks prompted dynamic movements in their management bodies. Certificates for participation in bank management were issued to 44 persons. During 1999 two banks were granted licenses to conduct bank transactions and opened offices. Demirbank (Bulgaria) A.S. is the first private Turkish bank in Bulgaria. After several years of delay the Promotional Bank was established with government funds to encourage small- and medium-scale business.

A number of companies were interested in bankrupt banks and applied for a license to conduct bank transactions. The applications were rejected mostly due to the unacceptable amount offered to satisfy these banks' creditors, the lack of transparency in intentions and in the origin of funds.

By the end of 1999 licenses of all banks and foreign bank branches were renewed, consistent with the Law of Banks with the exception of the Balkan Universal Bank.

BANKING SYSTEM ASSETS BY MAJORITY CAPITAL

Source: BNB.

Regulation of Bank Activities

In the context of increased foreign participation in Bulgaria's banking system, supervisory activities and bank regulation should be sufficiently flexible and reflect financial sector developments and trends. In the pursuit of a policy of adapting international best practice, the Banking Supervision Department's priorities involved maximum harmonization of Bulgaria's banking laws and regulations with EU financial sector Directives and adjustment of banking system activities in conformity with the major principles for effective banking supervision of the Basle Committee on Banking Supervision. In its capacity as a regulatory and supervisory body the BNB intensively participated in the harmonization of the bank regulatory framework with

EU financial sector Directives and in compliance with the major principles for ef－ fective banking supervision．It is of note that the harmonization and experience in applying the above requirements marked significant progress．To this end，the BNB accepted the IMF＇s proposal to make an expert assessment of the attained level of efficiency of applied procedures，as well as of the degree of transparency of bank－ ing supervision policies and activities．The assessment was published on the Internet．

Based on the amendments made to the Law on Banks in June，and in compli－ ance with the Banking Supervision Department program，a new regulation on li－ censes and permits issued by the central bank was drafted，providing improved transparency in requirements and in procedures for issuing licenses．

The introduction of the euro，the single European currency，and indirect fix－ ing of the lev exchange rate to the euro entailed changes in BNB Regulation No． 4 on foreign currency positions of banks．In practice，limitation on banks＇foreign cur－ rency positions in euro and euro－included currencies were removed．Reporting forms were changed and improved．

Amendments made to Article 29 of the Law on the BNB and work on a new regulation on big exposures were intended to bring this regulator in line with the re－ quirements of EU Directive 92／121 on monitoring and control over big exposures of credit institutions．The Regulation was adopted by the BNB Board，coming into force in November．With its adoption the scope of risk exposures has been widened： it includes in the general risk for a bank an object of limitation and related persons． Exposures should be reported，that is this Regulation should apply，both on an in－ dividual and consolidated basis．

BNB Regulation No． 9 on the evaluation of banks＇risk exposures and the al－ location of provisions to cover the risk from losses was amended significantly． Changes aimed to provide，\＃廿姆制的 more adequate regulation of netting expo－ sures subject to provisioning with risk－free collateral；treatment of renegotiated and restructured credits；liberalizing requirements for the size of provision；and facilitat－ ing banks in writing off claims recognized as a loss within a shorter period．

Significant work on unifying and bringing banks＇annual financial statements in compliance with international accounting standards was carried out．This helped achieve transparency，data comparability and public accountability．

In addition to the requirements for consolidated financial statements，detailed instructions on consolidation methods were developed，providing a solid foundation for applying the principles of consolidated supervision over bank groups and finan－ cial holdings．

During the review year the system of off－site banking supervision（an early warning system）was improved，which helped monitoring and analysis of a database for each bank and for the entire banking system．Uniform monthly and quarterly forms of analytical reporting were introduced as an element of the system．This made for comparability and consistency of results for analysis and subsequent deci－ sion－making．

With a view to ensuring regular and timely presentation of analytical reports， banking supervision information technology were upgraded to gather and process incoming information from bank reports，maintain databases and archive them bank－by－bank，so as to address the needs of banking supervision staff，management and other users．

The methodology for assigning quarterly ratings under the CAEL system of indicators was improved．Assignment of CAEL ratings to banks and their system－ atizing was aimed at optimizing control within the supervisory strategy developed for each bank．

An important aspect of banking supervision activity was the periodic prepara－ tion of monthly statistical information on banks and aggregate information on se－ lected indicators for the banking system，published in BNB bulletins．Work on com－ piling quarterly reports on performance and trends in the banking system continued．

Banking supervision plays an important role in assessing the risks of commer－ cial banks servicing external lines of credit guaranteed by the Bulgarian Govern－
ment. The Department is also in charge of preparing information related to the selection of primary dealers of government securities among the banks in order to guarantee government budget funding and liquidity.

On-site
Supervision (Inspections)

In 1999 the Banking Supervision Department updated and enacted the new manual on banking supervision. The manual provides for standardized on-site supervision procedures based on a five-scale CAMELS/AIM system of assigning bank ratings and allows for higher efficiency and consistency in conducting inspections and examinations. Similarly to the early warning system, CAMELS/AIM is a riskbased approach to financial performance assessment and to the determination of appropriate and timely enforcement measures against problem banks depending on their weight and the gravity of violations found.

The rating scale ranges from one to five, rating one indicating the best financial performance and use of risk management procedures in accordance with a bank's size, complexity of operations and risk profile, and requiring minimum supervisory attention. Rating five means a critical level of financial performance and lacking or inadequate risk management procedures, as well as maximum attention from banking supervision.

The chart below, based on data from the assessment of all operating banks, illustrates that the number of institutions with higher ratings (one and two) increased in 1999 compared with 1998 mainly at the expense of the group rated satisfactory three.

CLASSIFICATION OF BANKS UNDER CAMELS/AIM

Note: The Promotional Bank and Demirbank (Bulgaria) were not assigned ratings due to incomplete business year. Source: BNB.

After a series of examinations and supervisory enforcement measures, including license restrictions, at the end of 1999 the BNB appointed a conservator and in early 2000 filed in court for the institution of bankruptcy proceedings against the only bank with the lowest rating: the Balkan Universal Bank. Banks with a rating of four reported better financial indicators at the end of the review year which gives grounds for assuming that a higher rating could be assigned to them in 2000.

The positive change in the classification of banks under the CAMELS/AIM system compared with 1998 reflects their conservative risk policies.

In 1999 the Inspections Directorate carried out 19 thorough supervisory inspections, including three in banks with systemic significance from Group I and

Group II, ten in banks (including a foreign bank's subsidiary) from the medium and small group, and six in branches of foreign banks. A great number of target examinations with different scopes and objectives were conducted.

In structuring bank assets priority has been assigned to liquidity risk. Assessment and management of credit risk has been overlooked by a number of banks. In some banks there is no risk management system, or else divisions charged with it do not operate effectively. Criteria for risk exposure classification adopted by some banks do not provide sufficient information on their actual quality and do not comply with supervisory regulations fully. Inspections found a number of mismatches in banks' lending activities despite the adoption of formal rules for effective lending (lending rules and credit committees). A number of banks do not have systems for current monitoring and analysis of financial performance, market behavior and borrower status. In some banks where equity is concentrated within a family circle, risk concentration was higher because of pressures to extend specific loans becoming nonperforming later. Some findings reveal improper interpretation and use of 'high-liquidity collateral' and of 'the net value' of credit exposures, which reflected negatively on the extent of allocated provisions.

In 1999 some banks failed to make consistent and decisive efforts to optimize their organizational structure and management. Procedures for risk assessment and management of particular types of risk (credit risk, country risk, market risk) were not designed by some banks, while elsewhere breaches of these procedures were found. The future development of bank institutions is paid insufficient attention. Some banks have no strategic programs for capital provision, and no financial revenue and expenditure plans itemized by potential source of revenue and item of expenditure. Restructuring of some banks' internal control is still underway and is inadequate. Staff number and qualification should be tailored to specific needs with a view to improving and increasing the volume and diversity of bank operations. The ongoing process of replacing majority shareholders impacted some banks' activities adversely.

All banks successfully resolved the Millennium Bug problem thanks to markedly upgraded and better information systems. At the same time, enhanced software potential and available databases were not used properly to improve management. Inspection findings reveal breaches of internal bank rules regulating different activities and noncompliance with legislative requirements on precision and thoroughness.

## Special Supervision

In view of the topicality of the money-laundering problem, in 1999 commercial banks were given assistance in organizing their activities in compliance with the Law on the Measures against Money Laundering (LMML). The Banking Supervision Department prepared methodological instructions on designing internal rules for enactment of this Law by banks. Training on preventing the use of bank operations for the transfer of illegal capital was organized in collaboration with the Ministry of Finance's Financial Intelligence Service Office. Two glossaries were compiled: on financial crimes and on suspicious operations. These were distributed among specialized staff at commercial banks. A special manual was compiled on the basis of improved methodology of inspections and examinations of banks on compliance with the LMML, systematizing and standardizing the procedures for these supervisory functions.

Commercial banks' operations as investment intermediaries are of crucial importance for building higher credibility in the capital market and its development. In 1999 inspections of 15 banks were carried out together with the Securities and Stock Exchanges Commission (SSEC). Serious breaches of the Regulation on requirements for trading as an investment intermediary and the Law on Securities, Stock Exchanges and Investment Companies were found: lacking requisites in contracts on individual securities portfolio management, including notification to customers on investment risks.

Executive directors of banks were advised to remove breaches and infringements within foreseeable time limits while noncomplying banks were sanctioned by the SSEC.

BNB Regulation No. 26 on transactions by finance brokerage houses in foreign instruments of payment was developed and amended, so as to regulate nonbank financial institutions' activity. The Banking Supervision Department was set on exercising full control over compliance with the Law on Transactions in Foreign Currency Valuables and Currency Control (and after its repeal, the new Foreign Exchange Law) and statutory instruments thereof. The licenses of 222 finance brokerage houses and exchange bureaux were revoked. By the end of 1999 one-year permits for conducting cash transactions in foreign instruments of payment were granted to 48 finance brokerage houses.

## Banks in Bankruptcy

During the reporting period the Banking Supervision Department monitored the process of liquidation of banks in bankruptcy through their reports. The BNB made efforts to render assistance and accelerate the process, despite its limited powers. The analysis of particular indicators on the state of affairs of banks in bankruptcy proceedings as of 31 December 1999 shows that the process is slow and its results unsatisfactory.

The total value of these banks' assets as of 31 December 1999 (BGN 687,808,000, including cash balances) covered $49 \%$ of recognized and approved claims, which amount to BGN 1,390,011,000.

Low collection rates on loans and other claims combined with difficulties in selling fixed tangible assets consistent with the lack of markets and demand did not contribute to replenishing the mass of bankruptcy as quickly as envisaged. Liquidation costs as of 31 December 1999 covered $40 \%$ of collected receivables. The sale of property and the sale of banks as going concerns, as set forth in §46, para. 4 of the Transitional and Final Provisions of the 1999 Law on Banks, is aimed to complete the process and concentrate remaining assets in one center created to that end: the Unified Revenue Agency.

## Legal Activity and Supervisory Measures

During the review year the Banking Supervision Department was charged with drafting amendments and supplements to the Law on Banks which came into force in June 1999. These helped improve the legal framework by clarifying terms, and expanding the scope of supervisory measures against operating banks and banks in bankruptcy with a view to accelerating bankruptcy proceedings. A number of draft amendments to supervisory regulations and new BNB regulations were reconsidered and made more precise. Newly adopted or amended Articles of Association of 12 banks were reviewed and statements of opinion on their compliance with the Law or breaches found in the entry of amendments in the Commercial Register were provided.

The Banking Supervision Department considered a number of complaints by persons who claimed their rights and interests had been infringed by commercial banks. Many of these cases were brought by government offices, companies, or legal authorities. Some cases were highly complex while others were groundless. This activity is of great importance for supervisory work because it provides a form of control over banks' relations with customers and is an indirect indicator of banking system status and credibility.

In compliance with established practice for the eradication of commercial banks' supervisory requirements breaches, 25 supervisory measures were imposed. Eight of these were formal and relevant orders were issued for their enforcement. Supervisory measures of an informal nature prevailed in the review period. These included meetings with banks' managements to recommend various actions, prepare plans and undertake commitments to remove banking regulation breaches. All formal measures were brought into effect and banks presented notifications of rectification undertaken in respect of informal measures. The record of supervisory measures imposed is permanently updated and is intended to monitor whether supervisory measures are applied properly, consistently and effectively.

Along with imposing supervisory measures, the Banking Supervision Department instituted several administrative penalty proceedings against managers, bank officials and banks. Most of these resulted in written warnings and four: with the
imposition of penalties. Despite the improved effectiveness of supervisory measures, some banks failed to comply with recommendations and instructions in an adequate and timely manner. Clearly, measures under Article 65, para. 2 of the Law on Banks should be imposed more frequently.

Bulgaria is one of the pilot countries tested for compliance with Major Principles of Effective Banking Supervision and practical relevance of particular regulations. The modern methodology used employs primary and secondary criteria graded as fully applied, broadly applied, partly applied and non-applied. Primary criteria show that Bulgaria applies 23 of the total of 25 principles. Fifteen of these are fully applied, eight are broadly applied, and internal rules on one partly applied principle and one formally non-applied one will be harmonized with international standards in the transition period. Based on both primary and secondary criteria used by EU member countries, Bulgaria applies nine principles fully, 14 broadly, one partly (in the context of legislative changes on consolidated supervision) and one is not applied (country risk). Gradual convergence toward major principles of effective banking supervision and enforcement by the BNB corresponds to the Code of Sound Practice of Transparency in Monetary and Financial Policies, as approved by the IMF in general terms.

Looking at the progress made by banking supervision, which has contributed considerably to Bulgaria's banking sector stability, the following major issues emerge in the context of the formal introduction of the legal framework of Major Supervisory Principles: consolidated supervision and accounting; country risk; and market risks. A focus will also be put on requirements for bank managements to submit and implement integrated rules and procedures for, inter alia, corporate management, risk management systems, and management information systems.
VI. European Integration and International Activity

## 1. European Integration

In October 1999 the European Commission published its second Regular Progress Report on Bulgarian compliance with the Copenhagen Criteria for EU membership. The general evaluation was positive in political and economic terms. The report motivates the invitation extended by the Council of Europe in December 1999 in Helsinki to Bulgaria to start EU accession negotiations together with Latvia, Lithuania, Malta, Romania and Slovakia. This event marked the beginning of a new stage in relations between the Republic of Bulgaria and the European Union, entailing great challenges for the Bank.

Bulgaria's relations with the European Union legally rest on the European Association Agreement signed in 1993 and effective from 1 February 1995. This created the institutional mechanism and legal framework for holding bilateral discussions on promoting economic links and support for Bulgarian economic reforms.

The BNB took part in the preparation for EU accession through its membership in the government-established European Integration Council and the Committee on Eurointegration, and at expert level through participation in working groups on issues within its field of competence. Negotiations with the EU are being held at government level. Although the BNB does not take direct part in them, its involvement is of the utmost importance in the fields where the Bank is mandated key functions, including the authority to determine and implement monetary policy, issue regulations, and exercise banking supervision.

Since 1997 the Deputy Governor heading the Banking Department is a member of the European Integration Council. BNB employees are included in four working groups: on the Freedom to Provide Services, on the Free Movement of Capital, on Company Law, on Economic and Monetary Union, and, since June 1999, on Statistics.

During the review year Bank experts worked on drafting and presenting several documents: the National Program for Adoption of Acquis Communautaire (a self-assessment document on the compliance of Bulgarian legislation with EU legislation), the Accession Partnership report, and the Joint Assessment of MediumTerm Priorities for Bulgaria's Economic Policy. BNB representatives discussed proposed changes in legislation in relation to central bank and commercial bank activities and the payment and settlement systems during multilateral and bilateral screenings (an analytical review of Bulgarian legislation and its compliance with EU legislation).

BNB experts participated in the preparation of major amendments to banking legislation aimed at harmonization with Acquis Communautaire: the Law on Banks, the Foreign Exchange Law and their regulations on implementation.

In the field of freedom to provide bank services, the BNB consistently elaborated the legal framework and its implementation. Significant progress was made in implementing the Basle Committee on Banking Supervision principles and in transposition of European legislation with regard to, inter alia, single bank license, banks' capital adequacy, evaluation of banks' risk exposures and allocation of provisions to cover the risk of losses, regulation of banks' big exposures.

BNB experts participated in the preparation of the new Foreign Exchange Law and its regulations on implementation. This provides for liberalized capital movement and payments between residents and nonresidents in compliance with the

Treaty on European Union and EU Directives on the free movement of capital within the European Union. Work on the BISERA 4 project (the payment system for on-line gross settlement) intensified. This system shall comply fully with European regulations on payment systems (TARGET). Central bank experts took part in seminars organized by the European Commission and the TAIEX Office dedicated to member country experience in harmonizing legislation on bank services and the free movement of capital.

The BNB is participating in preparing a strategy for accession to the Economic and Monetary Union. BNB priorities involve the creation of an institutional and legal framework for joining the single currency union as regards central bank independence, a ban on lending to government institutions and a ban on priority government access to financial institutions. The objective is to attain a higher level of integration, viz. the fulfillment of convergence criteria for eurozone membership. Work on harmonizing Bulgarian statistics with EU requirements is administered and coordinated by the National Statistical Institute. The BNB participates in this as regards statistics compiled by it on monetary and banking data and the balance of payments. As a first step in establishing regular contacts with the European Central Bank for harmonizing monetary and banking statistics with EU standards, in December BNB employees attended a European Central Bank seminar for EU accession countries. Currently interest rate statistics is being updated in compliance with European Central Bank practice. Experts from the Statistics Directorate took part in a pilot project on the General Data Dissemination Standard, and the BNB has begun applying it.

Forthcoming accession negotiations motivated institutional strengthening of the International Relations Directorate and the creation of an European Integration Sector there. The new Sector's major objectives are: to establish contacts between the BNB, the European Commission, the European Central Bank and the Bulgarian Government in relation to negotiations; to coordinate European integration activities within the BNB and to prepare materials, opinions and statements on negotiations.

A key international cooperation event was the participation of BNB representatives in the Helsinki Seminar on the Accession Process, organized jointly by the European Central Bank and the Finnish Central Bank, on 10 - 12 November 1999. The Seminar gathered representatives from the European Central Bank, the 11 eurozone countries and the central bank governors of the 12 EU accession countries. Being the first of its kind, the objective of the Seminar was to make a complete review of central banking issues involved in accession, to identify the main problem areas, and to enhance cooperation between the European system and candidate countries' central banks.

## 2. International Activity

The year marked developments in BNB international activity in the context of enhanced cooperation with European institutions. Intensive communication with the European Commission, the TAIEX Office and the European Central Bank reflects the strategy for Bulgarian accession to the EU, and the need for mutually beneficial and fruitful relations and for technical assistance.

## Relationships with Central Banks

Ties with central banks are a key element of international activity. Contacts with the central banks of EU member countries are essential in the context of providing technical assistance and cooperation in the pre-accession period. Relationships with the central banks of France, Germany and the Netherlands have been established and maintained, paving the ground for further cooperation. Relationships with the central banks of Estonia, Poland and Hungary, countries which started their EU accession negotiations in 1998 and have accumulated organizational and institutional experience, are regarded as most fruitful.

## Relationships

 with International Financial InstitutionsAt the initiative of the International Monetary Fund, working jointly with the BIS, the reports on Transparency of Bulgaria's Monetary and Fiscal Policies and on Major Basle Principles of Effective Banking Supervision: Evaluation for Bulgaria were prepared. They were based on answers to questionnaires provided by the Bulgarian authorities and the meetings and talks in June and July 1999 between representatives of the BNB, other domestic financial institutions, and the IMF Technical Mission.

Bulgaria took part in an initiative of the Coordination Group within the BIS in relation to central bank management. Experts from the International Relations Directorate participated in the project for the creation of an informal system of information exchange between central banks and the BIS on issues related to efficient central bank management.

The BNB continued to act as depository and agent of the government in the context of its membership and financial relationships with the IMF, the International Bank for Reconstruction and Development, the European Union, the G-24 countries, and the European Investment Bank for the service of loan agreements on funding small and medium enterprises.

In September 1999 the BNB took part in a meeting of the Banking and Finance Work Group within OBSEC. The Work Group adopted an Action Plan, aimed to provide conditions for institutionalizing dialogue and for cooperation between the banking and financial institutions of OBSEC member countries. It also aimed at further development of economic ties, trade and joint ventures in the context of these countries' future integration into the European Union. Opportunities of establishing a Financial Institutions Association for member states were discussed at the meeting.

## VII. BNB Financial Statements

## 1. Annual Financial Statement

The annual financial statement was prepared in accordance with the Law on the BNB and the principles of International Accounting Standards.

The Issue Department balance sheet, whose assets reflect the structure and amount of BNB international foreign exchange reserves, was published weekly. Publicity was in line with the adopted policy of transparency in BNB operations to ensure credibility in the national currency.

International foreign exchange assets include invested cash in the form of deposits and nostro accounts (current accounts of prime-rate banks); monetary gold in bullion market standard (valued at DEM 500 per troy ounce, or at market value based on the London Stock Exchange official exchange rate, if lower), and cash placed in prime-rate high-liquid foreign government securities (at market value).

The Banking Department balance sheet assets include, inter alia, nonmonetary gold and other precious metals; investment portfolio of securities held by the Bank until maturity; loans and advances to banks net of provisions; receivables from government on extended credits; Bulgaria's IMF quota; the deposit with the Issue Department; and fixed assets. The liabilities include all Bulgarian obligations to international financial institutions, BNB equity, and reserves.

Major BNB revenue sources are income from interest, fees, commissions and valuation adjustments. Central bank income depends primarily on flexible management of the Bank's international foreign exchange reserves, in compliance with Articles 28 and 31 of the Law on the BNB.

BNB interest income and expenses are recognized on the basis of the accrual method and income and expenses for fees and commissions are recognized at the date of their origination.

Performing its function of fiscal agent on the cash basis reporting of the state budget the BNB continued to service accounts of prime budget entities free of charge.

During 1999 interest income was generated almost completely from operations in foreign currency and foreign currency-denominated securities. Interest income generated in the reporting period accounted for BGN 161,785,000, an increase of $33 \%$ from 1998. Interest expenses in 1999 totaled BGN 17,046,000, a decrease of $73 \%$ compared with the previous year. In 1999 BNB net interest income totaled BGN 144,739,000, an increase of $148 \%$ on 1998. The major reasons behind this growth are higher average assets profitability and reduced interest expenses.

The structure of BNB net financial result prior to allocation of provisions was as follows:

|  |  | $(\%)$ |
| :--- | ---: | ---: |
| Net interest income | 1998 | 1999 |
| Income from dividends | 69.85 | 72.42 |
| Net income from fees and commissions | 3.43 | 1.56 |
| Net income from government securities operations | -0.56 | 0.62 |
| Net profit from valuation adjustments | 65.36 | 14.06 |
| Other income | -43.40 | 3.46 |
| Total | 5.32 | 7.88 |
|  | 100.00 | 100.00 |

Source: BNB.
BNB profit net of allocated provisions and deductions of a portion of the profit for special reserves totals BGN 184,688,000, an increase of $50 \%$ on 1998.

## Auditors' Report to the Managing Board of the Bulgarian National Bank

We have audited the financial statements of the Bulgarian National Bank for the year ended 31 December 1999, which are set out on pages 97 to 110.

## Respective responsibilities of directors and auditors

As set out in the Statement of Responsibilities on page 96, these financial statements are the responsibility of the Managing Board. It is our responsibility to form an independent opinion, based on our audit, on the statements and to report our opinion to you.

## Basis of opinion

We conducted our audit in accordance with International Standards on Auditing. Those Standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.

## Qualified opinion on the financial statements

As described in the accounting policies, the Bank values its monetary gold in accordance with the Law on the Bulgarian National Bank at the lower of either market value or DEM 500 per troy ounce. At 31 December 1999, the value of monetary gold was in excess of DEM 500 per troy ounce. Under International Accounting Standards, monetary gold in the balance sheet should be carried at market value. The effect of doing so would be to increase its recorded value by BGN 85 million, increasing net income from ordinary activities and transfers to special reserves by the same amount.

In our opinion, except for the effect on the financial statements of the matter referred to in the preceding paragraph, the financial statements give a true and fair view of the financial position of the Bulgarian National Bank as at 31 December 1999 and of the results of its operations and its cash flows for the year then ended and have been prepared in accordance with International Accounting Standards.

## Statement of Responsibilities of the Managing Board of the Bulgarian National Bank

The Law on the Bulgarian National Bank requires the Managing Board of the Bulgarian National Bank to prepare financial statements each year to present the financial position of the Bulgarian National Bank and the profit or loss for the period.

The financial statements prepared by the Bulgarian National Bank are based on the accounting principles approved by the Managing Board in compliance with International Accounting Standards.

The Managing Board of the Bulgarian National Bank is responsible for maintaining proper accounting records which disclose with reasonable accuracy at any time the financial position of the Bulgarian National Bank. It has a general responsibility for taking such steps as are reasonably open to it to safeguard the assets of the Bulgarian National Bank and to prevent or detect fraud and other irregularities.

26 April 2000

Svetoslav Gavriiski
Governor of the BNB

## Balance Sheet of the Bulgarian National Bank as of 31 December 1999

The accompanying notes on pages 100 to 110 form an integral part of these financial statements.

## Notes to the Financial Statements

## 1. Organization and operation

The Bulgarian National Bank (the 'Bank') is $100 \%$ owned by the Bulgarian State.
The Bank is the central bank of Bulgaria. The operation of the Bank is governed by the Law on the Bulgarian National Bank, which has been effective from 10 June 1997. Under this law, the primary objectives of the Bank may be summarized as:

- maintaining the stability of the national currency;
- the exclusive right to issue banknotes and coins; and
- regulation and supervision of other banks' activities.

The principal operations as a result of this Law may be summarized as:

- the Bank may only provide funds to the government in accordance with rigid criteria;
- the Bank may only lend to commercial banks in accordance with very stringent terms and conditions;
- the Bank may not deal in Bulgarian government bonds;
- the Bank may not issue Bulgarian levs in excess of the Bulgarian levs equivalent of the gross international foreign currency reserves; and
- the Bank must prepare its accounts in accordance with International Accounting Standards (IAS).

## 2. Basis of preparation

The financial statements are prepared in accordance with and comply with International Accounting Standards. The financial statements are prepared under the historical cost convention as modified for by the revaluation of certain assets and liabilities to fair value.

On 5 July 1999 the Bank redenominated the Bulgarian lev (BGL) into the new Bulgarian lev (BGN) on a 1,000 to 1 basis. As such, the comparatives have been restated to BGN.

## 3. Summary of significant accounting policies

(a) Interest income and expense

Interest income and expense are recognized on an accrual basis and are calculated in accordance with Bulgarian law or any agreement between lenders and borrowers. Interest income ceases to be accrued when a loan repayment becomes more than 90 days overdue.
(b) Fee and commission income and expense

Fee and commission income and expense are recognized in the income statement at the date earned or incurred.

## (c) Securities

Investment securities are those securities where the intention is to hold them until maturity. These are valued at cost, with any premium or discount on acquisition being recognized on an accrual basis.

Trading securities are those foreign debt securities which form part of the gross international foreign exchange reserves of the Bank. These securities are recorded at market value. Movements in the market value of these securities are initially recognized in the income statement and then transferred to a special reserve in accordance with the Law on the Bulgarian National Bank.

## (d) Loans and provisions for possible credit losses

Loans are stated in the balance sheet at the amount of principal outstanding less any provision for bad and doubtful debts. A provision is made for any amounts where recovery is uncertain. The provision is recognized as an expense in the income statement and deducted from the total carrying amount of the loans.
(e) Gold and other precious metals

In accordance with the Law on the Bulgarian National Bank, monetary gold is valued at the lower of DEM 500 per troy ounce or market value based on the official London fixing rate at the balance sheet date. Monetary gold is classified as gold in standard form.

Gold, including nonstandard gold, and other precious metals are valued at market value based on the official London fixing rate as of the balance sheet date.

## (f) Investments in other entities

Details of investments held are set out in note 14 .
The wholly owned trading subsidiaries are included in the financial statements at the cost of the investment and are not consolidated, as the effect of nonconsolidation of these subsidiaries is not material in the context of the financial statements taken as a whole.

Equity investments are included in the financial statements at the lower of cost and the estimated market value of the investment. Equity investments in Bulgarian institutions which are regarded as associates have been included at cost as any adjustments under the equity method are not considered material in the context of the financial statements taken as a whole.

## (g) Property, plant and equipment

Property, plant and equipment are stated in the balance sheet at their purchase cost as modified by any revaluations, less accumulated depreciation. Revaluations were undertaken at 31 December 1999 in accordance with the revaluation indices published by the Bulgarian government. When an asset's carrying amount is increased as a result of revaluation, the increase is credited directly to the reserves, subject to the revalued amount not exceeding the estimated market value. When as asset's carrying amount is decreased as a result of a revaluation, the decrease is offset against any previous revaluation in the reserves, with any excess being recognized as an expense.

Depreciation is provided on a straight line basis at prescribed rates designed to writeoff the cost or valuation of fixed assets over their expected useful lives. The following are approximations of the annual rates used:

| Buildings | 4 |
| :--- | ---: |
| Equipment | $4-15$ |
| Fixtures and fittings | 15 |
| Motor vehicles | 15 |

A valuation was performed by the Managing Board on the fixed assets at 31 December 1999 which increased the value of the fixed assets by BGN 3.7 million.

Property, plant and equipment in progress are not depreciated until they are completed or ready for use. The asset is then transferred to the relevant asset class and depreciated accordingly.

## (h) Foreign currencies

Income and expenditure arising in foreign currencies is translated at the official rates of exchange ruling at the transaction date. Assets and liabilities denominated in foreign currencies are translated at the official exchange rate ruling on the last day of the accounting period. Gains and losses are recognized in the income statement. Gains and losses are then transferred to or from a special reserve as permitted by the Law on the Bulgarian National Bank, refer note 3 (k) below. Foreign currency-denominated nonmonetary assets and liabilities are valued at the historical rate at acquisition.

Open forward foreign exchange contracts are valued at market value.
The exchange rates of major foreign currencies at 31 December 1999 were:

| Currencies | 1999 | 1998 |
| :--- | :--- | :---: |
| US dollar (USD) | $1:$ BGN 1.94687 | $1:$ BGN 1.6751 |
| Deutschemark (DEM) | $1:$ BGN 1.00000 | $1:$ BGN 1.0000 |
| Euro (EUR) | $1:$ BGN 1.95583 | $1:$ BGN 1.9629 |
| Special drawing rights (SDR) | $1:$ BGN 2.66906 | $1:$ BGN 2.3565 |

## (i) Taxation

The Bank is not subject to income tax on profits. It is required to contribute a portion of its net income to the Bulgarian State as described in note 3(k).

## (j) Loans from International Monetary Fund (IMF)

The borrowings from the IMF are denominated in special drawing rights (SDR). Any unrealized exchange gains or losses are accounted for in accordance with note 3(h).

## (k) Share capital and reserves

Share capital represents nondistributable capital of the Bank.
In accordance with the Law on the Bulgarian National Bank, the Bank is required to
transfer to reserves $25 \%$ of the annual excess of revenue over expenditure. Special reserves are established from $1 \%$ of the annual excess of income over expenditure; the net gains and losses arising on the revaluation of assets and liabilities denominated in foreign currencies or gold; or on a decision of the Managing Board.

After transfers to reserves and special funds, the balance of the revenue over expenditure is credited to the account of the state budget.
(l) Cash and cash equivalents

Cash and cash equivalents consist of cash in hand, nostro accounts, current accounts and term deposits with maturities of less than three months.

## 4. Interest income and expense

| Interest income | $\mathbf{1 9 9 9}$ <br> BGN $\mathbf{\prime 0 0 0}$ | $\mathbf{1 9 9 8}$ <br> BGN $\mathbf{~} \mathbf{0 0 0}$ |
| :--- | ---: | ---: |
| Banks and financial institutions |  |  |
| - in BGN | 315 | 174 |
| - in foreign currencies | 161,470 | 121,338 |
| Total | 161,785 | 121,512 |
| Interest expense |  |  |
| Banks and financial institutions |  |  |
| - in BGN | 2,281 | 4,848 |
| - in foreign currencies | 14,765 | 58,493 |
| Total | 17,046 | 63,341 |

## 5. Net foreign exchange gains / (losses)

|  | $\mathbf{1 9 9 9}$ <br> BGN $\mathbf{' 0 0 0 ~}^{2}$ | $\mathbf{1 9 9 8}$ |
| :--- | :---: | :---: |
| BGN '000 |  |  |
| Revaluation of gold and precious metals | 35,206 | $(27,661)$ |
| Foreign exchange gains | 10,864 | 17,763 |
| Foreign exchange losses | $(39,152)$ | $(26,247)$ |
| Total | 6,918 | $(36,145)$ |

## 6. Operating expenses

|  | $\mathbf{1 9 9 9}$ | $\mathbf{1 9 9 8}$ |
| :--- | ---: | ---: |
|  | BGN ${ }^{\mathbf{0 0 0 0}}$ | BGN ${ }^{\mathbf{0 0 0 0}}$ |
| Personnel | 12,076 | 9,222 |
| Administration | 24,112 | 13,179 |
| Depreciation charge | 8,574 | 5,937 |
| Other expenses | 855 | 688 |
| Total | 45,617 | 29,026 |

7. Cash and amounts due from banks

|  | $\mathbf{1 9 9 9}$ | $\mathbf{1 9 9 8}$ |
| :--- | :---: | ---: |
|  | $\mathbf{B G N} \mathbf{' 0 0 0}$ | $\mathbf{B G N} \mathbf{' 0 0 0}^{\prime}$ |
| Foreign currency cash | 33,921 | 17,764 |
| Nostro and current accounts with other banks | 482,223 | 779,372 |
| Deposits in foreign currency | 735,592 | $2,174,829$ |
| Total | $1,251,736$ | $2,971,965$ |

## 8. Gold and other precious metals

|  | $\mathbf{1 9 9 9}$ <br> troy <br> ounces ${ }^{\prime} \mathbf{0 0 0}$ | $\mathbf{1 9 9 9}$ <br> BGN ${ }^{\prime} \mathbf{0 0 0}$ | $\mathbf{1 9 9 8}$ <br> troy <br> ounces ${ }^{\prime} \mathbf{0 0 0}$ | $\mathbf{1 9 9 8}$ <br> BGN ${ }^{\prime} \mathbf{0 0 0}$ |
| :--- | :---: | ---: | ---: | ---: |
| Gold bullion in standard form | 1,031 | 515,611 | 1,031 | 496,368 |
| Gold in other forms | 252 | 126,177 | 262 | 126,215 |
| Other precious metals | - | 90,813 | - | 74,441 |
| Total |  | 732,601 |  | 697,024 |

Gold in other forms includes gold held with correspondents. This gold earns interest at rates between $1 \%$ and $2 \%$ per annum.

## 9. Securities

|  | $\begin{gathered} 1999 \\ \text { BGN '000 } \end{gathered}$ | $\begin{gathered} 1998 \\ \text { BGN '000 } \end{gathered}$ |
| :---: | :---: | :---: |
| Market value of trading securities |  |  |
| Foreign treasury bills, notes and bonds | 4,216,004 | 1,438,657 |
| Forward foreign exchange contracts | - | 30 |
| Total market value of trading securities | 4,216,004 | 1,438,687 |
| Cost of investment securities |  |  |
| Foreign treasury bills | 155,485 | 133,748 |
| Total | 4,371,489 | 1,572,435 |

Investment securities are US Treasury bills held with the Federal Reserve Bank of New York. These are held as collateral for the annual interest payments under the Front Loaded Interest Rate Bond (FLIRB) portion of the Bulgarian Brady bonds. Interest is earned on these US Treasury bills at approximately $4.1 \%$. These securities have been included as an asset of the Bank as it is not the intention of the government to use these securities in order to extinguish the interest liability.

## 10. Loans to banks and other financial institutions

|  | $\begin{gathered} 1999 \\ \text { BGN '000 } \end{gathered}$ | $\begin{gathered} 1998 \\ \text { BGN '000 } \end{gathered}$ |
| :---: | :---: | :---: |
| Loans to domestic financial institutions: |  |  |
| - in BGN | 131,956 | 144,142 |
| - in foreign currencies | 93,808 | 114,601 |
| Provision for possible credit losses | $(225,751)$ | $(257,393)$ |
| Written down value of loans to domestic banks | 13 | 1,350 |

During the year no interest has been accrued on these loans and they have a theoretical maturity within one year.

## 11. Provision for losses

|  | $\begin{gathered} 1999 \\ \text { BGN '000 } \end{gathered}$ | $\begin{gathered} 1998 \\ \text { BGN '000 } \end{gathered}$ |
| :---: | :---: | :---: |
| Provision against cash and amounts due from banks at 1 January | - | 1,504 |
| Provision against equity at 1 January | 369 | 369 |
| Provision against loans to banks and other |  |  |
| financial institutions at 1 January | 257,393 | 282,278 |
| Provision at 1 January | 257,762 | 284,151 |
| Add charge for the year | - | 768 |
| Less recoveries | $(29,713)$ | $(27,157)$ |
| Less provisions on bad debts written off | $(1,929)$ | -57, - |
| Provision at 31 December | 226,120 | 257,762 |

The provision may be analyzed as follows:

| Provision against loans to banks and |  |  |
| :--- | ---: | ---: |
| other financial institutions | 225,751 | 257,393 |
| Provision against equity investments | 369 | 369 |
| Total | 226,120 | 257,762 |

## 12. Interest receivable

|  | $\mathbf{1 9 9 9}$ <br> BGN ${ }^{\mathbf{0 0 0 0}}$ | $\mathbf{1 9 9 8}$ <br> BGN $\mathbf{~ 0 0 0 ~}$ |
| :--- | :---: | :---: |
| Interest on investments | 73,014 | 15,043 |
| Interest on cash accounts and loans | 1,261 | 2,202 |
| Other | 522 | 632 |
| Total | 74,797 | 17,877 |

## 13. Receivable from the government

|  | $\mathbf{1 9 9 9}$ | $\mathbf{1 9 9 8}$ |
| :--- | :---: | :---: |
|  | BGN ${ }^{\prime} \mathbf{0 0 0}$ | BGN ${ }^{\mathbf{0 0 0 0}}$ |
| Receivable from the government | $2,203,159$ | $1,665,949$ |

The value of the receivable from the government at 31 December 1999 is SDR 825 million (1998: SDR 708 million), see note 25(a).

The receivable bears interest at the same rates as those incurred on the borrowings from the IMF and is repayable as follows:

| Year | BGN ${ }^{\prime} \mathbf{0 0 0}$ |
| :--- | ---: |
| 2000 | 265,623 |
| 2001 | 558,145 |
| 2002 | 422,755 |
| 2003 | 163,000 |
| 2004 | 165,448 |
| 2005 | 139,597 |
| 2006 | 139,597 |
| 2007 | 139,597 |
| 2008 | 139,597 |
| 2009 | 69,800 |
| Total | $2,203,159$ |

The ability of the government to pay according to the repayment schedule will depend on the performance of the Bulgarian economy.

## 14. Equity investments and quota in IMF

|  | $\begin{gathered} 1999 \\ \text { BGN '000 } \end{gathered}$ | $\begin{gathered} 1998 \\ \text { BGN '000 } \end{gathered}$ |
| :---: | :---: | :---: |
| Bulgaria's IMF quota | 1,621,235 | 1,095,611 |
| Equity investments in international financial institutions | 840 | 4,271 |
| Equity investments in Bulgarian institutions | 2,433 | 3,188 |
| Provision against investments in Bulgarian institutions | (369) | (369) |
| Total | 1,624,139 | 1,102,701 |

None of the equity investments in international financial institutions exceeds $10 \%$ of the issued share capital of those entities. The significant equity investments in Bulgarian institutions may be analyzed as follows:

| Name of institution | Holding <br> $\%$ | Principal activity |
| :--- | :---: | :--- |
| Subsidiaries | 100 | Management of cash point machines <br> BORIKA <br> Bulgarian Mint EOOD |
| Bank for Agricultural Credit | 100 | Ming coins |
| Associated companies | 52 | Banking institution in process of <br> liquidation |
| Bankservice AD |  |  |
| International Banking Institute | 36 | Interbank clearing |
| Central Depository | 42 | Financial training and research |
|  | 20 | Agent for government securities |

## 15. Property, plant and equipment

|  | Land and building BGN '000 | Motor vehicles BGN '000 | Fixtures and fittings BGN '000 | Equipment BGN '000 | Assets in progress BGN '000 | Other BGN '000 | Total ${ }_{\text {BGN '000 }}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Cost or valuation |  |  |  |  |  |  |  |
| At 1 January 1999 | 20,154 | 2,096 | 2,417 | 71,132 | 51,805 | 1,273 | 148,877 |
| Additions | 617 | - | 288 | 3,673 | 9,361 | 9 | 13,948 |
| Disposals | (313) | - | (16) | (195) |  | (62) | (586) |
| Transfers | 34,213 | 204 | 140 | 12,591 | $(47,448)$ | 300 | - |
| Revaluation | 2,700 | 45 | 544 | 616 | 201 | 7 | 4,113 |
| At 31 December 1999 | 57,371 | 2,345 | 3,373 | 87,817 | 13,919 | 1,527 | 166,352 |
| Depreciation |  |  |  |  |  |  |  |
| At 1 January 1999 | $(1,013)$ | $(1,202)$ | (574) | $(6,373)$ | - | (91) | $(9,253)$ |
| Charge for the year | $(1,585)$ | (338) | (378) | $(5,900)$ | - | (373) | $(8,574)$ |
| On disposals | 313 | - | 9 | 97 | - | 43 | 462 |
| Reclassification | (389) | 469 | 141 | (231) |  | 10 |  |
| Revaluation | (135) | (22) | (7) | (100) | - | (1) | (265) |
| At 31 December 1999 | $(2,809)$ | $(1,093)$ | (809) | $(12,507)$ | - | (412) | $(17,630)$ |
| Net book value at 31 December 1999 | 54,562 | 1,252 | 2,564 | 75,310 | 13,919 | 1,115 | 148,722 |
| Net book value at 31 December 1998 | 19,141 | 894 | 1,843 | 64,759 | 51,805 | 1,182 | 139,624 |

## 16. Other assets

|  | $\begin{gathered} 1999 \\ \text { BGN '000 } \end{gathered}$ | $\begin{gathered} 1998 \\ \text { BGN '000 } \end{gathered}$ |
| :---: | :---: | :---: |
| Spare parts for printing equipment | 2,394 | 2,279 |
| Prepayments | 39 | 1,200 |
| Inventories | 2,681 | 4,262 |
| Accounts receivable | 1,738 | 833 |
| Precious metal commemorative coins for sale | - | 26 |
| Deferred expenses | 74 | 160 |
| Refund from IMF | 1,007 | - |
| Total | 7,933 | 8,760 |

## 17. Due to banks and other financial institutions

|  | $\begin{gathered} 1999 \\ \text { BGN '000 } \end{gathered}$ | $\begin{gathered} 1998 \\ \text { BGN '000 } \end{gathered}$ |
| :---: | :---: | :---: |
| Demand deposits from banks and other financial institutions |  |  |
| - in BGN | 459,515 | 388,869 |
| - in foreign currencies | 178,597 | 162,567 |
| Total | 638,112 | 551,436 |

The Bank does not pay interest on demand deposits from banks and other financial institutions. Included in demand deposits is BGN 562 million representing the obligatory reserves which all domestic banks are required to maintain at the Bank as part of their current accounts.

## 18. Government deposits and current accounts

|  | $\begin{gathered} 1999 \\ \text { BGN '000 } \end{gathered}$ | $\begin{gathered} 1998 \\ \text { BGN '000 } \end{gathered}$ |
| :---: | :---: | :---: |
| Government current accounts: |  |  |
| - in BGN | 874,733 | 31,248 |
| - in foreign currencies | 162,553 | 204,039 |
| Government deposits accounts: |  |  |
| - in BGN | 434,764 | 158 |
| - in foreign currencies | 1,222,125 | 1,137,448 |
| State Fund for Reconstruction and Development | - | 574,211 |
| Total | 2,694,175 | 1,947,104 |

Government deposits and current accounts with the Bank comprise funds held on behalf of government budget organizations and other government organizations. No interest is payable on the current accounts. Government deposit accounts with the Bank earn interest at or close to market rates in accordance with the Law on the Bulgarian National Bank. The interest rate paid at 31 December 1999 was between $0.4 \%$ and $3 \%$.

## 19. (a) Borrowings against Bulgaria's IMF participation

|  | $\begin{gathered} 1999 \\ \text { BGN '000 } \end{gathered}$ | $\begin{gathered} 1998 \\ \text { BGN '000 } \end{gathered}$ |
| :---: | :---: | :---: |
| Borrowings against Bulgaria's IMF participation | 1,621,226 | 1,095,611 |
| Reserve tranche position | $(87,251)$ | $(76,904)$ |
| Total | 1,533,975 | 1,018,707 |

(b) Borrowings from general resources of IMF

|  | $\mathbf{1 9 9 9}$ <br> BGN '000 | $\mathbf{1 9 9 8}$ <br> BGN $\mathbf{0 0 0}$ |
| :--- | ---: | ---: |
| Compensatory and contingency financing | 170,820 | 150,815 |
| Standby facilities | $1,189,800$ | $1,160,764$ |
| Extended Fund facility | 837,551 | 246,488 |
| Enlarged access | 232,659 | 57,832 |
| Systematic transformation facility | $2,430,830$ | $1,81,058$ |
| Total | $3,964,805$ | $2,885,664$ |
| Total (a) and (b) |  |  |

Borrowings from the IMF are denominated in SDR and amount to SDR 1,518 million at 31 December 1999 (31 December 1998: SDR 1,225 million). Borrowings related to Bulgaria's IMF quota are noninterest-bearing with no stated maturity, while borrowings from the general resources of the IMF bear interest at rates set by the IMF, between $4 \%$ and $5 \%$, and are repayable over a ten-year period.

Borrowings from the IMF are guaranteed by promissory notes which have been cosigned by the government and the Bank. The total promissory notes outstanding as at 31 December 1999 are BGN 3,606 million (BGN 2,962 million at 31 December 1998), see note 29 .

## 20. Other borrowings

|  | $\mathbf{1 9 9 9}$ <br> BGN ${ }^{\prime} \mathbf{0 0 0}$ | $\mathbf{1 9 9 8}$ <br> BGN $\mathbf{~}^{\mathbf{0 0 0}}$ |
| :--- | :---: | :---: |
| Guarantee funds | 31 | 17,792 |
| Other borrowings | 380 | 465 |
| Total | 411 | 18,257 |

21. Currency in circulation

|  | $\begin{gathered} 1999 \\ \text { BGN '000 } \end{gathered}$ | $\begin{gathered} 1998 \\ \text { BGN '000 } \end{gathered}$ |
| :---: | :---: | :---: |
| Coins and currency in circulation |  |  |
| - banknotes | 2,060,403 | 1,839,327 |
| - coins | 22,515 | 5,729 |
| Total | 2,082,918 | 1,845,056 |

The above balances represent the amount of BGN coins and banknotes issued by the Bank other than that held by the Bank itself. The movement of banknotes in circulation is as follows:

|  | $\begin{gathered} 1999 \\ \text { BGN '000 } \end{gathered}$ | $\begin{gathered} 1998 \\ \text { BGN '000 } \end{gathered}$ |
| :---: | :---: | :---: |

## 25. Related party transactions

## (a) Bulgarian government

## International Monetary Fund

All IMF borrowings are undertaken through the Bank. Both the Bank and the government of Bulgaria have borrowings with the IMF. The government's IMF borrowings, as shown on the balance sheet of the Bank, have been matched by a receivable from the government. In order to eliminate any exchange rate movements, the government receivable is denominated in SDR.

The interest on these borrowings is paid by the government. Accordingly no interest revenue is included in these accounts for either the receivable from the government nor is interest expense included on the government's portion of the IMF borrowings, see note 13 .

The IMF quota is supported by promissory notes jointly signed by the Bank and the government, see note 19(b).

## Government bank accounts

Government budget organizations and other government organizations have current accounts and term deposits with the Bank. No interest is payable on current accounts from government budget organizations, see note 18 .

## Equity investments

The Bank has participations in various international financial institutions, including the Bank for International Settlements, see note 14.

## (b) Domestic equity participations

## Bank accounts

The Bank holds deposits from its investments in local entities in accordance with the Law on the Bulgarian National Bank, see note 14.

## 26. Foreign currency positions

The amounts of assets and liabilities held in BGN and in foreign currencies can be analyzed as follows:

|  | BGN | Foreign currencies | BGN | Foreign currencies |
| :---: | :---: | :---: | :---: | :---: |
|  | $\begin{gathered} 1999 \\ \text { BGN '000 } \end{gathered}$ | $\begin{gathered} 1999 \\ \text { BGN '000 } \end{gathered}$ | $\begin{gathered} 1998 \\ \text { BGN '000 } \end{gathered}$ | $\begin{gathered} 1998 \\ \text { BGN '000 } \end{gathered}$ |

## 28. Financial instruments

A financial instrument is defined by IAS 32 as any contract that gives rise to both a financial asset of one enterprise and a financial liability or equity instrument of another enterprise.

The balance sheet of the Bank is largely comprised of financial instruments. These instruments expose the Bank to many risks, including interest rate risk, foreign exchange risk and credit risk.

## Interest rate risk

Interest rate risk may be defined as the risk that the Bank is exposed to changes in the value of its financial assets and liabilities due to changes in interest rates. The size of this risk is a function of:

- the relevant financial asset or liability's underlying interest rate; and
- the maturity structure of the Bank's portfolio of financial instruments.

A majority of the financial assets of the Bank are interest bearing. The financial liabilities of the Bank include liabilities which are both noninterest-bearing and interestbearing. These have been disclosed in notes 17 to 22 . Those assets and liabilities of the Bank which are interest-bearing are based on rates which have been set at or close to market levels.

The maturity structure of the Bank's financial assets and liabilities is disclosed in Note 27.

## Foreign exchange risk

Foreign exchange risk may be defined as the risk that the Bank is exposed to changes in the value of its financial assets and liabilities due to changes in exchange rates. The size of this risk is a function of:

- the mismatch in the Bank's foreign currency assets and liabilities; and
- the underlying contract rate of outstanding foreign exchange transactions at year end.

The exchange rate of the Bulgarian lev to the Deutschemark is fixed in accordance with the Law on the Bulgarian National Bank. In accordance with the Law on the Bulgarian National Bank, the Bank is required to match foreign currency assets and liabilities other than Deutschemarks, to within $2 \%$. Accordingly, foreign exchange exposure is limited

## Credit risk

Credit risk is defined by IAS 32 as the risk that one party to a financial instrument will fail to discharge an obligation and cause the other party to incur a loss. Disclosure of credit risk enables the user of financial statements to assess the extent to which failures by counterparts to discharge their obligations could reduce the amount of future cash inflows from financial assets on hand at the balance sheet date.

The size and concentration of the Bank's exposure to credit risk can be obtained directly from the balance sheet and notes 7 to 14 of the financial statements which describe the size and composition of the Bank's financial assets. In accordance with the Bulgarian Law on the National Bank, the Bank deals only with financial institutions that have been assigned one of the two highest ratings by two internationally recognized rating agencies. The Bank has not entered into collateral agreements in relation to its credit exposure.

## Fair value

Fair value information is widely used in determining an enterprise's overall financial position and in making decisions about individual financial instruments. It is also relevant to users of financial statements since, in many circumstances, it reflects the judgment of the financial markets as to the present value of expected future cash flows.

The principal determinants of fair value for the Bank's assets and liabilities are commodity prices, interest rates, exchange rates and credit risk. In the case of marketable assets such as precious metals and foreign debt securities full fair values as at the balance sheet date are directly reflected in the balance sheet. In other cases the exchange rate element is specifically allowed for in the determination of carrying value. The fair values of loans and deposits, insofar as this is determinable by interest rates, are not considered to be materially different from their carrying values. Where significant credit risk is considered to be present, it is allowed for in the provision for bad and doubtful debts.

As at the balance date the Bank did not have any significant exposure in off-balancesheet derivative transactions.

## 29. Commitments and contingencies

As at 31 December 1999 the Bank had BGN 0.2 million of commitments to purchase fixed assets.

The Bank has uncalled capital on its investment in the Bank for International Settlements amounting to 6,000 shares of 2,500 gold francs each.

The BNB is defending a law suit from a construction company for breach of contract. Whilst the Bank does not admit liability, if the law suit is successful, the contingent liability, fines and legal costs could amount to CHF 0.12 million.

There are two court decisions in favor of the construction company which require the Bank to pay compensation of BGN 0.3 million. However, the Bank has not paid this amount and has filed a law suit against the company for CHF 0.4 million.

The IMF quota and borrowings are supported by promissory notes jointly signed by the Bank and the government amounting to BGN 3,606 million (1998:BGN 2,962 million).

Otherwise, there were no other outstanding guarantees, letters of credit or commitments to purchase or sell either gold, other precious metals or foreign currency.

## 2. Report on the Execution of the BNB Budget

In 1999 the BNB continued to reduce operating expenses irrespective of the additional expenditure associated with the redenomination of the national currency, development of the payment system, creation of a credit register and expenditure on the Millennium Bug.

The BNB budget for 1999 was adopted by the 38th National Assembly on 17 December 1998 pursuant to Article 86 of the Constitution of the Republic of Bulgaria and Article 48 of the Law on the Bulgarian National Bank. BNB structure includes two sections and assumes an exchange rate of BGL 1,800 per USD 1 and expected average annual inflation rate of $9.5 \%$ and $7.4 \%$ by the year's end. Throughout the year the BNB Board exercised its right to vary particular indicators within the total budget but by not more than $20 \%$.

Projected expenditure on BNB current activity totaled BGN 52,747,000 and reported expenditure accounted for BGN 45,617,000, or $86.5 \%$.

Expenditure projected on banknote printing and coin mintage of circulating and commemorative coins associated with the national currency redenomination in 1999 totaled BGN 18,067,000; of this BGN 17,041,000 (or $94.3 \%$ ) was used. Costs of banknote printing and circulating coin mintage were calculated to ensure normal service of the currency in circulation. In 1999 the following commemorative coins were minted: 120 Years BNB (gold); 120 Years Council of Ministers (gold and silver); A Plovdiv House (silver); High Jump (silver); and Monk Seal (silver).

Expenditure projected on materials, services and depreciation totaled BGN 20,695,000; of this BGN 15,645,000 (75.6\%) was utilized. Economized funds reflected mostly unused resources on materials for the General Securities Department at the BNB Printing Works. This was attributable to postponed printing of new identity documents subject to finalization by the Ministry of Internal Affairs.

In accordance with the BNB policy of cutting operating expenses, projected funds for heating, electricity, postal, telephone and other services have not been entirely utilized.

Approximately $80 \%$ of projected funds on Bloomberg, Telerate, Reuters and other systems used by the Bank were utilized during 1999. Projections for 2000 include two job reductions in the Telerate system. From the funds projected on equipment maintenance only $62.8 \%$ were used. During 1999 expenses on overhauls of the BNB building's west wing above the operations hall (for the BNB museum) and the BNB Plovdiv and Vratza branches made up only a portion of projected funds on overhauls.

Projected depreciation expenses accounted for BGN 8,857,000 and reported costs amounted to BGN $8,574,000$, or $96.8 \%$.

Expenses on salaries and employee benefits made up $34.3 \%$ of Bank total operating expenditure.

Other administrative expenses reported for 1999 totaled BGN 855,000, or $71.5 \%$ of projected costs. The BNB spent money on travel associated with cash supply for commercial banks and their branches due to the lev redenomination. Expenses were incurred on BNB employees' training in Bulgaria and abroad. The BNB took the opportunity of any reasonable invitation from other central banks and institutions for staff training.

## Investment Expenses

Budgeted investment expenses totaled BGN 24,562,000. Of this, BGN 13,272,000 (54\%) was spent in 1999. Expenses on construction, reconstruction and modernization were incurred on the final reconstruction of BNB's Bourgas branch. Refurbishment of the BNB main building started in 1998 and continued in 1999.

Expenses on machines servicing currency in circulation accounted for $96.9 \%$ of budgeted funds. No funds are budgeted for 2000 as the necessary equipment was supplied in 1999.

Compared with previous years expenditures on the BNB's Printing Works were
reduced and only funds for finishing the security fence and the premises' fire alarm and fire-extinguishing systems had been budgeted. Investment expenditures incurred on the BNB Printing Works accounted for $14 \%$ of BNB total investment expenditures (against $58.6 \%$ in 1998).

Budgeted funds for the purchase of special automobiles and other vehicles have not been spent and these funds have been carried over to 2000.

In 1999 replacement of individual obsolescent computers, software and other equipment continued, consistent with the Bank's equipment rollover program. Expenses incurred on computerization accounted for just $32.8 \%$ of projected funds.

Expenses on office furniture and equipment made up $65.4 \%$ of projected spending. The expenses reflected planning and furnishing of the BNB's Bourgas branch, the purchase of a computer typesetting system, a multifunction printing machine for the printing center, and furniture for the canteen in the BNB's main building.

## EXECUTION OF BNB BUDGET IN 1999

| Indicators | Budget <br> forecast for 1999 (BGN '000) | Reporting, 31 December 1999 <br> (BGN '000) | Execution (\%) |
| :---: | :---: | :---: | :---: |
| Section I. BNB operating expenses |  |  |  |
| Currency circulation expenses | 18,067 | 17,041 | 94.3 |

* Analytical reporting of the balance of payments in accordance with IMF 5th edition of the Balance of Payments Manual.
${ }^{2}$ Data based on customs declarations provided by the Computing Center Directorate within Information Service AD and the NSI, and adjusted by the BNB for date of customs clearance. March 2000.
Data of the Ministry of Internal Affairs and estimates of the Ministry of Economy and
Including data provided by the Agency for Foreign Aid and the Bulgarian Red Cross.
${ }^{6}$ A minus sign denotes flight of capital (increase in assets or decrease in liabilities).
${ }^{8}$ DIS data is used for 1998 and the January - September period of 1999 . For the 1999 October - December period BNB data is used.
${ }^{9}$ Including changes in forex deposits of individuals and private companies, net of valuation adjustments. A minus sign denotes a decrease of deposits and a positive sign an increase.
${ }^{10}$ Excluding changes in BNB forex reserves due to valuation adjustments. A minus sign denotes an increase of forex reserves and a positive sign a decrease. ${ }^{11}$ Including loans extended for balance of payments support (incl. EU, the World Bank, etc.). Source: BNB.

* MF securitized direct debt to the BNB
* MF data on Sections II and IV and domestic government guarantees assumed.

Actual amount of the debt on government securities.
Debt on government securities does not include government securities on the MF account (restructured debt and target programs).
The lev equivalent of the debt denominated in foreign currency in columns 1 and 4 is calculated on the basis of the exchange rate of the relevant currency against the lev at the end of month:

- 31 December 1998: USD/BGN 1.6751, SDR 1/BGN 2.35648
- 31 December 1999: USD/BGN 1.94687, SDR 1/BGN 2.66906, EUR 1/BGN 1.95583

The lev equivalent of USD-denominated government securities under ZUNK in column 3 is the difference between the lev equivalent in column 1 and column 4.
The lev equivalent (columns 2 and 3) of direct debt in SDR, guaranty government securities denominated in USD and government securities denominated in EUR is based on the exchange rate of the relevant currency against the lev on the day of payment.

# Major Resolutions of the Managing Board of the BNB in 1999 

15 April Amendments to Regulation No. 5 of 1998 of the MF and the BNB on the Terms and Procedure for Issuance, Acquisition and Redemption of Book-entry Government Securities were adopted.

17 May Exchange rates of currencies other than those included in the EMU were to be rounded to six digits. For currencies whose exchange rate to the lev is lower than BGL 1, the number of foreign units obtainable for one Bulgarian lev must be set so that the first figure after the decimal point to be different from zero, and for the rest of the currencies: for a unit of foreign currency.

11 June Pursuant to Article 25 of the Law on the BNB and in connection with the Law on Redenomination of the Bulgarian Lev, as of 5 July 1999 the Bulgarian National Bank put into circulation as legal tender the following banknotes and coins: banknotes of BGN 1, 2, 5, 10, 20, and 50 nominal value, issue 1999; coins of 1, 2, $5,10,20$ and 50 stotinkas nominal value, issue 1999.

17 June Regulation No. 25 issued under § 4, para. 2 of the Transitional and Final Provisions of the Law on Redenomination of the Bulgarian Lev was adopted.

All figures in old levs indicated in the tariffs applied by the Bulgarian National Bank which had entered into force before 5 July 1999, as well as in other internal rules of the BNB, and in all resolutions of BNB Managing Board effective after 5 July 1999 were to be replaced by 1,000 times reduced figures in new levs.

As of 5 July 1999 a new code of the Bulgarian lev, BGN, was adopted. This code is not binding. The replacement of BGL by BGN is not obligatory for any institution as of 5 July 1999.

2 July As of 5 July 1999 the BNB put into circulation a gold commemorative coin ' 120 Years Council of Ministers' with a nominal value BGN 100, issue 1999, and a silver commemorative coin '120 Years Council of Ministers' with a nominal value BGN 10, issue 1999.

8 July The Managing Board of the BNB approved a list of documents from the BNB secret fund for the period 1945-1989 to be disclosed, accessible to the public after 1 September 1999.

A 20-year prescriptive term was set for all the secret documents from the BNB fund, effective as of the date of document creation; after the expiry of that term secret documents may be disclosed automatically. The 20-year term is not valid for: documents which represent official secret at the BNB and are included in the list of facts, information, documents and items related to the procedure and manner of producing, safekeeping and transportation of banknotes and coins, in respect of which terms longer than 20 years apply; and documents of other institutions with a specific indication that they may not be disseminated without the prior consent of the document issuing institution.

CB were recommended to adopt a 20-year period for the automatic disclosure of their documents; simultaneously they should disclose documents created until 1989, which are not considered secret as of present date.

Three volumes of archive documents of the BNB were to be published jointly with the General Archives Office to the Council of Ministers for the periods 1915-1929; 1930 - 1947 and from 1948 onward. Thus the publication of a full corpus of archive BNB documents, including the collection of volumes for the periods 1879 - 1900 and 1901-1914, would be completed.

15 July As of 23 July 1999 the BNB put into circulation a silver commemorative coin EURO ‘A Plovdiv House’ with a nominal value BGN 10, issue 1999.

16 September As of 23 September 1999 the BNB put into circulation a silver commemorative coin on ecological subject 'Wild Animals: Monk Seal' with a nominal value BGN 10, issue 1999.

21 October Regulation No. 7 on the Big Exposures of Banks was adopted.
Amendments to BNB Regulation No. 9 on the Evaluation of Risk Exposures of Banks and the Allocation of Provisions to Cover the Risk Related Thereto were adopted.

9 December As of 15 December 1999 the BNB put into circulation a gold coin commemorating the new millennium 'The Virgin Mary with Infant Christ' with a nominal value BGN 20, issue 1999.

As of 22 December 1999 the BNB put into circulation a silver coin commemorating the Twenty-seventh Summer Olympic Games, Sydney, 2000, 'High Jump' with a nominal value BGN 10, issue 1999.

Regulation on Foreign Exchange Transactions of Brokerage Financial Houses was adopted.

Regulation on the Registration by the Bulgarian National Bank of Transactions between Residents and Nonresidents was adopted.

Regulation on the Export and Import of Lev and Foreign Exchange Cash, Precious Metals and Precious Stones was adopted.

Regulation on Transborder Transfers and Payments was adopted.
Regulation on the Terms and Procedure for the Submission of Reports and Declarations on the Liabilities of Residents and Nonresidents was adopted.

Regulation on the Collection of Information on the Balance of Payments Statistics was adopted.

Amendments to Regulation No. 3 on Payments were adopted.
20 December Internal Rules of the Procedure for Issuance of Permits to Export Lev and Foreign Exchange Cash were adopted.

Internal Rules of the Procedure for Registration of Transactions between Residents and Nonresidents were adopted.

[^0]:    * By Resolution of the National Assembly of 11 June 1999, upon expiry of Valentin Tzvetanov' term of office, Bojidar Kabakchiev was elected Deputy Governor, Head of the Banking Department and BNB Managing Board member.

[^17]:    ${ }^{25}$ To ensure precise monitoring of changes and their dynamics within the system, in 1999 commercial banks were reclassified into five groups from the previous three. This was intended to improve the precision of market share surveys, the nature of business profile, and comparability in terms of supervisory regulations. Based on these criteria commercial banks were divided into four classification groups according to balance sheet size: Group I - over BGN 500 million; Group II - from BGN 300 million to BGN 500 million; Group III - between BGN 100 million and BGN 300 million; and Group IV - up to BGN 100 million; Group V comprises foreign banks' branches.
