	ISBK9370	IŞBANK AG, SOFIA BRANCH

* Banks are classified only for statistical purposes. The group classification does not imply banks' financial performance evaluation and it should not be interpreted as a rating system. The position of the banks in individual groups depends on the amount of their assets and changes at the end of each reporting period.

Group I: the five largest banks.
Group II: the rest of the banks.
Group III: foreign bank branches in Bulgaria.

1.23. GOVERNMENT SECURITIES YIELD AND LONG-TERM INTEREST RATE FOR CONVERGENCE ASSESSMENT PURPOSES

		Yield on BGN-denominated interest-bearing government securities on the secondary market[1]				Long-term interest rate[5]
		3 years[2]	5 years	7 years[3]	10 years[4]	
2014	XII	0.80	1.51	0.80	2.33	2.96
2015	I	0.67	1.26	1.58	1.92	2.95
	II	0.48	0.94	1.87	2.10	2.52
	III	0.63	0.81	0.63	1.24	2.49
	IV	0.61	0.72	-	1.63	2.36
	V	0.49	-	0.62	1.36	2.36
	VI	0.89	1.61	0.81	2.04	2.36
	VII	1.36	2.09	-	2.30	2.36
	VIII	0.92	0.85	-	1.88	2.36
	IX	0.48	0.63	0.36	1.63	2.36
	X	0.45	-	0.34	1.52	2.36
	XI	0.51	1.00	-	1.82	2.99
	XII	0.31	0.46	-	1.79	2.43

[1] The average-weighted effective yield achieved on the secondary market during the reporting period. The yield is calculated using the ISMA formula at ACT/365 day count convention. Government securities are grouped according to their original maturity.
[2] Government securities with a maturity of three years also include issues of three years and six months.
[3] Government securities with a maturity of seven years also include issues of seven years and three months.
[4] Government securities with a maturity of ten years also include issues of ten years and six months.
[5] LTIR – Long-term Interest Rate for convergence assessment purposes is determined on the basis of the secondary market yield to maturity of a long-term bond (benchmark) issued by the Ministry of Finance (*Central Government* sector) and denominated in national currency. The ISMA formula at ACT/365 day count convention is used.

* Standard presentation of the balance of payments in accordance with the Sixth Edition of the IMF's Balance of Payments and International Investment Position Manual.

[1] Preliminary data as of 18 January 2015. In compliance with the BNB revision practice and the ECB revision requirements (set out in the ECB Timetable for Exchange of Balance of Payments, International Investment Position and Reserve Assets Statistics within the ESCB) the balance of payments data for December 2015 and revised data for November 2015 are to be published on 17 February 2016. Revised data for October 2015.

[2] Preliminary data of NSI and BNB for 2015. Data based on the methodology of compiling balance of payment statistics.

[3] Based on data provided by banks and direct reporting of services by enterprises.

[4] Estimates following a methodology of the BNB and the NSI.

[5] Estimates following a methodology of the BNB. Data about the number of foreigners who visited Bulgaria and of Bulgarians who travelled abroad are based on information provided by the NSI and the BNB estimation of the receipts/expenditure on one trip.

[6] A minus sign (-) denotes a decrease in assets or liabilities, and a plus sign an increase in assets or liabilities.

[7] Data based on asset/liability principle. Data provided by the companies with international interest, banks, the Central Depository, notaries, the NSI, the Privatization and Post-Privatization Control Agency, *etc.* Data include only reinvested earnings of banks.

[8] Data based on reports of residents' obligations on financial credits to non-residents received at the BNB. Due to quarterly reporting, data are subject to revision.

[9] Bulgaria's external claims on trade credits (advances paid and claims on suppliers). Due to quarterly reporting, data are subject to revision.

[10] Bulgaria's external liabilities on trade credits (received advances and obligations to suppliers) are included. Due to quarterly reporting, data are subject to revision.

[11] Data source: banks, other non-bank financial institutions, insurance corporations and pension funds.

[12] *Other sectors* data provided by the BIS. Data up to June 2015, published in October 2015, are used.

[13] Excluding BNB reserve assets changes due to the exchange rate and price changes, changes associated with the creation of reserve assets (monetarization/demonetarization of gold and allocation of SDR) and reclassifications. A minus sign denotes a decrease in reserve assets and a positive sign an increase.

[14] *Net errors and omissions* represent the difference between the financial account balance and current and capital account balance.

[15] Data compiled in accordance with the directional principle.

Source: BNB.

[1] Preliminary data. Euro equivalent is calculated using exchange rates of respective foreign currencies as of end of period.
[2] Data source: *Register of Government and Government Guaranteed Debt* of the Ministry of Finance. Preliminary data for November 2015 as of 6 January 2016. Excluding debt liabilities of public sector companies and government guaranteed debt.
[3] Including Brady bonds, Eurobonds, global bonds and government securities (denominated in BGN and foreign currency) held by non-residents.
[4] In accordance with the residence concept, government securities issued and held by residents on international financial markets are subtracted from debt.
[5] Data source: banks (including data on private and state-owned banks). Deposits related to contingent liabilities are excluded.
[6] Data on public and private companies, including government guaranteed loans. Intercompany loans are excluded. Data cover only loans registered by the BNB and on which the BNB has received information.
[7] In compliance with the requirements of the *External Debt Statistics, Guide for Compilers and Users*, IMF, 2003, paragraphs 3.14 and 7.5, liabilities related to direct investment are included in the long-term external debt.
[8] Data are included in the *Gross External Debt* amount.
[9] Due to quarterly reporting of firms, data are subject to revisions.
[10] In accordance with the fifth edition of the IMF Balance of Payments Manual, 1993, the amount of SDR allocated in August and September 2009 is reflected only in reserve assets.

[1] Actual external debt disbursements. Preliminary data. Data are recalculated in euro based on monthly average exchange rates of respective foreign currencies.
[2] Data source: *Register of Government and Government Guaranteed Debt* of the Ministry of Finance. Preliminary data for November 2015 as of 6 January 2016. Excluding data on debt liabilities of public sector companies and government guaranteed debt.
[3] This sub-item represents the change in liabilities to non-residents resulting from transactions with residents. The transfer of bonds from residents to non-residents represents an increase in liabilities to non-residents and is reflected with a positive sign.
[4] Data source: banks.
[5] Deposits related to contingent liabilities are excluded.
[6] Including received loans (excluding intercompany loans) declared at the BNB and on which the BNB has received information, as well as government guaranteed loans (Source: *Register of Government and Government Guaranteed Debt* of the Ministry of Finance. Preliminary data for November 2015 as of 6 January 2016).
[7] In compliance with the requirements of the *External Debt Statistics, Guide for Compilers and Users*, IMF, 2003, paragraphs 3.14 and 7.5, disbursements related to direct investment are included in the long-term external debt.
[8] Data not included in the *Gross External Debt Disbursements* table by institutional sector.

[1] Actual disbursements. Preliminary data. Data are recalculated in euro based on monthly average exchange rates of respective foreign currencies.
[2] Data source: *Register of Government and Government Guaranteed Debt* of the Ministry of Finance. Preliminary data for November 2015 as of 6 January 2016. Excluding data on debt liabilities of public sector companies and government guaranteed debt.
[3] In accordance with the residence concept, external debt payments are reduced with payments on securities held by residents and are increased with the securities (issued by residents in the international financial markets) which changed owners from non-residents to residents.
[4] Data source: banks. Deposits related to contingent liabilities are not included.
[5] Including principal and interest payments (excluding intercompany loans) declared at the BNB and on which the BNB has received information, as well as payments on government guaranteed debt.
[6] In compliance with the requirements of the *External Debt Statistics, Guide for Compilers and Users*, IMF, 2003, paragraphs 3.14 and 7.5, disbursements related to direct investment are included in the long-term external debt service.
[7] Data not included in the *Gross External Debt Service* table.

Source: BNB.

[1] Preliminary data as of 30 December 2015. The data are compiled in accordance with the Sixth Edition of *IMF's Balance of Payments and International Investment Position Manual*. The methodological notes on the compilation of the IIP data are published on the BNB's website: www.bnb.bg. Data for the first and second quarters of 2015 are revised.
[2] The euro equivalent is calculated using end of period exchange rates of the respective foreign currencies.
[3] Data based on the asset/liability principle. Data provided by direct investment companies reporting to the BNB, banks, the Central Depository, notaries, the NSI, the Privatization and Post-Privatization Control Agency, *etc*. Data include only reinvested earnings of banks.
[4] Data based on the reports submitted to the BNB by banks and companies which extended loans to non-residents. Due to quarterly reporting, data are subject to revision.
[5] Including data on trade credits and advances-assets (paid advances and receivables from suppliers), reported to the BNB. Due to quarterly reporting, data are subject to revisions.
[6] Including securities issued by non-residents and held by residents. Sources: banks, non-bank financial intermediaries and other financial institutions.
[7] Other sectors data provided by BIS and balance sheet data of other financial institutions. Data up to June 2015, published in October 2015, are included.
[8] Including monetary and non-monetary gold at market prices. Source: Issue Department of the BNB.
[9] Data based on the reports submitted to the BNB by banks and companies which received loans from non-residents. Due to quarterly reporting, data are subject to revision.
[10] Including data on trade credits and advances-liabilities (received advances and payables to suppliers), reported to the BNB. Due to quarterly reporting, data are subject to revisions.
[11] Source: Central Depository AD.
[12] Data provided by monthly reports of banks.
[13] Source: *Register of Government and Government Guaranteed Debt* of the Ministry of Finance. Excluding liabilities of companies in the public sector and government guaranteed debt.
[14] Public and private companies data, including government guaranteed loans. Excluding intercompany loans. Data comprise declared credits for which the BNB has been informed. Due to quarterly reporting, data are subject to revisions.
[15] Including liabilities to the IMF.

Source: BNB.

Overview and Institutional Sectors

Overview

BNB Monthly Bulletin includes data on the state and dynamics of the national economy. It focuses on financial and external sectors since information on these sectors is prepared at the BNB.

Depending on availability, specificity, compatibility and comparability of data, tables and charts may contain information on separate periods (months, quarters, years), as well as cumulative data since early year.

CLASSIFICATION OF INSTITUTIONAL SECTORS IN BULGARIA IN ACCORDANCE WITH ESA 2010

General principles

1. Introduction

The BNB publishes a classification of institutional sectors in accordance with the European System of Accounts 2010 (ESA 2010)[1], which replaces the classification of institutional sectors according to the European System of Accounts 1995 (ESA '95). The need of updating the institutional sector classification arises from the implementation of ESA 2010 that started in the European Union Member States. ESA 2010 is fully harmonized with the latest version of the globally applied System of National Accounts 2008 (SNA 2008)[2].

The classification of institutional sectors is a basic classification used by macroeconomic statistics to characterize economic activities, ways of financing, types of owners and legal forms of independent economic units. Institutional sectors (non-financial corporations, general government, households, *etc*.), created by using this classification, comprise units with sufficiently similar economic behaviour. Structuring of the national economy on the institutional sector level is a major prerequisite in the description of production, primary and secondary distribution of income, investment and financing. This structuring of the national economy allows for making effective macroeconomic analysis.

2. Defining National Economy

2.1. Economic Territory of Bulgaria

The economic territory of Bulgaria covers the geographic territory of the country, within which the Bulgaria's government exercises effective administrative and economic control. It comprises the established free economic zones subject of customs control, as well as the national air-space and territorial waters. It also includes territorial enclaves (embassies, consulates, *etc*. located outside the state borders). The economic territory of Bulgaria does not include other states' territorial enclaves located within the geographic territory of Bulgaria.

2.2 National Economy

A national economy is formed of the units with a centre of predominant economic interests in the economic territory of the country. For each unit the centre of predominant economic interest is the economic territory where this unit performs a prevailing part of its economic activities (for not less than a year). Owners of land and buildings within the economic territory of the country have their centre of predominant economic interest there. Provided a unit performs its economic activities in several countries, it has a centre of economic interest in each of them.

2.3 Rest of the World

The rest of the world institutional sector covers all units with a centre of predominant economic interest outside the economic territory of Bulgaria, including subsidiaries and branches of resident companies related to construction abroad. Supranational and international organizations also fall in this sector.

3. Institutional Units – General Characteristics

An institutional unit is an economic entity characterized by decision-making autonomy in the exercise of its principal function. It compiles or is able to compile a complete set of accounts. An institutional unit is autonomous in its decision-making, if it is entitled in its own right:

- to own non-financial and financial assets, and to effect transactions of their exchange with other institutional units;
- to make economic decisions and engage in economic activities for which it is accountable at law;

[1] Regulation (EU) No 549/2013 of the European Parliament and of the Council of 21 May 2013 on the European System of National and Regional Accounts in the European Union (OJ L 174/2013), in effect from 1 September 2014.

[2] United Nations, European Comission, OECD, IMF, World Bank: System of National Accounts 2008.

- to incur liabilities on its own behalf, and to take on other obligations and commitments and to enter into contracts;
- to draw up a balance sheet, income statement and all other accounting documents required by law.

4. Basis for Determining the Institutional Sector of an Economic Unit

Allocating an economic unit, which has the characteristics of an institutional unit, to an institutional sector is based on the following criteria:

a) type of producer and core business of the unit;

b) control over the unit.

5. Institutional Sectors

For macroeconomic analysis purposes, institutional units are grouped into institutional sectors and subsectors based of the type of their economic behaviour. Each institutional unit belongs only to one institutional sector or subsector.

5.1 Classification of Sectors

The table below presents the classification of institutional sectors.

Table 1. Institutional Sector Structure

Sectors and Subsectors			
Non-financial corporations			S.11
Financial corporations			S.12
Monetary financial institutions (MFIs)	Central bank		S.121
	Other monetary financial institutions (OMFI)	Deposit-taking corporations except the central bank	S.122
		Money market funds (MMFs)	S.123
Financial corporations except MFIs and Insurance corporations and pension funds (IC & PF)	Non-MMF investment funds		S.124
	Other financial intermediaries except IC & PF		S.125
	Financial auxiliaries		S.126
	Captive financial institutions and money lenders		S.127
Insurance corporations and pension funds (IC & PF)	Insurance corporations (IC)		S.128
	Pension funds (PF)		S.129
General government			S.13
Central government (excluding social security funds)			S.1311
State government (excluding social security funds)			S.1312
Local government (excluding social security funds)			S.1313
Social security funds			S.1314
Households			S.14
Non-profit institutions serving households			S.15
Rest of the world			S.2
Member States and institutions and bodies of the European Union			S.21
Member States of the European Union			S.211
Institutions and bodies of the European Union			S.212
Non-member countries and international organizations non-resident in the EU			S.22

The main characteristics of institutional sectors and subsectors are as follows:

S.11 *Non-financial Corporations*

The non-financial corporations sector consists of institutional units which are market producers, and whose principal economic activity is the production of goods and non-financial services. The non-financial corporations sector also includes non-financial quasi-corporations, which are notional institutional units and are separated parts of legally incorporated entities. They have all the characteristics of a separate institutional unit except independence of their decision-making.

The types of institutional units included in this sector are, as follows:

- private and public corporations set up under the general and special legislation;

- cooperatives and partnerships recognised as independent legal entities;
- non-profit organisations serving non-financial corporations;
- head offices of non-financial holdings, controlling and managing on a current basis their subsidiaries, where the preponderant type of activity of the group of corporations as a whole (measured on the basis of value added) is the production of goods and non-financial services;
- private and public quasi-corporations.

S.12 *Financial Corporations*

The financial corporations sector consists of the institutional units that are independent market producers, whose principal activity is the production of financial services. The financial services which they produce include financial intermediation and auxiliary financial services.

Financial intermediation is the activity in which an institutional unit acquires financial assets and at the same time incurs liabilities on its own account by engaging in financial transactions on the market. The assets and liabilities of financial intermediaries have different characteristics, including that funds are transformed or repackaged in relation to maturity, scale, risk, *etc*. in the financial intermediation process.

Auxiliary financial activities are activities, which are closely related to financial intermediation, but differ from it.

What is typical of financial intermediaries is that usually the financial instruments both on the assets and on the liabilities sides of their balance sheets are negotiable in financial markets. The financial corporations sector also includes the head offices of financial holding companies and non-profit institutions serving the financial business.

This sector also includes the so-called captive financial institutions and money lenders when they are independent institutional units. These are resident holding companies that are not engaged in managing their subsidiaries (regardless of which sector these subsidiaries are classified in), as well as individual corporate lenders.

The financial corporations sector comprises nine subsectors: central bank (S.121); deposit-taking corporations except the central bank (S.122); Money Market Funds (MMFs) (S.123); investment funds other than MMFs (S.124); other financial intermediaries except insurance corporations and pension funds (S.125); financial auxiliaries (S.126); captive financial institutions and money lenders (S.127); insurance corporations (S.128); pension funds (S.129).

S.121–S.123 *Monetary Financial Institutions (MFIs)*

This group of subsectors consists of the central bank and the other monetary financial institutions carrying out economic activity under the Law on Credit Institutions[3], Article 2, paragraphs 1 and 2, which are engaged in financial intermediation, mostly by receiving deposits and granting loans. These institutions may also carry out other financial activities, such as trade in securities for their own account or for account of their clients.

S.121 *Central Bank*

The central bank subsector consists of all financial corporations whose principal function is to issue currency, to maintain the internal and external stability of the national currency and to manage all or part of the international reserves of the country.

This subsector includes only the Bulgarian National Bank.

S.122 *Deposit-taking Corporations Except the Central Bank*

The deposit-taking corporations except the central bank subsector includes all financial corporations except those classified in the central bank subsector, which are principally engaged in financial intermediation and whose business is to receive deposits and/or close substitutes for deposits from institutional units other than MFIs, and, for their own account, to grant loans and/or to make investments in securities.

More specifically, this subsector includes all Bulgaria-resident banks and bank branches of non-resident banks which according to the European Central Bank's criteria are monetary financial institutions, except the BNB. This subsector does not include money market funds.

[3] Law on Credit Institutions (adopted by the 40th National Assembly on 13 July 2006, published in the Darjaven Vestnik, No. 59 of 21 July 2006, in effect from the day when the Treaty of the Republic of Bulgaria's Accession to the European Union came into effect; amended, No. 105 of 2006; amended, Nos. 52, 59 and 109 of 2007; amended, No. 69 of 2008; amended, Nos. 23, 24, 44, 93 and 95 of 2009; amended, Nos. 94 and 101 of 2010; amended, Nos. 77 and 105 of 2011; amended, Nos. 38 and 44 of 2012; amended, No. 52 of 2013; amended, No. 70 of 2013; amended, No. 109 of 2013; amended, No. 22 of 2014; amended, Nos. 27, 35 and 53 of 2014; amended, Nos. 14, 22, 50 and 62 of 2015; amended, No. 94 of 2015).

S.123 ***Money Market Funds (MMFs)***

The main economic activity of MMFs is to issue shares/units which by their economic and legal characteristics are close substitutes of deposits, as well as debt securities. They invest the collected funds primarily in highly liquid low-risk financial instruments, such as short-term negotiable securities, deposits, and shares/units of other MMFs.

S.124 ***Investment Funds Other Than MMFs***

The investment funds other than MMFs subsector consists of open-ended or closed-ended investment companies and funds. Their principal activity is to issue shares (units) that are not close substitutes of deposits. They invest for their own account primarily in long-term financial instruments and non-financial assets (usually land and real estate).

S.125 ***Other Financial Intermediaries Except Insurance Corporations and Pension Funds***

The other financial intermediaries except insurance corporations and pension funds subsector includes institutional units engaged in financial intermediation, whose liabilities differ from deposits or investment funds shares/units, or are related to insurance and pension schemes. These financial intermediaries invest predominantly in long-term financial assets. The main types of units classified within this subsector are as follows:

- investment funds and other similar investment companies, including Special Investment Purpose Joint Stock Companies (SIPJSCs), investing both in real estate and receivables;
- leasing and factoring companies;
- entities predominantly engaged in lending, and pawnshops;
- entities providing other financial services (activities of the so-called investment intermediaries).

S.126 ***Financial Auxiliaries***

The financial corporations engaged in auxiliary financial activity subsector consists of all resident corporations and quasi-corporations which are engaged in activities closely related to financial intermediation but which are not financial intermediaries themselves. This subsector includes financial head offices which are independent units. Their principal activity is to oversee and control the group of corporations, even to run the business on an ongoing basis. This subsector includes:

- loan brokers, securities brokers, investment advisers;
- insurance brokers, insurance and pension consultants;
- corporations which arrange transactions in derivative and hedging instruments (swaps, options, futures), without issuing them;
- corporations providing infrastructure for financial markets;
- supervisory authorities of financial intermediaries and financial markets when they are separate institutional units;
- managers (administrators) of investment companies, pension funds, contract funds, mutual funds;
- Bulgarian Stock Exchange – Sofia;
- Bulgarian Deposit Insurance Fund (BDIF);
- non-profit institutions serving financial corporations (Association of Banks in Bulgaria (ABB), Association of Bulgarian Insurers);
- entities technically executing payments between buyers and sellers (BORICA – Bankservice AD);
- head offices of financial holding companies which control and run on an ongoing basis their subsidiaries.

S.127 ***Captive Financial Institutions and Money Lenders***

The captive financial institutions and money lenders subsector consists of all those financial corporations which are engaged neither in financial intermediation, nor in providing financial auxiliary services. Actually this subsector includes financial institutions that carry out their business in a limited scope, for example within a certain group of corporations. The subsector principally also includes units granting loans exclusively with own funds or only to one client, and incur the full financial risk of debtor's default. At present the institutional units included in this subsector in Bulgaria are holding companies that hold controlling-levels of equity (shares or units) issued by their subsidiaries and whose principal activity is owning the group without performing any managerial functions or providing any other services to their subsidiaries. Holding companies fall within this subsector of financial corporations only when they are independent institutional units and do not belong to another parent (financial) corporation.

S.128 *Insurance Corporations*

The insurance corporations subsector consists of all financial corporations which are principally engaged in financial intermediation as a consequence of the pooling of risks.

This subsector includes all insurance and reinsurance corporations whose principal activities are general insurance and life insurance, as well as reinsurance.

S.129 *Pension Funds*

The pension funds subsector includes corporations engaged in financial intermediation as the consequence of the pooling of social risks and needs of the insured persons (so-called social insurance). Pension funds as social security schemes provide to their clients income upon retirement and in certain cases benefits for death and disability.

The subsector consists of resident institutional units engaged in individual pension insurance on a voluntary basis. The subsector does not include the National Social Security Institute which runs and performs compulsory pension insurance activities.

S.13 *General Government*

The units of the general government sector produce services for the public in general or for certain public segments (public services) related to the overall distribution of income and wealth; guarantee and perform the operation of the state administrative, social and economic system of the country. The activities of the general government sector are financed mainly by taxes and other compulsory payments made by units belonging to other institutional sectors.

The general government sector includes all institutional units which produce other non-market output intended for individual and collective consumption.

The types of institutional units included in sector S.13 are the following:

- units conducting and financing activities of producing non-market output intended for individual or collective final consumption;
- corporations or quasi-corporations, controlled by the central government or municipalities, whose output is mainly non-market;
- non-profit institutions servicing other units classified under this sector, which produce other non-market output and are controlled and financed mainly by the general government;
- institutions which administer the social security funds set up by the state.

According to ESA 2010 the general government sector includes the following subsectors: central government (S.1311); federal government (S.1312); local government (S.1313); social security funds (S.1314). In Bulgaria the general government sector consists of subsectors S.1311, S.1313, and S.1314.

S.1311 *Central Government*

The central government subsector includes all bodies and institutions of the legislative, executive and judicial power of the state, and other agencies whose competence extends over the whole economic territory of Bulgaria, except for the administration of social security funds. This subsector includes a limited number of non-financial corporations controlled by the central government whose output is mainly non-market, as well as non-profit institutions controlled and basically financed by the central government.

S.1313 *Local Government*

The local government subsector includes municipality administrations whose competence extends to only the respective part of the country's economic territory, apart from local agencies of social security funds. The subsector includes a limited number of non-financial corporations which are controlled by municipality administrations and whose output is mainly non-market, as well as those non-profit institutions which are controlled and mainly financed by municipalities and whose competence is limited to the economic territories of the local governments.

S.1314 *Social Security Funds*

The social security funds subsector includes all central and local institutional units whose principal activity is the performance on a current basis of the state social security and which fulfil each of the following two criteria:

a) by law or by a regulatory act certain groups of the population are obliged to participate in the scheme or to pay contributions; and

b) the general government sector is responsible for the management of the state social security institutions in respect of the settlement or approval of the contributions and benefits independent from this role as supervisory body or employer.

The subsector includes the National Social Security Institute and the National Health Insurance Fund.

S.14 ***Households***

The households sector consists of individuals or groups of individuals as consumers or non-corporate producers of market goods and financial services. In cases where households' economic activities are carried out by corporate units or quasi-corporations, the latter are classified under the non-financial or the financial corporate sector. The households sector also includes individuals or groups of individuals as producers of goods and non-financial services for exclusively own final use.

Households as consumers may be defined as small groups of persons who share the same living accommodation, who pool in part or all their income and wealth and who consume collectively certain types of goods and services, mainly housing and food.

The principal resources of these units are from the compensation of employees, property income, transfers from other sectors, receipts from the disposal of market products and imputed receipt from the output of products for own final consumption.

The households sector includes:

- individuals or groups of individuals whose principal function is consumption;
- persons living permanently in institutions who have little or no autonomy of action or decision in economic matters,
- individuals or groups of individuals whose principal function is consumption and that produce goods and non-financial services for exclusively own final use.

S.15 ***Non-Profit Institutions Serving Households***

The Non-Profit Institutions Serving Households (NPISHs) sector consists of non-profit institutions which are separate legal entities servicing households and which are private producers of other non-market output. Their principal resources (except for ad hoc sales) are voluntary contributions in cash or in kind from households in their capacity as consumers, from payments made by general government and from property income.

The NPISHs sector includes the following main kinds of non-profit institutions:

a) trade unions, professional or learned societies, consumers' associations, political parties, churches or religious societies (including those financed but not controlled by general government), and social, cultural, recreational and sports clubs; and

b) charities, relief and aid organisations financed by voluntary contributions in cash or in kind from other institutional units.

S.2 ***Rest of the World***

The rest of the world sector is a grouping of all institutional units which are non-resident units of the national economy. They are related, through economic links, with resident institutional units insofar as they are engaged in economic transactions and form respective asset and liability balance sheet items. The economic characteristics of the rest of the world sector are reflected in a specific set of accounts drawn from the sector's perspective.

The rest of the world sector is subdivided into two subsectors: Member States and institutions and bodies of the European Union (S.21) and non-EU countries and international organisations non-resident of EU (S.22).

S.21 ***Member States and Institutions and Bodies of the European Union***

Member States and institutions and bodies of the European Union subsector includes euro area Member States (S.2111), non-euro area Member States (S.2112). The European Central Bank is segregated from the institutions and bodies of the European Union in a specific subsector (S.2121). The European institutions and bodies, except the ECB subsector (S.2122) includes for instance the European Parliament, the Council of the European Union, the European Commission, the General Court of the European Union and the European Court of Auditors.

S.21 ***Member States and Institutions and Bodies of the European Union***

S.211 ***Member States of the European Union***

S.2111 ***Euro Area Member States***

S.2112 ***Non-euro Area Member States***

S.212 ***Institutions and Bodies of the European Union***

S.2121 ***European Central Bank (ECB)***

S.2122 ***European Institutions and Bodies, except the ECB***

S.22 ***Non-EU Countries and International Organisations Non-resident of EU***

Non-EU countries and international organisations subsector includes international organisations such as the United Nations, the World Bank and the International Monetary Fund.

The rest of the world sector can be subdivided into subsectors in accordance with the classification of resident sectors (Table 1. Institutional Sector Structure) provided that the main classification by group of countries is retained.

1 Financial Sector

The information presented in this section is from monetary, interest rate and other financial statistics.

I. GENERAL METHODOLOGICAL NOTES ON MONETARY AND BANKING STATISTICS

Monetary Statistics[4]

1. Methodological Concepts and Rules of Monetary Statistics Organisation

Monetary statistics is collected and compiled according to the international statistical standards and meets, to a great extent, the rules of international financial statistics. The most important standards include:

- ✓European System of Accounts (ESA'95) and System of National Accounts (SNA'93);[5]
- ✓Regulation No. 2423/2001 of 22 November 2001 concerning the consolidated balance sheet of the monetary financial institutions sector (ECB/2001/13);
- ✓Money and Banking Statistics Sector Manual (*Manual on MFI Balance Sheet Statistics, April 2012)*;
- ✓Monetary and Financial Statistics Manual, IMF, 2000.

Bulgaria is a subscriber to the Special Data Dissemination Standard (SDDS) developed by the IMF (see the National Summary Data Page on the BNB website: *Statistics* Section, *Data Dissemination Standards*).

Main Rules:

a) Accounting rules – the accounting rules followed by monetary financial institutions are presented in the International Accounting Standards (IAS).[6]

b) Reporting rules:

- ✓Valuation of assets and liabilities – all financial assets and liabilities are reported at market or close to market price. Financial instruments, however, as currency in circulation, deposits, capital and reserves, cash and loans are reported at nominal value.
- ✓Revaluation of foreign currency positions – exchange rates as of end of the period are applied.
- ✓Reporting of loans and provisions – for the purposes of statistics loans are shown on a gross basis until their writing off. Accrued provisions are classified under *Other liabilities*.
- ✓Definition of the reporting period – the reporting period finishes on the last calendar day and if it coincides with a holiday, on the last business day of the month.

c) Economic territory and residency – the economic territory of the country consists of the geographic territory administrated by the government; within this territory, persons, goods and capital circulate freely. The economic territory includes the airspace, territorial waters, and continental shelf lying in international waters over which the country has exclusive rights. Also it includes territorial enclaves, *i.e.* geographic territories situated in the rest of the world and used, under international

[4] Last update as of 23 September 2015.

[5] European System of Accounts – an international framework of accounts for a systematic and detailed description of the country's economy, its components, as well as its relationships with other economies developed by Eurostat. ESA'95 is fully compatible with SNA'93 (a joint paper of the IMF, UN, OECD, the European Commission and the World Bank). ESA'95 focuses primarily on conditions and data necessary for the EU.

[6] Unified national accounting standards harmonized with the international standards, valid until end-2002. After that the International Accounting Standards/International Financial Reporting Standards came into effect.

treaties or agreements between states, by general government agencies of the country (embassies, consulates, military bases, scientific bases, *etc*.), and any free zones.

Residents of the country are defined as institutional units which have a center of economic interest[7] within the economic territory of the country; their residence is on the same territory and they manage a significant output in which they participate or intend to participate.

Branches of resident credit institutions abroad with a center of economic interest on the territory of another country are treated as non-residents. Branches of foreign credit institutions licensed to operate in the country are residents and are included in money-creating sector (see *Sector Table*).

Borderline cases of residency:

1) Bulgarian diplomatic, consular, commercial and other representations, as well as their members and staff, and all Bulgarian citizens working for them who are staying abroad by an appointment of the Bulgarian government, regular servicemen on long-term commission abroad and civil persons from the Ministry of Defence employed in missions, headquarters and bodies of international organizations, as well as the members of their families are deemed residents. The foreign ones are classified as residents of their native countries.

2) The following persons are classified as resident units:

✓Bulgarian citizens staying abroad for education purposes, irrespective of the length of their stay;

✓Bulgarian citizens staying abroad for medical treatment, irrespective of the length of their stay.

The concept of residency is consistent with the Bulgarian Currency Law, ESA'95, and IMF Balance of Payments Manual, 6th edition.

d) Sector distribution – ESA'95 standards of sector classification of institutional units are followed. The main sectors by residency include: *Resident Sector* (S.1) and *Rest of the World* (S.2). The Resident Sector is divided into monetary financial sector, general government sector and non-government sector. Monetary financial sector covers the *BNB* (S.121) and *other monetary financial institutions* (S.122); *general government sector* (S.13) consists of three sub-sectors: *central government* (S.1311), *local government* (S.1313) and *social security funds* (S.1314); *non-government* sector includes *non-financial public corporations* (S.11001), *non-financial private corporations* (S.11002 + S.11003), *other financial intermediaries and auxiliaries except insurance corporations and pension funds* (S.123 and S.124), *insurance corporations and pension funds* (S.125), *households* (S.14) and *non-profit institutions serving households* (S.15). *Non-resident Sector* is divided into *European Union* and *Third countries and international organisations*. The European Union is broken down by euro area and non-euro area Member States, according to the participation of EU countries in the Economic and Monetary Union.

e) Instrumental categories – in the Monetary Survey and Analytical Reporting, indicators are defined in conformity with Regulation (EC) No. 2423/2001 and Manual on MFI Balance Sheet Statistics of the European Central Bank in accordance with ESA'95. Definitions of most of the instruments are given in the corresponding tables in Specific Methodological Notes.

f) Foreign currency distribution – all indicators and instruments are in levs and foreign currency, including euro of the forex component.

g) Maturity structure – for the purposes of statistics financial assets and liabilities are presented according to the original term to maturity (Regulation (EC) No. 2423/2001 of the ECB and ESA'95).

2. Reporting Agents

Reporting agents are Monetary Financial Institutions (MFIs) residing on the territory of the Republic of Bulgaria. These are the BNB and other MFIs. Other MFIs include all credit institutions, including foreign banks' branches, as well as money market funds[8] registered in Bulgaria. Of all credit institutions, 22 are banks licensed to conduct bank operations in Bulgaria and abroad and six are foreign banks' branches. The number of money market funds is seven.

Resident Monetary Financial Institutions (MFIs) are included in the MFIs list of EU Member States. This list is maintained by the ECB on its website: *http://www.ecb.europa.eu*.

3. Basic Framework of Monetary Statistics

Reporting agents submit reports pursuant to Article 42 of the Law on the Bulgarian National Bank and Article 69 of the Law on Credit Institutions.

---

[7] An institutional unit has a centre of economic interest within a country when there exists some location – dwellings, place of production or other premises, which the unit engages or intends to engage in economic activities and transactions for an indefinite period of time or for a definite but longer period of time (according to ESA'95 the period is a year or more).

[8] Included in the scope since February 2007.

Data are collected electronically via BNB's virtual network with the other MFIs.

Monetary statistics framework includes two levels of data compilation and presentation:

- On the first level, the accounting data received from individual reporting agents are aggregated in *analytical reporting* containing comprehensive balance sheet data on the BNB and other MFIs. Analytical reporting of the BNB and analytical reporting of other MFIs aim to provide data classified by residency, sector and instrument.
- On the second level, data from analytical reporting are consolidated into a *monetary survey*. The monetary survey is the main form of monetary statistics and contains a lot of important indicators necessary for macroeconomic analysis. It reveals the mechanism of multiplying the monetary base into aggregate money supply serving transactions in the national economy. Its structure is built so as to facilitate the analysis of broad money and its sources. The monetary survey is accompanied by a detailed presentation of the main elements (by sector and instrument).

4. *Principles of Data Processing*

✓Aggregation – summing up data by balance of all institutional units within a sector or subsector, or of all assets and liabilities in the framework of a particular indicator. For sectors and subsectors, data on financial assets and liabilities are aggregated in instruments (*i.e.* loans classified by sector of debtor and deposits classified by sector of creditor). Further aggregation is used to combine the instruments into indicators.

✓Consolidation – it refers to elimination of stocks and flows that occur between institutional units, residents of the country, where they are grouped. The institutional units consisting of a head office and branches report consolidated data through elimination of claims and obligations between them. (This rule does not apply to consolidation of data between a head office and non-resident branches.) Further consolidation is made in the monetary survey between MFIs.

✓Netting – the general principles set in the international statistical standards; data should be collected and compiled on a gross basis. Despite this fact, some categories of data in the monetary survey are also presented in net form due to their use for analytical needs. In the monetary survey and analytical reporting, the following items are presented in net form: *foreign assets, claims on the central government, other items;* while *gross claims on and gross liabilities to non-residents, central government and other unclassified assets and liabilities* are also shown.

5. *Policy of Revisions and Statistical Processing*

In accordance with the requirements set out in ECB Guideline 2014/15[9], revisions of data may be two types:

✓Monthly – revisions which refer only to data for the period preceding the last reporting period;

✓Quarterly – revisions which refer to the information for periods prior to the last reporting period. Quarterly revisions are made with the publication of the monthly data at the end of the respective reporting quarter, thus, ensuring consistency between monthly and quarterly statistics of the monetary financial institutions.

Revisions of published data are made in the following cases:

✓obtained additional information, reclassifications, improved reporting procedures and correction of errors in the data submitted by reporting agents;

✓change in accounting or statistical standard.

Revisions are marked with the letter **R**. In the case of a change in the standard, historical data are also revised starting from the moment of occurrence of the event or change in the standard.

Upon occurrence of prerequisites for publishing a new indicator – sector, instrument, *etc*. – historical time series are constructed using statistical methods as of the moment of occurrence of the indicator (where appropriate conditions exist).

6. *Publications*

Monthly data are as of the end of the reporting period and are published before the end of the month following the reporting period according to the *Statistical Data Release Calendar* (available on the BNB website: *http://www.bnb.bg*). The press release, publication *Monetary Statistics* and data tables are published at 12:00 h. The database is updated by 17:00 h. on the date of release. Monthly statistical data are also included in periodical publications of the central bank: annual and semiannual reports of the BNB, monthly bulletins. Publications are available on paper and on the BNB website.

[9] Guideline of the European Central Bank of 4 April 2014 on monetary and financial statistics (ECB/2014/15) as amended.

Appendix: **Sector Table**[10]

	Sectors in Bulgaria's monetary statistics		
Money-creating sector	Central bank	S.12 Financial corporations	A financial corporation whose principal function is to issue currency, to maintain the internal and external value of the national currency and to hold the international reserves of the country.
	Other monetary financial institutions		Financial corporations, except those classified in the *central bank* sub-sector, which are principally engaged in financial intermediation and whose business is to receive deposits and/or close substitutes for deposits from institutional units other than monetary financial institutions, and, for their own account, to grant loans and/or to make investments in securities. These are: a) credit institutions - banks and electronic money institutions, and b) money market funds. Money market funds are collective investment undertakings of which the units are, in terms of liquidity, close substitutes for deposits and which primarily invest in money market instruments and/or in MMF shares/units and/or other transferable debt instruments with a residual maturity of up to and including one year and/or in bank deposits and/or which pursue a rate of return that approaches the interest rates of money market instruments.
Money-holding sector	Other financial intermediaries and auxiliaries, except insurance corporations and pension funds		1. Financial corporations, which are principally engaged in financial intermediation by undertaking liabilities in a form, other than: a) money, deposits and/or close substitutes of deposits of institutional units, other than monetary financial institutions; b) insurance and pension reserves. Here are included investment funds, corporations, specializing in lending, leasing corporations, financial houses, loans offices, *etc*. 2. Financial corporations – auxiliaries, which are closely connected with financial intermediation but are not financial intermediaries. Here are included stock exchanges, exchange bureaux, consultants, brokers, *etc*.
	Insurance corporations and pension funds		Financial corporations, which are principally engaged in financial intermediation as the consequence of taking insurance and pension risks (and which incur liabilities in the form of insurance and pension reserves).
	Non-financial corporations		Non-financial corporations, which are market producers, and whose main activity is the production of goods and non-financial services.
	Households		Individuals or groups of individuals as consumers and possibly also as entrepreneurs producing market goods and non-financial and financial services (market producers). The sector includes individuals or groups of individuals as producers of goods and non-financial services for exclusively own final use. The sector also includes sole proprietorship and partnership without independent legal status which are market producers.
	Non-profit institutions serving households (NPISHs)		Non-profit institutions which are separate legal entities, whose main activity is connected with servicing, supporting and assisting households. Their principal resources, apart from those derived from occasional sales, are derived from voluntary contributions in cash or in kind from households in their capacity as consumers, from payments made by *general government* sector[11] and from property income. Here are included trade unions, political parties, foundations, associations, churches or religious societies, social, cultural and sports clubs.

(continued)

[10] Institutional sectors in Bulgaria's monetary statistics totally meet ECB requirements under strict consistency with ESA'95.
[11] NPIs controlled and mainly financed by *general government* are classified in the general government sector.

(continued)

	Sectors in Bulgaria's monetary statistics			Definitions
Money-neutral sector	Central government		S.13 General government	All institutional units, which offer public services, deal with distribution of national income and guarantee the operation of social and economic system. These are ministries, institutions and other central agencies, non-budget funds and administrative departments of the state whose competence extends normally over the whole economic territory, except for the administration of social security funds. Here are included those non-profit institutions which are controlled and mainly financed by central government and whose competence extends over the whole economic territory.
Money-holding sector	Local government			All institutional units, which offer public services, deal with distribution of national income and guarantee the operation of social and economic system locally. This is the local administration, whose competence extends to the economic territory, except for the administration of social security funds. Here are included those non-profit institutions which are controlled and mainly financed by local government bodies and whose competence is restricted to the economic territory of the local government.
	Social security funds			Central and local institutional units whose main activity is to provide social benefits and which fulfill each of the following two criteria: 1) by law or by regulation certain groups of population are obliged to participate in the scheme or to pay contributions; 2) general government is responsible for the management of the institution in respect of the settlement or approval of the contributions and benefits independently from its role as supervisory body or employer.
Non-resident sector	European Union	Euro area	S.2 Rest of the world	All non-resident units[12] which are engaged in transactions with resident institutional units, or have other economic links with resident units. This sector's accounts provide an overall view of the economic relationships linking the national economy with *the rest of the world*. The sector includes such institutional units, which are physically located on the territory of the country. It is divided into two sub-sectors: *European Union* and *Third countries* and international organizations. The European Union is divided into Monetary Union and EU member states non-participating in the Monetary Union, including EU institutions.
		Non-euro area EU member states		
	Third countries and international organisations			

[12] Including institutions of the European Union and international organisations.

II. SPECIFIC METHODOLOGICAL NOTES

The monetary statistics is presented in dynamics in a monetary survey, analytical reporting of the BNB and analytical reporting of other MFIs, and in some additional tables which contain more detailed information. The principle of the organization of all tables is the following: the data is broken down by sector, indicator, national and foreign currency, including euro, instrument and maturity, while the indicators on the asset side are grouped by sector and instrument and on the liability side – by instrument and degree of callability.

Simultaneously monthly sectoral surveys of the BNB and other MFIs are compiled and published. These are static tables presenting the relevant assets and liabilities indicators in a way which allows identification of the sector affiliation of the balance sheets items.

Monetary statistics (dynamic or static) is compiled on the basis of the monthly reporting of the BNB and other MFIs.

In order to prevent disclosure of individual information[13] about a given reporting agent, some indicators are presented on a more aggregated level.

Tables 1.3.1–1.3.4: Monetary Survey and Analytical Reporting

The structure of the monetary survey may be expressed by the following mathematical identity:
net foreign assets + net domestic assets = broad money + long-term liabilities
Net domestic assets include domestic credit, fixed assets and other items (net).
The analytical reporting of the BNB and other MFIs follows the format of the monetary survey.

Indicators

Net Foreign Assets[14] – a balance between gross foreign assets and liabilities of the Monetary financial sector. Gross foreign assets are reported by instrument and include Bulgaria's international reserves and other foreign assets of the BNB and other MFIs. Gross foreign liabilities reflect liabilities of the MFIs to the foreign sector. A split of gross foreign assets and liabilities of the BNB is made in Table 1.3.5: *Foreign Assets and Liabilities* of the BNB.

Domestic credit – incorporates credit to the consolidated general government sector and non-government sector.

Credit to the consolidated *general government* sector includes net claims on the central government and gross claims on local government, and social security funds. Credit to the non-government sector includes gross claims on non-financial corporations, financial corporations, households and NPISHs.

Fixed assets – movable or immovable non-financial assets which monetary financial institutions intend to use over a period longer than one year in their main activity.

Other items (net) – consolidates all components of the balance sheets of the BNB and other MFIs which are not included in the instruments displayed above. They include *Relations between other MFIs (net), Relations between the BNB and other MFIs (net)* and *Other assets and liabilities (net)*. Accrued and overdue interest, derivatives, depreciation, provisions, as well as assets and liabilities which are not included elsewhere are part of the *Other assets and liabilities (net)* item (a part of them is presented in Tables 1.3.7 and 1.3.8: *Memoranda to the Analytical Reporting of the BNB and other MFIs*). The balance on the *Relations between the MFIs (net)* item reflects the float as a result of netting of claims and liabilities between MFIs.

Broad money (money supply) comprises liabilities with money character of MFIs to the resident sector with the exception of the liabilities to the *central government* and the *monetary financial institutions* sector. Monetary aggregate instruments are grouped by liquidity and are presented by currency and sector.

The following monetary aggregates are used: M1, M2, and M3. The M1 monetary aggregate, commonly referred to as narrow money, includes the most liquid instruments used in settlements (currency outside MFIs and overnight deposits in national and foreign currency). The M2 monetary aggregate comprises quasi-money and the M1 monetary aggregate. Quasi-money comprises deposits with agreed maturity of up to two years and deposits redeemable at notice of up to three months (including savings deposits). The least liquid financial instruments include repos, shares/units of MMFs and debt securities issued up to two years, also called marketable instruments. They are denominated in national and foreign currency and together with M2 form the broadest monetary aggregate, M3, commonly referred to as money supply (broad money).

---

[13] In accordance with the requirements of the Council Regulation (EC) No 2533/98 of 23 November 1998 (as amended) concerning the collection of statistical information by the European Central Bank, which are also relevant to national central banks of the European System of Central Banks (ESCB).

[14] Monetary gold, special drawing rights holdings/allocations, claims on interest and interest liabilities in *Net foreign assets* are specific items for the BNB only.

Long-term liabilities and monetary financial institutions – include liabilities of monetary financial institutions with maturity of over two years or with a notice of over three months, as well as capital and reserves. *Capital and reserves* comprise the statutory fund of the banking system, reserves and financial result.

Main Indicators

Assets side:

1. *Repos* – funds extended under agreements for reverse repurchases of securities where one of the parties receives funds against securities sold under a firm commitment to purchase the same or similar securities at a particular price on a fixed future date.
2. *Loans* – financial assets arising to provide borrowers with funds, goods or services. Loan terms (fixed by the creditor or negotiated) are set in a non-transferable document. A loan is an unconditional debt which shall be repaid upon maturity and shall generate income in the form of interest (see Table 1.3.6: Loans to Non-financial Corporations and Households and NPISHs). Margin deposits[15] made by the reporting agents are also included in the *Financial corporations* sector.
3. *Securities other than shares* – includes securities other than shares and other equity which give the holder the unconditional right to fixed income or contractually determined income in the form of coupon payments and/or stated fixed sum at a stated date or dates starting from the issue date till the date set as maturity/redemption date. These securities do not grant the holder any ownership rights and interest over the issuing company. Also included are instruments with the same characteristics but with options for conversion into shares or other forms of ownership. The *securities other than shares* indicator covers various types of bonds and other debt securities of bond nature (which can be discount or promissory notes accepted by other MFIs or other commercial paper, used as a form of short-term investments). Compensatory instruments held by credit institutions are also included in the *non-financial corporations* sector.[16]
4. *Shares and other equity* – holdings of securities which represent property rights in corporations. These securities generally entitle the holders to a share in the profit of corporations and to a share in their own funds in the event of liquidation. *MMFs shares/units* are also included here.

Liabilities side:

1. *Currency outside MFIs* is currency in circulation less other MFIs' vault cash.
2. *Deposits* are funds accepted by monetary financial institutions payable at sight, without any notice, at notice or under other preliminary agreed payment conditions. Deposits are agreed upon between the parties by negotiating the terms of keeping deposit accounts, interest amount (if the agreement provides for interest accrual), terms of payment and sanctions for the parties in case of failure to perform their obligations. These are liabilities of the financial institution.
   - ✓ *Overnight deposits* include deposits without agreed maturity and which are immediately convertible into currency or transferable on demand through banker's order or by cheque without significant restrictions or penalties. One-day deposits are also included in this item.
   - ✓ *Deposits with agreed maturity* are not immediately available as they have an agreed term prior to withdrawal. These deposits cannot be used in settlements and are not convertible into currency without any significant restrictions or penalties. They are broken down by maturity: up to two years and over two years. These include loans received with the exception of those from the IMF.
   - ✓ *Deposits redeemable at notice* include savings deposits and other deposits redeemable at notice. Savings deposits are non-transferable deposits without specified maturity used for safekeeping of funds of households against issuance of a personal savings book or analogous document. These include deposits for house purchase, children's deposits and other deposits. Other deposits redeemable at notice are non-transferable deposits without specified maturity which cannot be converted into cash without any notice. Their conversion into cash is not possible or they can be converted into cash prior to the term of the notice but by imposing a sanction. Non-transferable deposits with specified maturity which can be converted into cash prior to maturity only at notice are also included here.

[15] Deposits made under derivative contracts. They are used as cash collateral, remain in the ownership of the depositor and are repayable when the contract is closed out.

[16] Compensatory instruments include compensatory bills and housing compensatory bills issued under the Law on Compensation of the Owners of Nationalized Properties and registered compensatory bills issued under the Law on the Restitution of Ownership and the Use of Agricultural Lands. These instruments are issued by the government and are freely transferable. Pursuant to the Law on Public Offering of Securities, these are referred to as securities.

3. *Repos* include cash received against securities sold by monetary financial institution under a firm commitment to purchase the same (or similar) securities at a particular price on a fixed future date.
4. *Money market funds shares/units* include shares/unit issued by money market funds.
5. *Debt securities issued* include securities other than shares and other equity issued by credit institutions, generally traded in the secondary market, that do not grant the holder any ownership rights over the issuer's equity. Non-marketable instruments issued (which have not been initially placed through a stock exchange or other official marketplace) and subsequently becoming marketable also belong to this item.

Table 1.3.5: Foreign Assets and Liabilities of the BNB

The table displays claims and liabilities of the BNB to non-residents forming the positions of *Foreign assets* and *Foreign liabilities*.

Instruments

BNB Foreign Assets

Central bank's foreign claims are divided into two groups according to their liquidity – *International reserves* and *Other foreign assets*:

1. *International reserves* include the most liquid foreign assets grouped into three sectors – non-resident banks, non-resident governments and other non-residents. Under a currency board (introduced on 1 July 1997) international foreign exchange reserves are equal to the assets of the Issue Department included in the BNB consolidated balance sheet (described in Article 28, paragraph 3 of the Law on the BNB).

Currency reserves include the following indicators:

- ✓ *Cash* – banknotes and coins held in freely convertible foreign currency;
- ✓ *SDR holdings;*[17]
- ✓ *Monetary gold* consisting of gold bullion in standard form in vault and monetary gold deposited with foreign banks. From 1 July 1997 up to 31 January 2005, pursuant to Article 28, paragraph 3, item 6 of the Law on the BNB, the stock of monetary gold is valued at BGN 500 *per* troy ounce or market value if lower. From 1 February 2005 onwards, monetary gold is valued at market value.
- ✓ *Deposits* – funds in freely convertible currency held by the BNB on accounts with foreign central banks graded by degree of liquidity (overnight deposits, deposits with agreed maturity, deposits redeemable at notice);
- ✓ *Repos* include funds received in the BNB against sale of securities with a commitment of reverse repurchase of the same or similar securities at a particular price on a fixed future date;
- ✓ *Securities other than shares* – debt instruments held by the BNB, issued by non-resident banks, financial institutions and governments, whereof liabilities are assigned one of the two highest ratings by two internationally recognized credit rating agencies, and which are payable in freely convertible currencies with the exception of debt instruments given or received as collateral;
- ✓ *Reserve position in the IMF* – Bulgaria's unconditional right to draw funds from the IMF. This indicator reflects the payment of the forex component in Bulgaria's quota and indicates the balance between the quota and the cash held by the IMF in national currency.[18]
- ✓ *Interest receivable* includes claims on accrued interest on foreign assets, included in international foreign exchange reserves.[19]

2. *Other foreign assets* include less liquid claims on non-residents which after the introduction of the currency board are reported as part of assets of the Banking Department. This position is divided into three sectors (*non-resident banks, non-resident governments* and *other non-residents*) and includes the following instruments:

- ✓ *Deposits* – assets held by other non-residents which are not part of the international foreign reserves;

[17] Special Drawing Rights are reserve assets established by the IMF to supplement its member countries' official reserves. The value of SDR is set on the basis of a basket of reference currencies (the euro, the British pound, the US dollar and the Japanese yen).
[18] The reserve position can be raised to the amount of funds in national currency used by the IMF in transactions with other member states.
[19] A specificity associated with the currency board is that interest receivable and interest payable are reported as part of the *international reserves*, correspondingly as part of Bulgaria's foreign liabilities. Therefore, they are not reported as part of *Other assets* and *Other liabilities* as in other reporting units.

- ✓ *Securities other than shares* – debt securities which are not included in international reserves;
- ✓ *Shares and other equity* represent capital investment in international financial institutions (e.g. BIS, Basel); MMFs shares/units are also included here – these holdings of securities give the owner the right of a share in the capital of a money market fund.

BNB Foreign Liabilities

Foreign liabilities of the BNB reflect the central bank's liabilities to the non-resident sector grouped into *non-resident banks*, *non-resident governments* and *other non-residents*.

Foreign liabilities include the following instruments:

- ✓ *Deposits* – funds, deposited with the BNB by non-residents, payable at sight, without any notice, at notice or under other preliminary agreed payment conditions;
- ✓ *Loans* – interest-bearing credits with a fixed term received from IMF common funds;
- ✓ *SDR allocations;*[20]
- ✓ *Interest payable* – interest payable on foreign liabilities.[21]

Table 1.3.6: Loans to Non-financial Corporations, Households and NPISHs

This table reveals information on loans (their residual value) by type, currency and sector granted by credit institutions. Loans are reported under the *claims on non-government* sector item in the monetary survey and analytical reporting.

Loans are recorded at nominal value – their principal amount, before deduction of provisions, without fees and accrued interest. Accrued interest and fees are included under item Other assets while loan loss provisions are part of the Other liabilities item in the balance sheet of the MFIs.

Data of accrued interest on loans and provisions are available in Tables 1.3.7 and 1.3.8 Memoranda to the Analytical Reporting of the BNB and Other MFIs whereas the coverage of the indicators is described in the methodological notes to these tables.

Types of Loans

1. *By maturity*

- ✓ Short-term loans – loans with an original maturity of one year or less, including overdraft.
- ✓ Loans with maturity of over one to five years – loans with an original maturity exceeding one year but less than five years.
- ✓ Loans with maturity of over five years – loans with an original maturity exceeding five years.

2. *By quality*

- ✓ Regular loans – includes loans with regular performance and non-performing loans past-due up to 90 days with the exception of restructured loans (the categories correspond to 'standard exposures' and 'watch exposures' as defined in the repealed Ordinance No. 9 of the BNB[22]).
- ✓ Bad and restructured loans[23] – in accordance with the ECB statistical requirements,[24] the BNB collects aggregated data for all balance sheet loans, which are restructured or non-performing loans past-due over 90 days (includes the categories 'non-performing exposures', 'loss' and all 'restructured exposures' as defined in the repealed BNB Ordinance No. 9). Detailed data on the loans according to their past-due periods are not collected for the purpose of monetary and interest rate statistics.

  In accordance with the international practice, reporting of monetary statistics differs from supervisory reporting, including the reporting of loans, which are restructured or non-performing. Therefore, the aggregated data on loans which are restructured and non-performing past-due over 90 days do not represent the total amount of non-performing exposures.

  Source of information regarding non-performing exposures is the supervisory data of the BNB. Data are available on the internet site of the BNB under section: *Banking Supervision/ Credit Institutions (Banking Sector)/ Financial Supervision Reports – Data/ Banking System*.

---

[20] Long-term liability to the IMF, counterpart of the Special Drawing Rights.
[21] See footnote 18.
[22] Ordinance No 9 of the BNB of 3 April 2008 on the Evaluation and Classification of Risk Exposures of Banks and the Allocation of Specific Provisions for Credit Risk.
[23] Until 30 June 2006 the indicator includes overdue principal, which is not paid.
[24] Regulation ECB/2001/13 concerning the consolidated balance sheet of the monetary financial institutions sector and Regulation ECB/2001/18 concerning statistics on interest rates applied by monetary financial institutions to deposits and loans *vis-à-vis* households and non-financial corporations.

3. *By purpose*
   - ✓Consumer loans – loans granted for the purpose of purchase of goods and services for personal use of the households;
   - ✓Loans for house purchase – loans extended to households for the purpose of investing in housing for own use or rental use, including building and home improvements;
   - ✓Other loans – all other loans extended to households, including loans for education and medical treatment. Loans for commercial or production purposes and loans to NPISHs are also included in the indicator.

4. *By manner of disbursement*
   - ✓Overdraft – represents debit balance on a current account. Payment of overdraft is automatic upon receipt of funds on current accounts. Both overdrafts with pre-agreed interest terms and amounts and without pre-agreed terms are included.
   - ✓Loans, other than overdraft.

Tables 1.3.7 and 1.3.8: Memoranda to the Analytical Reporting of the BNB and Other MFIs

The memoranda show accrued interest and interest arrears on claims and liabilities by type of instrument, derivatives, as well as all adjusting balance sheet items employed in accounting practices (*i.e.* depreciation and provisions).

Information in the tables is available since December 2001.

Description of Items

Accrued interest is interest receivable/payable accrued that has not matured, recorded on a current accrual basis. According to the analytical reporting this interest is recorded in the *Other assets* and *Other liabilities* item in the monetary survey. A specificity of the BNB analytical reporting is that interest accrued on international reserves and foreign liabilities is recorded in the *Foreign assets* item, correspondingly in the *Foreign liabilities* item.

Provisions include allocated provisions for impairment loss (currently the specific provisions on assets), as well as provisions recognized as liabilities in accordance with IAS and Bulgaria's effective legislation. For statistical purposes, assets subject to provisioning are stated on a gross basis and the allocated provisions are included in the *Other liabilities* item (see *General Methodological Notes*).

Depreciation represents a kind of adjustment to depreciable long-term tangible and intangible assets. In the published information, long-term assets are reported on a gross basis and accrued depreciation is recorded in the *Other liabilities* item.

Derivatives include the gross fair value of all derivatives held by monetary financial institutions and reported in the balance sheet.

Tables 1.4.1 and 1.4.2: Monthly Sectoral Survey of the BNB and Other MFIs

Monthly sectoral surveys show on a gross basis the claims and liabilities of other MFIs and of the BNB so that asset and liability balance sheet items can be identified by sector. Tables are static and contain information on end-of-month balances. Presented data is in compliance with the main principles of sectoral classification and aggregation of instruments into indicators.

1. Sectoral classification – the main principles set out in ESA'95 have been complied with. All items that are not classified by sector as well as MFIs' own claims and liabilities are reported in a separate column as *not allocated*.
2. Financial indicators – the scope and content of the indicators are described underneath respective tables. Some items are more aggregated in comparison with monetary survey and analytical reporting, where a part of the instruments in the liability side is presented with additional breakdowns according to their inclusion in the monetary aggregates.

Specific Features of Monthly Sectoral Survey of the BNB

For the purposes of the table, BNB foreign claims are grouped by sector where foreign assets, included in international reserves, and other foreign assets of the central bank are presented together. Cash in foreign currency, Special Drawing Rights holdings and monetary gold are represented in the *Not allocated* column. Foreign assets grouped according to their liquidity as *international reserves* or *other foreign assets* are represented in Table 1.3.5: *Foreign Assets and Liabilities of the BNB*.

Tables 1.5.1 and 1.5.2: Monetary Aggregates and Their Counterparts – Stocks and Transactions

The tables include data on stocks at the end of the reference period and on financial transactions concluded during the period for monetary aggregates and their counterparts.

A *financial transaction* is a creation, purchase, sale or liquidation of a financial asset or liability. It is calculated by taking the difference between stock positions on end-month reporting dates and then removing all changes which are not consequence of financial transactions. These are reclassifications by sector and instrument, adjustments of reporting errors, price revaluation of securities, write-downs and write-offs of loans, exchange rate adjustments.

Financial transaction = Stock position at the end of the reporting period – Stock position at the end of the previous reporting period – Reclassifications and other adjustments – Exchange rate adjustments – Other revaluations (Write-downs/write-offs of loans, price revaluation of securities).

Interest Rate Statistics[25]

The statistics of the interest rates, applied by the banks, compiled by the BNB, is based on a harmonized methodology for the euro area countries specified in Regulation (EC) № 63/2002 of the European Central bank of 20 December 2001 (ECB/2001/18).[26] This statistics presents information about the interest rates, volumes of new business and outstanding amounts of deposits and loans of the *Non-financial Corporations* and *Households and NPISHs* sectors. The classification by institutional sectors is in accordance with the requirements of the European System of Accounts 1995 (ESA'95).[27]

Data on interbank market indices, BIR and yield to maturity on government securities are also published.

I. LOANS AND DEPOSITS OF THE *NON-FINANCIAL CORPORATIONS* AND *HOUSEHOLDS* AND *NPISHS* SECTORS

Types of interest rates and methods of calculation

The interest rates are effective annual rates. They are average weighted with the volumes of new business throughout the reporting period or with the outstanding amounts as of the end of the reporting period. They include all interest payments on deposits and loans, excluding other charges related to these instruments. The interest rate statistics also presents an *annual percentage rate of charge* which is the total cost of the loan to the borrower expressed as an annual percentage of the amount of the extended loan.

The *annual percentage rate of charge* comprises all interest payments on a loan, as well as all fees, commissions and other charges a client has to pay in order to obtain the loan. It is calculated only for *consumer loans* and *loans for house purchase*.

Interest rate statistics provides information on interest rates and volumes on new business and outstanding amounts:

- *New business* – every new agreement between the client and the reporting agent. New agreements are contracts that specify for the first time the interest rate, maturity and other conditions of the deposit or loan. A new agreement is also every renegotiation of the interest rate, maturity and/or other conditions of an existing contract when the possibility for this renegotiation has not been previously provided in it, as well as the renegotiation of the maturity with the active involvement of the client.
- *Outstanding amounts* – all liabilities of the reporting agents to their clients on deposits and all claims of the reporting agents on loans with the exception of restructured loans and non-performing loans past-due over 90 days (the categories correspond to 'non-performing exposures', 'loss' and 'restructured exposures' according to the repealed Ordinance No. 9 of the BNB[28]).

Breakdown by sector

The interest rate statistics covers loans and deposits of non-financial corporations, households and NPISHs residents of the Republic of Bulgaria.

- *Non-financial corporations* sector (Sector S.11 by ESA'95) – consists of institutional units which are market producers and whose principal activity is the production of goods and/or non-financial services.

---

[25] Last update as of 26 November 2015.

[26] Regulation (EC) No. 63/2002 of the European Central bank of 20 December 2001 concerning statistics on interest rates applied by monetary financial institutions to deposits and loans *vis-à-vis* households and non-financial corporations (ECB/2001/18).

[27] Detailed classification by institutional sectors according to the requirements of the European System of Accounts (ESA'95) is available on the BNB website under *www.bnb.bg/Statistics/Methodological Notes/Institutional Sectors*.

[28] Ordinance No 9 of the BNB of 3 April 2008 on the Evaluation and Classification of Risk Exposures of Banks and the Allocation of Specific Provisions for Credit Risk.

- *Households and NPISHs* sector (Sectors S.14 and S.15 by ESA'95) includes the following subsectors:
  − *Households* sector (Sector S.14) – individuals or groups of individuals as consumers and possibly also as entrepreneurs producing market goods and services (market producers), as well as producers of goods and non-financial services for exclusively own final use. The subsector also includes sole proprietorships and partnerships without independent legal status.
  − *Non-profit institutions serving households* sector (Sector S.15) – separate legal entities, whose principal activity is connected to serving, supporting and assisting households. Their principal resources, apart from those derived from occasional sales, are derived from voluntary contributions in cash or in kind from households in their capacity as consumers, from payments made by the General government sector and from property income. Trade unions, political parties, foundations, associations, churches or religious societies, social, cultural and sports clubs are included here.

Breakdown by instrument

- *Overnight deposits* – deposits without fixed maturity, which are immediately convertible in cash and/or transferable at demand by cheque, banker's order without any restriction or penalty. The instrument also includes deposits up to 1 day. Interest rates and volumes on new business and on outstanding amounts for this instrument coincide.
- *Deposits with agreed maturity* – deposits that are not immediately available as they have an agreed term or other restrictions on their withdrawal. These deposits cannot be used in settlements and they are not convertible in cash without any restrictions or penalties. Time deposits and other deposits with similar characteristics (margin deposits, amounts pledged as collateral, accumulation accounts, amounts blocked in relation to legal proceedings, *etc*.) as well as liabilities on loans are included here.
- *Loans* – claims on funds lent by reporting agents to borrowers as well as claims transferred from third parties. Restructured loans and non-performing loans past-due over 90 days (the categories correspond to 'non-performing exposures', 'loss' and 'restructured exposures' according to the repealed Ordinance No. 9 of the BNB) are not included in the scope of interest rate statistics. Loans are divided into two subcategories: *overdraft* and *loans other than overdraft.*[29] Interest rates and volumes on new business and on outstanding amounts for *overdraft* coincide.

Currency – BGN

Breakdown by purpose of loans (only for the *households and NPISHs* sector)

- *Consumer loans* – loans granted for the purpose of purchase of goods and services for personal use of the households in the consumption of goods and services.
- *Loans for house purchases* – loans extended to households for the purpose of investing in housing for own use or rental use, including building and home improvements.
- *Other loans* – all other loans extended to households, including loans for education and medical treatment. Loans for commercial or production purposes and loans to NPISHs are also included in the indicator.

Breakdown by agreed size of the loan (only for the *non-financial corporation* sector)

- *Loans up to an amount of EUR 1 million* expressed as its BGN equivalent (the limit of EUR 1 million refers to every individual loan).
- *Loans over an amount of EUR 1 million* expressed as its BGN equivalent (the limit of EUR 1 million refers to every individual loan).

Breakdown by agreed period

- *Original maturity* – the initially agreed period of time during which the loan cannot be repaid and the deposit – redeemed without any kind of penalty.
- *Period of initial rate fixation* – the predetermined period of time at the start of a loan contract during which the value of the agreed interest rate cannot change.

Reporting period

The reporting period is one calendar month. End-of-month information is presented for the purpose of interest rate statistics on *outstanding amounts*. Interest rate statistics on *new business* includes data on all new agreements concluded during the reporting period.

[29] Claims on repurchase agreements of the reporting agents are included in the instrument *loans other than overdraft*.

Revision policy

In accordance with the requirements set out in *Guideline ECB/2014/15* [30] revisions of data may be two types:

- Monthly – revisions which refer only to data for the period preceding the last reporting period;
- Quarterly – revisions which refer to information for periods prior to the last reporting period. Quarterly revisions are made with the publication of the data for March, June, September, and December. Thus, consistency between monetary and interest rate statistics is ensured.

Revisions of published data are made in the following cases:

- obtained additional information, incorrect classification, improved reporting procedures and correction of mistakes in the data submitted by reporting agents;
- change in the methodological standards of monetary and interest rate statistics.

Revisions of the data are announced in the press release and are marked with the letter **R** in the respective tables.

Data source

Reporting agents are all banks in Bulgaria, including branches of foreign banks.

II. INTERBANK MARKET

Scope

- *Base interest rate (BIR)* – the BIR for the current month equals the simple average of the values of the index *LEONIA* for the business days of the preceding calendar month.
- Interbank market indices:
  – *LEONIA (LEONIA: LEv OverNight Interest Average)* – an interest rate of BGN overnight unsecured transactions on the interbank market;
  – *SOFIBOR (Sofia Interbank Offered Rate)* – a fixing of the quotes for unsecured BGN deposits offered on the Bulgarian interbank market. It is produced for a set of maturities every business day as an average of the ask quotes provided by a representative panel of banks;

Data processing

Monthly data on indices are calculated as simple average of daily data.

Reporting period

The reporting period is one calendar month.

Data source

Methodology and Financial Markets Directorate of the BNB.

III. YIELD TO MATURITY ON GOVERNMENT SECURITIES. LONG-TERM INTEREST RATE FOR CONVERGENCE ASSESSMENT PURPOSES

Scope

- *Secondary market yield* to maturity on interest-bearing government securities.
- *Long-term interest rate for convergence assessment purposes (LTIR)* is determined on the basis of the secondary market yield to maturity of a long-term government bond (benchmark bond) issued by the Ministry of Finance (*Central Government* sector) and denominated in the national currency. The *LTIR* is calculated in accordance with the requirements of the European Central Bank. Additional information regarding the *LTIR* is published on the web site of the BNB (*Statistics/Monetary and Interest Rate Statistics/ Interest Rate Statistics/Long-term Interest Rate for Convergence Purposes*).

Data processing

- The yield to maturity of government securities is calculated as an average weighted effective yield to maturity on individual transactions between primary dealers of government securities during the reporting period. The yield is calculated using the ISMA formula at ACT/365 day count convention. The securities are grouped by their original maturity.
- The monthly value of the LTIR is the simple average of its daily values.

Reporting period

The reporting period is one calendar month.

Data source

Fiscal Services Department of the BNB – for the yield on government securities.

[30] Guideline of the European Central Bank of 4 April 2014 on monetary and financial statistics (ECB/2014/15) as amended.

IV. DATA DISSEMINATION

The Bulgarian National Bank publishes monthly data on interest rate statistics in a database organised as a set of data series on its website. An archive containing sets of the data series as of the date of publication of a given reporting period is available on the website of the BNB in the *Interest Rate Statistics Archive* subsection.

Selected indicators, representative for the interest rate statistics and organised in tables are published in the electronic issue 'Interest Rate Statistics' and in the semi-annual and annual reports of the BNB.

Data is simultaneously released to all interested parties. The publication dates are announced in the Statistical Data Release Calendar.[31] The press release, electronic issue "Interest Rate Statistics" and data tables are published at 12:00 h. The database is updated by 17:00 h. on the date of release.

V. CONTACTS

Should you have any questions on the data and the applied methodology please do not hesitate to contact the press office of the Bulgarian National Bank (*press_office@bnbank.org*) or Ms. Daniela Dobreva, head of Monetary and Banking Statistics Division (*dobreva.d@bnbank.org*).

2 External Sector

Information on the external sector includes four major categories:
(a) balance of payments;
(b) trade in goods;
(c) debt indicators;
(d) exchange rates.

Balance of Payments[32]

The Bulgarian National Bank is in charge of the compilation of Bulgaria's balance of payments. The legal basis for the balance of payments compilation in Bulgaria is provided for in Article 42 of the Law on the Bulgarian National Bank. Data for the purposes of the BOP compilation are collected on the basis of Article 42 of the Law on the Bulgarian National Bank as well as on the basis of Article 7, paragraph 10 of the Currency Law. The data are processed by the Balance of Payments and External Debt Division within the BNB Statistics Directorate keeping its confidentiality. At present, the Bulgarian National Bank compiles and publishes standard presentation as well as analytic presentation of the balance of payments in accordance with the Sixth Edition of the Balance of Payments and International Investment Position Manual (IMF, 2008), the Balance of Payments Textbook (IMF, 1996), and the Recommendation of the European Central Bank.[33]

The balance of payments' methodology is conceptually related to that of the *System of National Accounts* (SNA). The items of the balance of payments correspond closely to the relevant categories of the *rest of the world* account in the SNA.

There is a close relationship between the *International Investment Position* and the balance of payments as well. The BOP financial account measures an economy's transactions in external financial assets and liabilities, which affect the stock of external financial assets and liabilities measured in the international investment position.

I. Accounting Principles and Conventions

The basic convention applied in the compilation of Bulgaria's balance of payments is the implementation of the *vertical double entry bookkeeping from the perspective of the residents of that economy*. According to it, each transaction leads to at least two corresponding entries, traditionally referred to as a *credit entry* and a *debit entry*, in the books of the transactor. In the current and capital accounts, a *credit* denotes entries from exports, primary income receivable, transfers receivable, and disposals of non-produced non-financial assets. A *debit* is used to record entries for imports, primary income payable, transfers payable, and acquisitions of non-produced non-financial assets. Financial account items are recorded on a net basis separately for each financial asset and liability, *i.e.* they reflect changes due to all credit and

[31] The Statistical Data Release Calendar is published on the BNB website: www.bnb.bg/*Press office/Events/Calendar.*
[32] Revised methodological notes as of 17 April 2015.
[33] Recommendation of the European Central Bank of 23 January 2014 amending Recommendation ECB/2011/24 on the statistical reporting requirements of the European Central Bank in the field of external statistics (ECB/2014/2).

debit entries during an accounting period. A positive change indicates an increase in assets or liabilities and a negative change indicates a decrease in assets or liabilities.

Each transaction should be recorded according to the accrual basis, which determines to which time period it should be attributed. *Accrual accounting records flows at the time economic value is created, transformed, exchanged, transferred, or extinguished*. This means that flows that imply a change of economic ownership are recorded when ownership passes and services are recorded when provided. In other words, the effects of economic events are recorded in the period in which they occur, irrespective of whether cash was received or paid or was due to be received or paid.

Transaction valuations are based on market prices. If the actual market prices are not available, the average market prices are used as approximation.

Valuation (exchange rate or price) changes of the Bulgaria's external assets and liabilities are not included in the balance of payments.

The units of account for the balance of payments of Bulgaria are euro and levs. The conversion into the unit of account is made using the exchange rate at the time of transaction. If not available, or inapplicable for other practical reasons, the average exchange rate for the reporting month is used.

II. Balance of Payments Components

The balance of payments components are compiled using the *International Transactions Reporting System* (ITRS), which includes (i) banks' reports, and (ii) reports by enterprises which have bank accounts abroad, pertaining to the residents' international transactions. These reports cover all components of the balance of payments table. As of 1 January 2010 the threshold under which transactions, reported by payment service providers are exempted from balance of payments reporting has risen from BGN 25,000 to BGN 100,000. In addition, the data on certain BOP components collected by the ITRS is substituted for data from other sources: (i) monthly exports and imports of goods, provided by the NSI (ii) BNB estimations for the items *Travel, Transportation, Compensation of employees, credit and Workers remittances, credit* (iii) direct investment enterprise survey and quarterly reports of Bulgarian FDI abroad (iv) monthly reports by banks, other non-bank financial institutions, insurance companies and pension funds on their *Portfolio investments, assets* (v) data from the Central Depository on the *Portfolio investments, liabilities* (vi) administrative records, (vii) reports by enterprises having financial loans borrowed from and lent to non-residents and (viii) enterprise reports on their assets and liabilities (different from financial loans) with non-residents.

In the analytical presentation the balance of payments components are classified in the following main categories:

A. Current Account

The current account shows flows of ***goods, services****, primary and secondary* ***income*** *between residents and non-residents.* The current account is an important grouping of accounts within the balance of payments. The balance on these accounts is known as the current account balance. The current account balance shows the difference between the sum of exports and income receivable and the sum of imports and income payable (exports and imports refer to both goods and services, while income to both primary and secondary income).

The flows on the debit side represent the gross domestic product created in the rest of the world and acquired by the domestic economy (imports of goods and services), as well as the acquisition of factors of production expressed by income paid or payable. Offsets to non-refundable real and financial resources provided are also recorded.

Goods *are physical, produced items over which ownership rights can be established and whose economic ownership can be passed from one institutional unit to another by engaging in transactions*. They may be used to satisfy the needs or wants of households or the community or used to produce other goods or services. The production of a good can be separated from its subsequent sale or resale. Goods cover: general merchandise, goods under merchanting and non-monetary gold.

General merchandise *on a balance of payments basis covers goods whose economic ownership is changed between a resident and a non-resident and that are not included in the following specific categories.* International merchandise trade statistics, compiled by the National Statistical Institute are the main data source for general merchandise.

The data on imports and exports *FOB (free on board)* are based on customs declarations, as the codes used are after the *Harmonised System for Description and Coding of Commodities* of the World Customs Organisation, introduced in 1988 and supplemented in 1992. With the January 2006 data the Bulgarian National Bank and the National Statistics Institute apply jointly methodology for compilation of imports

at FOB prices and receipts and payments regarding the freight transportation, developed by them. The methodology is based on the analysis of the CIF/FOB correlations for the imports of goods depending on the different imports delivery categories, as well as on the different mode of transportation and nationality of the carrier.

The geographical breakdown of the Goods item of the BOP is based on the following principles:

For the intra EU trade in goods:

- In case of exports (or dispatches), a partner country is the country (or Member State) of final destination of the goods
- In case of imports (or arrivals), a partner country is the country (or Member State) of consignment of the goods.

For the trade with third countries (outside the EU)

- In case of exports, a partner country is the *country of final destination* of the goods
- In case of imports, a partner country is the *country of origin* of the goods.

Sources: The source of data between the beginning of 2003 and the end of 2006 was the Customs Agency and for preceding years – the Information Services (at the Informational Computing Center Directorate). The Bulgarian National Bank and the National Statistical Institute received the exports and imports data, supplemented them with other information and processed them further. With the introduction of the system Intrastat (introduced with the Law on Statistics of Intercommunity Merchandise Trade, published in the Darjaven Vestnik, issue 51 of 2006) with the January 2007 data changes in the way of reporting of the external trade of Bulgaria with the rest of the EU Member States took place.

The introduction of the system Intrastat led to changes in the deadlines for data receiving and processing. The information on exports (dispatches) and imports (arrivals) of goods is reported by the Intrastat operators (the firms obliged to report) to the National Revenue Agency within 14 days after the close of the reporting month. These data are sent to the National Statistical Institute for further processing. The NSI reports to Eurostat aggregated monthly data (without breakdowns by trade partners and by type of goods) within 42 days after the close of the reporting month. The detailed intra trade data on dispatches and arrivals of goods are reported to Eurostat within 70 days after the close of the reporting month.

The BNB receives aggregated data from the NSI (without breakdowns by trade partners and by type of goods) on the country trade with the other EU Member States within 35 days after the close of the reporting month, and these data are supplemented by the data of the Customs Agency on trade with third countries. Before that with the publication of the report on the balance of payments for the reporting month only aggregated data on exports and imports are published. The BNB receives detailed data on dispatches and arrivals of goods from the NSI within 60 days after the close of the reporting month.

As a result of these changes the schedule for external trade data reporting by the BNB is the following:

- Preliminary aggregated data (without breakdowns by trade partners and by type of goods) for the reporting month are published within 42 days after the close of the reporting month in the balance of payments table.
- Preliminary detailed data (with breakdowns by trade partners and by type of goods) for the reporting month are distributed to users not earlier than 73 days after the close of the reporting month.
- External trade of Bulgaria from the Balance of Payments of Bulgaria is prepared quarterly not earlier than 73 days after the close of the reporting month.

The published series of data on Bulgarian imports and exports on the web site of the BNB are updated not earlier than 73 days after the close of the reporting month.

In accordance with the common methodology, the BNB and the NSI have to agree upon the data before publishing them.

Merchanting *is defined as the purchase of goods by a resident (of the compiling economy) from a non-resident combined with the subsequent resale of the same goods to another non-resident without the goods being present in the compiling economy*. Merchanting occurs for transactions involving goods where physical possession of the goods by the owner is unnecessary for the process to occur.

Goods under merchanting are recorded in the accounts of the owner in the same way as any other goods it owns. However, the goods are shown separately in international accounts statistics of the economy of the merchant because they are of interest in their own right and because they are not covered by the customs system of that economy.

The acquisition of goods by merchants is shown under *Goods acquired under merchanting* as a negative export of the economy of the merchant.

The sale of goods is shown under *Goods sold under merchanting* as a positive export of the economy of the merchant.

The difference between sales and purchases of goods for merchanting is shown in the item Net exports of goods under merchanting. This item includes merchants' margins, holding gains and losses, and changes in inventories of goods under merchanting. As a result of losses or increases in inventories, net exports of goods under merchanting may be negative in some cases.

Merchanting entries are valued at transaction prices as agreed by the parties, not FOB.

If there is no change of ownership of the goods, there is no merchanting transaction, but there may be manufacturing services on physical inputs owned by others for a fee.

Sources: Regular quarterly survey among enterprises trading internationally in goods and services.

Services *are the result of a production activity that changes the conditions of the consuming units, or facilitate the exchange of products or financial assets. Services are not generally separate items over which ownership rights can be established and cannot generally be separated from their production*. The *Services* component comprises *Manufacturing services on physical inputs owned by others, Maintenance and repair services not included elsewhere, Transport, Travel,*and *Other services*.

Manufacturing services on physical inputs owned by others *cover processing, assembly, labeling, packing, etc., undertaken by enterprises that do not own the goods concerned.* The manufacturing is undertaken by an entity that does not own the goods and that is paid a fee by the owner. In these cases, the ownership of the goods does not change, so no general merchandise transaction is recorded between the processor and the owner.

Sources: Regular quarterly survey among enterprises trading internationally in goods and services.

Maintenance and repair services not included elsewhere *cover maintenance and repair work by residents on goods that are owned by non-residents (and vice versa)*. The repairs may be performed at the site of the repairer or elsewhere. Repairs and maintenance on ships, aircraft, and other transport equipment are included in this item. The value recorded for maintenance and repairs is the value of the work done—not the gross value of the goods before and after repairs.

Sources: Regular quarterly survey among enterprises trading internationally in goods and services.

Transport *is the process of carriage of people and objects from one location to another as well as related supporting and auxiliary services.* Transport services cover freight transport, passenger transport, other transport and postal and courier services.

Sources: The Bulgarian National Bank derives the data on freight transportation from foreign trade data and the data on passenger transportation from travel data on the basis of estimates.

Since 2006 the *freight transportation* receipts have been set up on the basis of estimated receipts of resident carriers related to the country exports of goods. The payments are calculated as an estimation of the payments made by residents on behalf of non-resident carriers related to the country imports of goods. The receipts and payments are estimated according to mode of transportation and nationality of the carrier. With the introduction of the system Intrastat with the January 2007 data changes in the way of compilation of receipts and payments regarding the freight transportation of Bulgaria with the rest of the EU member states took place. Due to the delay in receiving the detailed data on trade of Bulgaria with the rest of the EU member states from the NSI, as of the date of publication of the preliminary balance of payments report for the corresponding month (42 days after the close of the reporting period) the preliminary compilation of receipts and payments of freight transportation is based on data for preceding years. These estimates are subject to revisions after receiving the preliminary detailed data (with breakdown by trade partners and by type of goods) on trade with the rest of the EU member states for the reporting month.

The source for *postal and courier services* is the regular quarterly survey among enterprises trading internationally in goods and services.

Travel credits *cover goods and services for own use or to give away acquired from an economy by nonresidents during visits to that economy.*

Travel debits *cover goods and services for own use or to give away acquired from other economies by residents during visits to these other economies. Travel* excludes goods for resale, which are included in *general merchandise*. The acquisition of valuables (such as jewelry), consumer durable goods (such as cars and electric goods), and other consumer purchases for own use or to give away that are included in customs data in excess of customs thresholds, are included in *general merchandise*.

By the end of 2006 the data on travel is based on data from the Ministry of Internal Affairs on the number of travellers crossing the borders and on estimates of *per capita* expenditures, the latter based on the methodology for estimation of the receipts and expenditures from travel services – Methodology For

Estimation of the Receipts and Expenditures from Travel in the Bulgarian Balance of Payments (Bulgarian National Bank, Ministry of Trade and Tourism, 18 November 1999).

As of the beginning of 2007 data for the number and the structure of foreigners who visited the country are based on information from the border police and NSI estimates. With the January 2010 data the BNB applies new methodology for estimation of the receipts and expenditures for travel and passenger transportation. The estimation model for the *Travel* item is based on the product of the number of travellers and the expenditure respective for a certain type of purpose of the travel (for more detailed information and questions, related to the methodologies applied, please contact us through the following e-mail: *press_office@bnbank.org*). The estimates of the expenditures (receipts) by purpose of the travel are based on the data collected during the *Border Survey among Traveling Bulgarians and Foreigners* conducted by the BNB during the period July 2007 – August 2008. The new methodology was applied for the first time with the data for January 2010, with back data revisions for the months of 2007, 2008 and 2009.

Other services item covers receipts and payments related to services other than Manufacturing services on physical inputs owned by others, Maintenance and repair services not included elsewhere, Transport, Travel (communication, construction, financial, leasing, insurance, cultural, sport and recreational services, *etc*.).

By end-2009 the main sources of information on this item were the banks' reports on their customers' imports and exports of non-factor services and the quarterly reports of enterprises having accounts abroad, as well as BNB estimates for the transactions below the threshold of BGN 100,000. In accordance with Regulation (EC) No 924/2009 of the European Parliament and the Council of 16 September 2009 on cross-border payments in the Community and repealing Regulation (EC) No 2560/2001 with effect from January 2010, the settlement-based national reporting obligations on payment service providers for balance of payments statistics related to payment transactions of their customers up to EUR 50,000 were removed. The quality and the scope of the data collected by the banks depend to a great extent on the threshold above which they report the transactions between residents and non-residents to the BNB. Raising the threshold without alternative source for these data would have considerably deteriorated the quality of the balance of payments data and particularly of the current account. The analysis showed that the loss of information for some services items could reach up to 90 per cent. For that reason the BNB has changed the methodology for collection and compilation of data on other services and other items in the current account that still relied on the settlement data. As of the beginning of 2010 the BNB started conducting regular quarterly survey among enterprises trading internationally in services. Based on the results of the survey, with the publication of January 2011 balance of payments figures, data on other services for 2010 are revised. For the purpose of the monthly publications data on *other services* item are based on the settlement data from banks for the transactions above the threshold of BGN 100,000 and BNB estimations for transactions below the threshold. After processing the quarterly reports by enterprises data are to be revised.

Primary income *represents the return that accrues to institutional units for their contribution to the production process or for the provision of financial assets and renting natural resources to other institutional units.* Two types of primary income are distinguished: (a) income associated with the production process. Compensation of employees is income for the contribution of labor inputs to the production process. Taxes and subsidies on products and production are also income related to production; and (b) investment income – income associated with the ownership of financial and other non-produced assets.

Compensation of employees covers wages, salaries and other benefits paid to non-resident workers in Bulgaria or received by resident workers abroad. The compensation of employees comprises also income due to illegal employment. By the end of 2006 the BNB estimates this flow in accordance with the *Methodology for Estimation of Flows due to Illegal Employment* (14 March 2006). With the January 2010 data the BNB applies new methodology for estimation of the *Compensation of employees*, *credit*. The new methodology was applied for the first time with the data for January 2010, with back data revisions for the months of 2007, 2008 and 2009.

• Investment income covers receipts and payments of income associated with external financial assets and liabilities, including receipts and payments on direct investment, portfolio investment, other investment, and receipts on reserve assets.

The main sources of information on the *Income* component are the banks' reports and the reports of non-bank financial institutions, insurance companies, pension funds, enterprises, the Ministry of Finance, and the Bulgarian National Bank.

The ***secondary income*** account shows current transfers between residents and non-residents. Various types of current transfers are recorded in this account to show their role in the process of income distribution between the economies. Transfers may be made in cash or in kind.

Capital transfers are shown in the capital account. Whereas primary income affects national income; secondary income, together with primary income, affect gross national disposable income. Capital transfers do not affect disposable income, and hence, are recorded in the capital account.

Current taxes on income, wealth, *etc*., social contributions, social benefits, net non-life insurance premiums, non-life insurance claims, current international cooperation, personal transfers and miscellaneous current transfers, *etc*. are included in the *Current transfers*. *Workers' remittances are current transfers made by employees to residents of another economy*. They are included as a supplementary item.

Sources: The Bulgarian National Bank receives information on current transfers from the Ministry of Finance, the Bulgarian Red Cross, the Agency for Foreign Aid, and from the reporting system of banks on transactions between residents and non-residents.

The item *Workers remittances, credit* is a sub-item of the *Current transfers*, *credit* in the current account of the balance of payments and is a balancing item for transfers without a *quid-pro-quo* in cash or in kind.

Applying of a new methodology for estimation of these flows became necessary not only because the above described circumstances demanded it but because of the necessity to capture inflows transferred through both official and unofficial channels.

The estimates of the workers' remittances are based on the product of the number of Bulgarian emigrants, transferring money to their relatives and the amount of the average transfer. Such calculations are made separately for the official and the unofficial transfer channels. The sum of the money transferred *via* those two channels is recorded as the amount of workers' remittances to Bulgaria.

The data on the number of the Bulgarian emigrants are based on information from the State Agency for Bulgarians Abroad, from the Bulgarian embassies and from Eurostat. The data on the percentage of the Bulgarian emigrants, transferring money, the shares of the official and unofficial channels and the average transfer for each of the channels used are based on the data collected *via* the Border Survey.

The new methodology was applied for the first time with the data for January 2010, with back data revisions for the months of 2007, 2008 and 2009.

B. Capital Account

The *Capital Account* shows (1) *capital transfers receivable and payable between residents and non-residents*; and (2) *the acquisition and disposal of non-produced non-financial assets between residents and non-residents*.

If in kind, a capital transfer consists of (i) a transfer of ownership of fixed assets, or (ii) forgiveness of a liability by a creditor when no counterpart is received in return. If in cash, a transfer is a *capital transfer* when it is linked to, or conditional on, the acquisition or disposal of fixed assets (for example, an investment grant).

Non-produced non-financial assets consist of natural resources; contracts, leases, and licenses; and marketing assets (and goodwill).

Sources: The Bulgarian National Bank receives information on the capital account from the Ministry of Finance (for capital transfers from the EU funds), from the quarterly reports of the enterprises in the non-financial sector, the monthly reports of the notaries and others.

C. Financial Account

The Financial Account records transactions that involve financial assets and liabilities and that take place between residents and non-residents. The financial account indicates the functional categories, sectors, instruments, and maturities used for net international financing transactions. The *Financial Account* includes *Direct investment*, *Portfolio investment, Financial derivatives (other than reserves) and employee stock options, Other investment* and *Reserve assets*.

• ***Direct investment*** *is a category of cross-border investment associated with a resident in one economy having control or a significant degree of influence on the management of an enterprise that is resident in another economy.* As well as the equity that gives rise to control or influence, direct investment also includes investment associated with that relationship, including investment in indirectly influenced or controlled enterprises, investment in fellow enterprises, debt and reverse investment.

Direct investment covers most financial transactions and positions between affiliates resident in different economies. Investment income associated with direct investment positions is also included in direct investment.

Intercompany lending is used to describe direct investment debt positions between affiliated enterprises. It includes debt instrument transactions and positions other than those between selected affiliated financial corporations (it is not classified as direct investment because it is not considered to be so strongly connected to the direct investment relationship). The financial corporations covered by this case are: deposit-taking corporations (both central banks and deposit-taking corporations other than the central bank); investment funds and other financial intermediaries except insurance companies and pension funds.

The Direct investment has two presentations: Asset/Liability presentation (used in the balance of payments statistics) and *Directional Principle presentation.* The directional principle is a presentation of direct investment data organised according to the direction of the direct investment relationship.

The difference between the asset-liability and directional presentations arises from differences in the treatment of reverse investment and some investment between fellow enterprises. Under the directional principle, direct investment is shown as either direct investment abroad or direct investment in the reporting economy:

(a) *Direct investment abroad covers assets and liabilities between resident direct investors and their direct investment enterprises. It also covers assets and liabilities between resident and non-resident fellow enterprises if the ultimate controlling parent is resident*. Direct investment abroad is also called outward direct investment.

(b) *Direct investment in the reporting economy includes all liabilities and assets between resident direct investment enterprises and their direct investors. It also covers assets and liabilities between resident and non-resident fellow enterprises if the ultimate controlling parent is non-resident.* Direct investment in the reporting economy is also called inward direct investment.

Under the directional principle, *direct investment abroad and direct investment in the reporting economy* include both assets and liabilities, and thus, negative values may arise.

Data on both the asset/liability and directional principle bases of compilation are useful for different kinds of analysis:

- Data on an asset/liability basis are consistent with monetary, financial, and other balance sheet data, so facilitating comparison between the datasets. These data are needed on an immediate counterparty basis to adequately monitor flows and positions (for instance in the cases of SPEs).
- Data on a directional principle basis assist in understanding the motivation for direct investment and take account of control and influence. In the directional presentation, reverse investment can be seen as equivalent to the withdrawal of investment. The directional principle may be particularly useful for an economy with large values of pass-through funds or round tripping, because the large investment flows into and out of a economy may not be of primary interest to analysts of direct investment.

The balance of payments presentation uses direct investment assets and direct investment liabilities (so that reverse investment is not netted in totals).

The BNB publishes FDI data according to both presentations.

Sources: The Bulgarian National Bank receives monthly data on direct investments in Bulgaria from the Privatisation Agency, from the Central Depository, from the reporting system of banks on transactions between residents and non-residents, from notaries and registry offices; quarterly data from the Financial Supervision Commission, from the direct investment enterprises, from the National Statistical Institute, from the Banking Supervision Department of the BNB, from the insurance companies and pension insurance companies; annual data from the NSI on foreign direct investment stock in enterprises from the non-financial sector.

For data on direct investments abroad the Bulgarian National Bank uses the information from FDI declaration forms, from quarterly reports of non-financial sector enterprises and from the reporting system of banks on balance of paymens statistics.

• ***Portfolio investment*** includes *portfolio investment, assets and portfolio investment, liabilities*.

Portfolio investment is defined a cross-border transactions and positions involving debt or equity securities or investment fund' shares, other than those included in *direct investment* or *reserve assets*.

Securities are debt and equity instruments that have the characteristic feature of negotiability.

Sources: The main sources of information on the liabilities side of the Portfolio investment is the data provided by the Ministry of Finance, the Bulgarian National Bank, banks and the Central Depository. Data on the assets side of the Portfolio investment are provided by banks (which give information about

their and their clients' portfolio investments), custodians, non-bank financial institutions, insurance companies and pension funds, the Bulgarian National Bank and the Ministry of Finance.

• ***Other investment*** covers other equity, currency and deposits, loans, trade credits and advances, and other accounts receivable/payable.

The *Currency and Deposits* component presents on the assets side the changes in the residents' currency deposits held abroad, and on the liabilities side – the changes in the liabilities of the resident banks to non-residents in domestic and foreign currency. Following the basic accounting principle and conventions set in the Balance of Payments Manual (IMF, 1993), when compiling that item the Bulgarian National Bank excludes any changes therein due to exchange rate changes.

Loans item includes received and paid principals on short- and long-term loans between residents and non-residents if no issue of a tradable security is involved with these loans.

Data on the Loans item is received by the Ministry of Finance, the Bulgarian National Bank, the banks and directly by the enterprises that have lent to or borrowed from abroad. The companies report on a quarterly or an annual basis to the BNB. The monthly data on *Loans, Other sectors* (assets and liabilities) is revised upon receipt of the respondents' reports.

According to the balance of payments conventions trade credit arises from the direct extension of credit from a supplier to a buyer, *i.e.* this is a credit extended by a trade partner without issue of a tradable security.

The main source of information on trade credits (assets and liabilities) are the quarterly reports of enterprises on their assets/liabilities to non-residents.

Items *Other accounts receivable/payable* include all transactions on miscellaneous accounts receivable and payable not included elsewhere and transactions in arrears.

D. Net Errors and Omissions

The *Net Errors and Omissions* component is an offsetting item. This component exists in the BOP presentation because the compilation system used by the Bulgarian National Bank is not a closed one but is a combination of different sources of information. Unlike other statistical reports, such as for example the monetary statistics, the collecting of the data necessary for the balance of payments compilation could not be restricted to the accounting records of the banks as the only source of information. Net errors and omissions are equal to the difference between the Net financial account and the net Current and capital account balances.

The fluctuations in the *Net Errors and Omissions*, both in sign and in size, are mainly due to: (i) revisions of export and import data, (ii) the development of the methodology for compilation of certain balance of payments' components and (iii) the existence of objective obstacles to the collection of data on certain balance of payments' items.

E. Reserves and Related Items

• *Reserve Assets* include those external assets that are readily available to and controlled by the central bank (government) for direct financing of balance of payments imbalances. The reserve assets comprise monetary gold, SDRs, reserve position in the Fund, foreign exchange assets (consisting of currency and deposits and securities), and other claims. The entries under this category pertain to transactions in the BNB's external holdings which are administered by the Issue Department. The data on reserve assets changes included in the BOP table exclude valuation changes (due to exchange rate and market price changes).

In the analytic presentation of the balance of payments this group includes also *Use of Fund credit* and the item *Exceptional Financing*.

III. Periodicity, Frequency and Timeliness of the Balance of Payments Publications

The Bulgarian National Bank compiles and publishes the balance of payments of Bulgaria on a monthly basis. The schedule of the Bulgarian National Bank is to publish the data within six weeks (42 calendar days) after the close of the reference period.

IV. Data Revision Policy

Revisions to the preliminary balance of payments data are mandatory international practice. They are particularly important in compiling the balance of payments and international investment position because of the short deadline after the end of the reporting period, in which the data is compiled and published. Various sources (banks, non-bank financial enterprises, direct investment enterprises, the Central Depository, the National Statistical Institute, *etc*.) are used for the data compilation. The incoming data from these sources are with different frequency, timeliness (deadline for submitting the information after

the reporting period) and coverage. The different frequency and timeliness of the incoming information necessitate these revisions.

The periodic data revisions that the BNB implements are in compliance with the ECB Timetable for Exchange of Balance of Payments, International Investment Position and Reserve Assets Statistics within the ESCB (which includes a data revision timetable), as well as with the Eurostat Timetable for Exchange of data and policy of revisions in the European Union. Observing this policy of revisions ensures the comparability of statistics between Member States of the European Union and the European System of Central Banks. These revisions provide users with timely information on the updated data by separate items.[34] Following the requirements of the ECB and Eurostat Timetables, the policy on revisions pursued by the Bulgarian National Bank is based on the following principles:

(i) With the report for the first month of each quarter the monthly data for the whole current year are revised. With the reports for the second and the third month of each quarter, only the data for the previous month are revised. With the January data, published in March, and the July data, published in September of the current reporting year, the timetables give opportunity for revising the data for the previous up to four years, if necessary. In December with the publication of the data for October, a data revision for the current and previous year is possible, if necessary.

(ii) When on-going changes are made due to additional information collected, as well as resulting from elimination of errors, the Bulgarian National Bank timely informs the users through the monthly press releases as well as through the notes at the end of the balance of payments table.

(iii) When significant revisions are made due to changes in the methodology for reporting of certain BOP components or other reasons, the Bulgarian National Bank publishes in advance information on the changes to facilitate the users of the data.

V. Data Dissemination

The Bulgarian National Bank disseminates monthly balance of payments data on its web site: *http://www.bnb.bg*.

The data are published also in the Bulgarian National Bank *Monthly Bulletin*.

Data on the balance of payments are included in the semi-annual and annual official reports of the Bulgarian National Bank.

Data are simultaneously released to all interested parties.

VI. Contacts

If you have any questions on the methodology applied by the Bulgarian National Bank or on the balance of payments data published, please do not hesitate to send them to Mr. Emil Dimitrov, director of the Statistics Directorate, *via* e-mail at *Dimitrov.E@bnbank.org*, and Mrs. Liliana Bancheva, head of the Balance of Payments and External Debt Division, *via* e-mail at *Bancheva.L@bnbank.org*, or by mail to the following address:

1000 Sofia, Bulgaria

Imports and Exports[35]

I. Data Sources

The data source between the beginning of 2003 and the end of 2006 was the Customs Agency, and for preceding years – the Information Services (at the Informational Computing Center Directorate). The Bulgarian National Bank and the National Statistical Institute received the exports and imports data, supplemented them with other information and processed them further. Until the end of 2006 all enterprises which exported or imported goods were obliged to declare these activities through customs declarations.

Since 1 January 2007 the enterprises trading with other EU Member States report according to the Intrastat system (introduced with the Law on Statistics of Intercommunity Merchandise Trade, published in the Darjaven Vestnik, issue 51 of 2006). In compliance with this Law, enterprises whose turnover exceeds the threshold set by the National Statistical Institute (NSI), submit Intrastat declarations to the National Revenue Agency (NRA). The Agency is obliged to perform control over the coverage of the enterprises and to keep track of the fulfilment of their duties under the Intrastat system, as well as to control the au-

[34] The annual data on foreign direct investment in the country are revised 15 months after the close of the reporting period (upon receipt of the annual NSI data on the non-financial sector at the BNB).
[35] Revised methodological notes as of 21 April 2015.

thenticity of the provided data. The data from the Intrastat declarations are submitted to the NSI for further processing.

The imports from, and exports to, third countries (non-EU Member States), as well as the movement of goods within the EU, which is under customs control, are still reported through customs declarations, and the Customs Agency submits the data to the NSI for processing. The NSI combines these data with the Intrastat data, processes them and after performing additional estimates provides the data to the users, including the Bulgarian National Bank.

II. Data Timelines

The BNB receives from the NSI aggregated data (without breakdowns by trade partner and type of goods) on the country trade with the other EU Member States within 35 days after the close of the reporting month. The detailed data on dispatches and arrivals of goods are provided by the NSI within 60 days after the close of the reporting month, and the data on the turnover of trade with third countries are provided by the NSI at the latest on the 29th day of the month following the reporting one.

III. Principles of Reporting

Exports are reported at FOB prices, and imports at CIF prices.

The coding system for commodities is based on the Combined Nomenclature. It is maintained by Eurostat, and used by the EU Member States for the purposes of foreign trade statistics.

With the implementation of the Sixth Edition of the *Balance of Payments and International Investment Position Manual* (IMF, 2008)[36] significant methodological changes in the reporting of trade in goods and trade in services were introduced. Based on their economic nature, certain items were reclassified from *Goods* (exports and imports) to *Services* (exports and imports), and *vice versa*.

The main methodological changes concerning exports and imports of goods are related to goods for processing, repair of capital goods, and goods for own use or to give away acquired by travelers that are in excess of customs thresholds. According to the Fifth Edition of the *Balance of Payments Manual* (IMF, 1993) and the external trade statistics the first two sub-items were reported under *Goods* (exports and imports) but goods for own use or to give away acquired by travelers that are in excess of customs thresholds were reported under *Services*. In accordance with the new methodological changes sub-items goods for processing and repair of capital goods are included in *Services* and goods for own use or to give away acquired by travelers that are in excess of customs thresholds are included in *Goods*.

Thus, the exports, imports and trade balance data compiled by the NSI do not equate to the exports, imports and trade balance data compiled by the BNB for the purposes of balance of payments statistics.

Taking into consideration the analytical importance of the data on goods (exports and imports) in the external trade statistics, the BNB shall continue its practice of preparing a short text on the external trade dynamics, and maintaining the relevant data series. These materials are included in the *Balance of Payments* publication, and are published on the BNB website.

More detailed information on these methodological changes is available in the material *Compilation of the balance of payments* in accordance with the methodology of the sixth edition of the *Balance of Payments and International Investment Position Manual*[37].

In accordance with the common methodology of the BNB and the NSI, since 1999 exports and imports are recorded after the *Special Trade System*, where the date of transactions' registration is that of the customs declarations clearance, or the month in which dispatches or arrivals within the Intrastat system are made. The criteria for description of partner countries are as follows: *imports* – by country of origin of the commodities; *exports* – by country of consignment, that is, the last known country where the commodities are to be delivered. For the purposes of consistency with the statistical time series on imports and exports by ***major trade partners and regions***, the BNB has continued to apply these criteria when publishing foreign trade data after 1 January 2007.

Before publishing the external trade data, the BNB and the NSI coordinate the gross figures for imports, exports and trade balance.

IV. Import and Export Tables

A. End-use tables

For the purposes of economic analysis the BNB publishes tables by *end-use*. They are monthly, quarterly and annual. Tables are based on the four-digit numerical codes after the *Combined Nomenclature for the EU countries* grouped according to purpose and end of use of the respective commodity. The basic

[36] *http://www.imf.org/external/pubs/ft/bop/2007/bop6comp.htm*.
[37] These papers are available on the BNB website at *www.bnb.bg*, section Statistics/Methodological notes (left-hand menu).

principles in the distribution of the commodities in the respective groups are: purpose of use, on the one hand, and degree of processing, on the other.

B. Major trading partner and region tables

The tables by *Major trade partners and regions* include the most important countries and regions for the Bulgarian exports (imports). They are monthly, quarterly and annual. In relation to Croatia's accession to the EU on 1 July 2013 and for the purpose of data comparability for the period January 1995 – June 2013, Croatia's time series have been included in the EU data.

C. Main trade region and end-use tables

The tables on *Main trade regions by end-use* represent cross-section of the country's imports and exports data by regions and by commodities. They are quarterly and annual.

In all published tables exports are reported at FOB prices, and imports at CIF prices.

V. Data Dissemination

The external trade data are available on the website of the BNB: *http://www.bnb.bg*. Also, the data are published in the Bulgarian National Bank *Monthly Bulletin*. The foreign trade data are included in the semi-annual and annual reports of the Bulgarian National Bank.

External trade analysis and time series (since 1995) for the exports and imports by *end-use* and by *major trading partners and regions* are published on the website of the BNB. Those series could be searched by period (month, quarter, and year) and by group of goods (trade partners).

Along with this, quarterly and annual tables on major trade region by end-use are available there.

VI. Timelines of Publications

The data series on the country's exports and imports published on the website of the BNB are updated not earlier than 73 days after the close of the reporting month.

VII. Data Revision Policy

In accordance with data revision policy, with the report for the first month of the quarter the monthly data for the whole current year are revised. If necessary, the Bulgarian National Bank may revise the imports and exports data more frequently.

VIII. Contacts

If you have any questions on the methodology applied by the Bulgarian National Bank or on the foreign trade data published, please do not hesitate to contact to Press Office (*press_office@bnbank.org*) or Ms. Liliana Bancheva, head of the Balance of Payments and External Debt Division, *via* e-mail at *Bancheva.L@bnbank.org* (tel. +359 2 9145 1439).

Gross External Debt[38]

In reporting Bulgaria's gross external debt, the Bulgarian National Bank follows the international standards and requirements set out in the *External Debt Statistics: Guide for Compilers and Users, 2003* prepared by several international organisations and issued by the IMF[39] and in the *Balance of Payments Manual,* IMF, 5th edition, 1993. On the one hand, this ensures international data compatibility, and consistency between the external debt statistics and the balance of payments, international investment position and national accounts, on the other hand. Data on gross external debt are an important information source for particular balance of payments items and the international investment position.

The BNB compiles and disseminates monthly statistical data on the gross external debt by institutional sector.

Publications comprise monthly data on: (1) gross external debt stock (2) gross external debt service and (3) disbursements. Additional analytical external debt data by creditor is disseminated quarterly.

I. Accounting Principles and Conventions

When compiling debt statistics, the BNB follows the **international definition of gross external debt** – 'Gross external debt, at any given time, is the outstanding amount of those actual current, and not contingent, liabilities that require payment(s) of principal and/or interest by the debtor at some point(s) in the future and that are owed to non-residents by residents of an economy.[40]

The main criterion for a liability to be included in the gross external debt of the country is that **it is issued by a resident and is owed to a non-resident**,[41] regardless of whether it is issued on domestic or in-

[38] Revised methodological notes as of 23 July 2013.

[39] *External Debt Statistics: Guide for Compilers and Users*, IMF, 2003 (Bank for International Settlements, The Commonwealth Secretariat, Eurostat, International Monetary Fund, Organisation for Economic Cooperation and Development, The Paris Club Secretariat, The United Nations Conference on Trade and Development, the World Bank).

[40] *External Debt Statistics: Guide for Compilers and Users*, p. 7, paragraph 2.3.

[41] For a definition of a resident and non-resident, see the *Balance of Payments Manual*, IMF, 5th edition, 1993, paragraphs 57–58.

ternational, money or capital markets. The same principle is applied to transactions: only those between residents and non-residents are recorded. In the debt tables the BNB records the amount of **tranches actually disbursed, not contingent**.

The stock of liabilities is recorded **at nominal, not at market value** even in the case when they are in the form of tradable securities. The gross external debt of Bulgaria is reported in euro.

The distinction between short-term and long-term debt is based on the **original**, not **residual maturity** of the liability. The long-term debt includes all liabilities with original maturity of over one year, liabilities without predefined maturity date as well as liabilities related to direct investment,[42] and the short-term debt, liabilities with original maturity of one year or less. All principal and interest arrears are recorded as short-term debt.

II. Gross External Debt Components

A. By Institutional Sector

The structure of the *Gross External Debt* table by institutional sector is in compliance with the requirements of the *External Debt Statistics: Guide for Compilers and Users, 2003*, prepared by several international organisations and published by the IMF.

The main components of the gross external debt tables classified by institutional sector are general government, monetary authorities, banks and other sectors. In accordance with the international statistical standards, debt liabilities related to direct investment (intercompany lending) are presented separately. The classification by institutional sector is in compliance with the Fifth edition of the *Balance of Payments Manual* (1993). Within the sectors, the external debt liabilities are classified by maturity: short-term and long-term and by instrument.

General Government

General government debt includes: (1) central government debt, (2) local government debt, (3) debt of social security funds and (4) debt of all non-market non-profit institutions that are controlled and mainly financed by government units. Public corporations and unincorporated enterprises that function as if they were corporations (so called quasi-corporations) are explicitly excluded from the *General Government* sector and are allocated to *Banks* or *Other sectors* as appropriate. The debt liabilities of the *General government* sector are long-term and are classified by instrument: *Bonds and notes* and *Loans*. Liabilities for which no issue of tradable securities is involved are reported under *Loans*. Loans received by the central government from the IMF are also reported under *Loans*. The central government liabilities on securities issued on the domestic and on the international markets are reported under *Bonds and notes*, as the principle that only debt owed to non-residents is external debt is followed. The item comprises the entire stock of the issue abroad. The part of the issue abroad, held by residents at the end of the review period is reported with a negative sign in the *Bonds and notes* held by residents item. Government securities and countervailing instruments issued by the government on the domestic market and held by non-residents are also reported under the *Bonds and notes* item.

Data sources: The main source of data is the *Register of Government and Government Guaranteed Debt* of the Ministry of Finance (prior to 31 December 2002 the source of that data was the *System for Debt Registration, Service and the Management* of the Ministry of Finance and the Bulgarian National Bank). Other sources are Government and Government Guaranteed Debts Depository Directorate with the BNB, the Central Depository AD and the banks. The source of data on securities issued abroad and held by residents are the custodians and the banks.

Monetary Authorities

In accordance with the international methodology on external debt statistics included herein are the external liabilities of the BNB. The data is derived from the *Register of Government and Government Guaranteed Debt* of the Ministry of Finance.

Banks

Short-term liabilities of the banks include short-term loans, non-residents' deposits with domestic banks as well as other payables to non-residents. Deposits in foreign currencies and in levs of non-residents with domestic banks are included in the *Deposits* subitem. The net increase in deposits in the banking system is reported in the *Gross External Debt Disbursements* table, and the net deposit withdrawal – in the external debt service tables, as a principal payment under the *Deposits* subitem. In accordance with the *External Debt Statistics: Guide for Compilers and Users*, deposits related to contingent liabilities are

[42] *External Debt Statistics: Guide for Compilers and Users*, IMF, 2003, paragraphs 3.14 and 7.5.

excluded.[43] Long-term liabilities include loans and bonds and notes issued by the banks and held by non-residents.

Data sources: Data on the amount and transactions on external loans are received monthly directly from the banks through a statistical form on their external liabilities. The Money and Banking Statistics Division with the Statistics Directorate of the BNB provides monthly data for the *Deposits* and *Other liabilities* items. The source for the data on the *Bonds and notes* item is the Central Depository.

Other Sectors

In the *Other sectors* item, the debt of private and state-owned non-bank enterprises (including *Government guaranteed debt*) as well as external liabilities of the households are reported.

Short-term liabilities of *Other sectors* include short-term loans, trade credits as well as other payables to non-residents. Long-term liabilities include loans and bonds and notes issued by the companies and held by non-residents.

Data sources: Data on financial loans are collected through the statistical *Form SPB-4 Report on the Financial Credit Liabilities of Residents to Non-residents* that covers data on the stock and the various types of transactions on the credit. As the Foreign Exchange Law envisages quarterly reporting of these liabilities, for the first two months of each quarter the BNB publishes estimations on the non-bank enterprises based on the debt service schedules provided by companies on the loans extended to them and on estimations. Under the *Trade credits* subitem, the respective liabilities of residents to non-residents[44] are reported excluding trade credit liabilities towards foreign direct investors. Such data are collected from the BNB through *Form SPB-6B Report on the Liabilities of Residents to Non-residents*. As the Foreign Exchange Law envisages quarterly reporting of these liabilities, for the first two months of each quarter the BNB publishes estimations of the stock of trade credits. Data on liabilities of the resident physical persons are collected through the annual statistical *Form SPB-8 Report on the Assets and Liabilities of Resident Physical Persons to Non-residents*.

Direct Investment: Intercompany Lending

In accordance with the international methodology on external debt statistics, a distinction is made between liabilities owed to direct investors (*Intercompany loans*) and such owed to other creditors. Liabilities related to direct investment relationship are separately identified (equity liabilities arising from direct investment, *i.e.* equity capital and reinvested earnings except non-participating preferred shares are excluded from external debt). Liabilities related to direct investment are treated as a long-term debt.

B. By creditor

In accordance with the structure recommended by the *External Debt Statistics: Guide for Compilers and Users*, quarterly external debt stock tables by creditor sector are prepared.

C. Public Sector and Private Sector External Debt

In accordance with paragraphs 5.5–5.6 of the *External Debt Statistics: Guide for Compilers and Users, IMF 2003*, the public sector external debt comprises the debt of the general government sector, the monetary authorities sector, the public banks, the public non-financial enterprises, as well as the government guaranteed debt of the private sector. The private sector external debt comprises banks and non-financial enterprises' debt, which is not included in the public and publicly guaranteed external debt. The data are monthly.

III. Periodicity, Frequency and Timeliness of the Gross External Debt Publications

The Bulgarian National Bank compiles and publishes data on the stock of the gross external debt of Bulgaria, the debt service payments and the disbursements on a monthly basis. The external sector debt indicators, including external debt indicators, are also disseminated monthly.

The Bulgarian National Bank publishes the data according to its advance release calendar. In case of a change, the BNB informs the users on the new release date at least a week before the advance date.

IV. Data Revision Policy

The data revisions policy of the Bulgarian National Bank is based on the following principles:

(i) Each monthly publication includes revisions of the data for the previous three months, and each quarterly publication includes revisions of the monthly data for the whole current year.

[43] External Debt Statistics: Guide for Compilers and Users, IMF 2003, paragraph 2.10.

[44] For a definition of trade credits, see Balance of Payments Manual, IMF, 5th edition, 1993, Chapter XX, paragraph 414, as well as External Debt Statistics: Guide for Compilers and Users, Chapter Three, paragraph 133.

(ii) When on-going changes are made due to additional information collected, as well as resulting from elimination of errors, the Bulgarian National Bank timely informs the users through the monthly press releases, as well as through the notes at the end of the Gross External Debt tables.

(iii) When significant revisions are made due to changes in the methodology for reporting of certain external debt components or for other reasons, the Bulgarian National Bank publishes in advance information on the changes in order to facilitate the users of the data.

V. Data Dissemination

The Bulgarian National Bank publishes monthly gross external debt data on the website of the Bulgarian National Bank: *www.bnb.bg*. The data are also published in the BNB Monthly Bulletin, in the semi-annual and annual reports of the Bulgarian National Bank. Data are simultaneously provided to all interested parties.

VI. Contacts

If you have any questions on the methodology applied by the Bulgarian National Bank or on the gross external debt data published, please do not hesitate to contact Mr. Emil Dimitrov, Director of the Statistics Directorate, *via* e-mail at *Dimitrov.E@bnbank.org* and Mrs. Liliana Bancheva, Head of the Balance of Payments and External Debt Division, at *Bancheva.L@bnbank.org*, or by mail to the following address:

Bulgarian National Bank
Balance of Payments and External Debt Division
1, Knyaz Alexander I Square
1000 Sofia, Bulgaria

International Investment Position of Bulgaria[45]

The Bulgarian National Bank is in charge of the compilation of international investment position (IIP) as part of the financial accounts of the country. The legal basis for the IIP compilation in Bulgaria is provided for in Article 42 of the Law on the Bulgarian National Bank. Data for the purposes of the IIP compilation are collected on the basis of Article 42 of the Law on the Bulgarian National Bank as well as on the basis of Articles 7–10 of the Currency Law and Ordinance No 27 of the BNB of 13 March 2014 (published in the Darjaven Vestnik, issue 27 of 25 March 2014). These data are processed by the Balance of Payments and External Debt Division within the Statistics Directorate of the BNB, ensuring its confidentiality. At present, the Bulgarian National Bank compiles and publishes the international investment position in accordance with the Sixth Edition of the Balance of Payments and International Investment Position Manual (IMF, 2008) and the Recommendation of the European Central Bank of 23 January 2014 amending Recommendation ECB/2011/24 on the statistical reporting requirements of the European Central Bank in the field of external statistics (ECB/2014/2).[46]

The IIP' methodology is conceptually related to that of the *System of National Accounts* (SNA) and the *Gross External Debt*. The items of the international investment position correspond closely to the relevant categories of the *rest of the world account* in the SNA.

There is a close relationship between the *International Investment Position* and the balance of payments as well. The BOP financial account measures an economy's transactions in external financial assets and liabilities, which affect the stock of external financial assets and liabilities measured in the international investment position.

I. Accounting Principles and Conventions

The *time of recording* of the stocks in the international investment position is as of the end of the reporting period.

Stocks valuations are based on market prices. If the actual market prices are not available, the average market prices are used as approximation.

Valuation (exchange rate or price) changes of the country's external assets and liabilities are included in the international investment position.

The units of account for the international investment position of Bulgaria are the EUR and the BGN. The conversion into the unit of account is made using the exchange rate at the end of the reporting period.

[45] Revised methodological notes as of 30 June 2015.
[46] Recommendation of the European Central Bank of 23 January 2014 amending Recommendation ECB/2011/24 on the statistical reporting requirements of the European Central Bank in the field of external statistics (ECB/2014/2).

II. International Investment Position Components

The IIP is the balance sheet of the country's stocks of external financial assets and liabilities at the end of a specific period. The primary level of classification in the IIP statement is the distinction between assets and liabilities. The second level of classification by function is fully consistent with the b.o.p. financial account. The functional categories of assets and liabilities are (i) direct investment, (ii) portfolio investment, (iii) financial derivatives (other than reserves) and employee stock options and (iv) other investment. Included in assets are also the reserve assets held by the monetary authorities. The liabilities in the IIP are a broader concept than the liabilities that constitute the country's gross external debt, as they include equity related liabilities. The third level of classification is by investment instrument.

Components in the international investment position are classified in the following main categories:

A. Direct Investment

Direct investment is a category of cross-border investment associated with a resident in one economy having control or a significant degree of influence on the management of an enterprise that is resident in another economy. In addition to the equity that gives rise to control or influence, direct investment also includes investment associated with that relationship, including investment in indirectly influenced or controlled enterprises, investment in fellow enterprises, debt and reverse investment.

Direct investment covers most financial transactions and positions between affiliates resident in different economies. Investment income associated with direct investment positions is also included in direct investment.

Intercompany lending is used to describe direct investment debt positions between affiliated enterprises. It includes debt instrument positions (in debt securities, loans, trade credits and advances and other accounts payable) other than those between selected affiliated financial corporations (it is not classified as direct investment because it is not considered to be so strongly connected to the direct investment relationship). The financial corporations covered by this case are: deposit-taking corporations (both central banks and deposit-taking corporations other than the central bank); investment funds and other financial intermediaries except insurance companies and pension funds.

The Direct investment has two presentations: Asset/Liability presentation (used in the international investment position statistics) and Directional Principle presentation. The directional principle is a presentation of direct investment data organized according to the direction of the direct investment relationship. It can be contrasted with the *asset/liability presentation* of aggregates used in the presentation of the international investment position, which are organized according to whether the investment relates to an asset or a liability.

The difference between the asset-liability and directional presentations arises from differences in the treatment of reverse investment and some investment between fellow enterprises. Under the directional principle, direct investment is shown as either direct investment abroad or direct investment in the reporting economy:

(a) *Direct investment abroad covers assets and liabilities between resident direct investors and their direct investment enterprises. It also covers assets and liabilities between resident and nonresident fellow enterprises if the ultimate controlling parent is resident*. Direct investment abroad is also called outward direct investment.

(b) *Direct investment in the reporting economy includes all liabilities and assets between resident direct investment enterprises and their direct investors. It also covers assets and liabilities between resident and nonresident fellow enterprises if the ultimate controlling parent is nonresident*. Direct investment in the reporting economy is also called inward direct investment.

Under the directional principle, direct investment abroad and direct investment in the reporting economy include both assets and liabilities, and thus, negative values may arise.

Data on both the asset/liability and directional principle bases of compilation are useful for different kinds of analysis:

- Data on an asset/liability basis are consistent with monetary, financial, and other balance sheet data, so facilitating comparison between the data sets. These data are needed on an immediate counterparty basis to adequately monitor flows and positions. For instance, if a jurisdiction of convenience that is the home to large SPEs (special purpose entities) were to experience a currency or other financial crises, data users would find data sets that look through SPEs (or that net data for SPEs without separate identification of gross levels) to be of limited help. SPEs and other entities may transform debt to equity, long-term to short-term, local currency to foreign currency, fixed to variable rates, *etc*., and these transformations alter risk characteristics in important ways.

- Data on a directional principle basis assist in understanding the motivation for direct investment and take account of control and influence. In the directional presentation, reverse investment can be seen as equivalent to the withdrawal of investment. The directional principle may be particularly useful for an economy with large values of pass-through funds or round tripping, because the large investment flows into and out of a economy may not be of primary interest to analysts of direct investment.

The international investment position uses direct investment assets and direct investment liabilities (so that reverse investment is not netted in totals).

The BNB publishes FDI data according to both presentations.

Sources: The Bulgarian National Bank receives monthly data on direct investments in the country from the Privatisation Agency, the Central Depository, the reporting system of banks on transactions between residents and non-residents, notaries and registry offices; quarterly data from the Financial Supervision Commission, the direct investment enterprises, the Banking Supervision Department of the BNB, the insurance companies and pension insurance companies; annual data from the NSI on foreign direct investment stock in enterprises from the non-financial sector.

For data on direct investments abroad the Bulgarian National Bank uses the information from FDI declaration forms, quarterly reports of non-financial sector enterprises and the reporting system of banks on transactions between residents and non-residents.

B. Portfolio Investment

Portfolio investment is defined as cross-border positions involving debt or equity securities or investment fund' shares, other than those included in direct investment or reserve assets. Debt securities are subdivided into long-term (with an original maturity of one year or more) and short-term (with an original maturity of less than one year). The stocks of portfolio investment assets cover securities issued by non-residents and held by residents. The stocks of portfolio investment liabilities cover securities issued by residents and held by non-residents.

Securities are debt and equity instruments that have the characteristic feature of negotiability.

Sources: The main sources of information on the liabilities side of the Portfolio investment are the data provided by the Ministry of Finance, the Bulgarian National Bank, banks and the Central Depository. Data on the assets side of the *Portfolio investment* is provided by banks and non-bank custodians (which give information about their and their clients' portfolio investments), non-bank financial institutions, insurance companies and pension funds, the Bulgarian National Bank and the Ministry of Finance.

C. Financial Derivatives

The assets and liabilities in financial derivatives (other than reserves) and employee stock options include positions in forward and future contracts, swaps, options, *etc.*

Sources: The main source of information are the monetary financial institutions.

D. Other Investment

Other investment covers other equity, currency and deposits, loans, trade credits and advances, and other accounts receivable/payable. The liability position includes also the SDR liabilities to the IMF.

The *Currency and Deposits* component presents on the assets side the positions in the residents' currency deposits held abroad, and on the liabilities side – the positions in the liabilities of the resident banks to non-residents in domestic and foreign currency.

Sources: The main sources on the asset side are the BIS-Basel and the balance sheet data of deposit taking corporations and other financial institutions. On the liabilities side data are provided by the deposit taking corporations and the BNB.

Loans item includes outstanding positions (including accrued interest) on short- and long-term loans between residents and non-residents (if no issue of a tradable security is involved with these loans).

Sources: Data on the item *Loans* (assets and liabilities) is received by the Ministry of Finance, the Bulgarian National Bank, the banks and directly by the enterprises that have lent to or borrowed from abroad. The companies report on a quarterly or an annual basis to the BNB. The monthly data on Loans, *Other sectors* (assets and liabilities) is revised upon receipt of the respondents' reports.

According to the IIP conventions trade credit arises from the direct extension of credit from a supplier to a buyer, *i.e.* this is a credit extended by a trade partner without issue of a tradable security.

Items *Other accounts receivable/payable* include all transactions on miscellaneous accounts receivable and payable not included elsewhere and transactions in arrears.

Sources: The main source of information on *trade credits and advances* and *other accounts receivable/payable (assets and liabilities)* are the quarterly reports of enterprises on their assets/liabilities to non-residents.

Other investment – liabilities item includes the special drawing rights positions, which the IMF members have the right to use in case of financial difficulties, exchanging them in convertible currencies.

Source: BNB.

E. Reserve Assets

Reserve assets include those external assets that are readily available to and controlled by the central bank (government) for direct financing of balance of payments imbalances. The reserve assets comprise monetary gold, SDRs, reserve position in the Fund, foreign exchange assets (consisting of currency and deposits and securities), and other claims. The entries under this category pertain to transactions in the BNB's external holdings which are administered by the Issue Department.

III. Periodicity, Frequency and Timeliness of the International Investment Position Publications

The Bulgarian National Bank compiles and publishes the international investment position of the country on a quarterly basis. The schedule of the Bulgarian National Bank is to publish the data within three months after the close of the reference period.

IV. Data Revision Policy

Revisions to the preliminary international investment position data are mandatory international practice. They are particularly important in compiling the balance of payments and international investment position because of the short deadlines after the end of the reporting period, in which the data is compiled and published. Various sources (banks, non-bank financial enterprises, direct investment enterprises, the Central Depository, the National Statistical Institute, *etc*.) are used for the data compilation. The incoming data from these sources are with different frequency, timeliness (deadline for submitting the information after the reporting period) and coverage. The different frequency and timeliness of the incoming information necessitate these revisions.

The periodic data revisions that the BNB implements are in compliance with the ECB Timetable for Exchange of Balance of Payments, International Investment Position and Reserve Assets Statistics within the ESCB (which includes a data revision timetable), as well as with the Eurostat Timetable for Exchange of Data and Policy of Revisions in the European Union. Observing this policy of revisions ensures the comparability of statistics between Member States of the European Union and the European System of Central Banks. These revisions provide users with timely information on the updated data by separate items.[47] Following the requirements of the ECB and Eurostat Timetables, the policy on revisions pursued by the Bulgarian National Bank is based on the following principles:

(i) Each publication might include, if necessary revisions of the data for the previous reporting period. With the forth quarter data, published in March, and the second quarter data, published in September of the current reporting year, the timetables give opportunity for revising the data for the previous up to four years, if necessary. In December with the publication of the data for the third quarter, data revision for the current and previous years is possible, if necessary.

(ii) When ongoing changes are made due to additional information collected, as well as resulting from elimination of errors, the Bulgarian National Bank timely informs the users through the notes at the end of the IIP table.

(iii) When significant revisions are made due to changes in the methodology for reporting of certain IIP components or other reasons, the Bulgarian National Bank publishes in advance information on the changes to facilitate the users of the data.

V. Data Dissemination

The Bulgarian National Bank disseminates the quarterly IIP data on its web site – *http://www.bnb.bg*.

The data is published also in the *Bulgarian National Bank Monthly Bulletin*.

Data on the international investment position of the country is included in the semi-annual and in the annual official reports of the Bulgarian National Bank.

Data are simultaneously released to all interested parties.

VI. Contacts

If you have any questions on the methodology applied by the Bulgarian National Bank or on the international investment position data published, please do not hesitate to send them to Mr. Emil Dimitrov,

[47] The annual data on foreign direct investment in the country are revised 15 months after the close of the reporting period (after the annual NSI data on the non-financial sector are received in the BNB).

Director of the Statistics Directorate, *via* e-mail at *Dimitrov.E@bnbank.org*, and Mrs. Liliana Bancheva, Head of the Balance of Payments and External Debt Division, *via* e-mail at *Bancheva.L@bnbank.org*, or by mail to the following address:

International Reserves and Foreign Currency Liquidity Data Template of Bulgaria

The Bulgarian National Bank is in charge of the compilation of the *International Reserves and Foreign Currency Liquidity Data Template (the Data Template) of Bulgaria*. These data are processed by the Balance of Payments and External Debt Division within the Statistics Directorate of the BNB.

I. Concepts of the Data Template

The data template on international reserves and foreign currency liquidity is compiled in accordance with the IMF's *International Reserves and Foreign Currency Liquidity Guidelines for a Data Template* (IMF, 2001) as well as with the Fifth Edition of the *Balance of Payments Manual* (IMF, 1993). The framework of the Data Template is built on two related concepts: (1) International Reserves (Reserve Assets) and (2) Foreign Currency Liquidity. The Fifth Edition of the *Balance of Payments Manual* sets forth the definition of the country's international reserves: 'those external assets that are readily available to and controlled by monetary authorities for direct financing of payment imbalances, for indirectly regulating the magnitudes of such imbalances through intervention in exchange markets to affect the currency exchange rate, and/or for other purposes' (paragraph 424). The concept of the foreign currency liquidity data template is broader than that of international reserves. It refers to the amount of foreign exchange resources that is readily available to the authorities to meet a sudden increase in the demand for foreign exchange and the potential (net) drains on foreign currency resources resulting from short-term foreign currency liabilities and off-balance-sheet activities of the authorities.

II. Key Features of the Data Template

A. Institutional Coverage

In accordance with the currency board arrangement, the Bulgarian National Bank is the only institution holding official international reserves in Bulgaria. The template covers the Bulgarian National Bank as monetary authorities which manage and hold the international reserves and the central government (excluding social security funds) which accounts for most of the official foreign currency obligations.

B. Financial Activities Covered

The Data Template covers only instruments in foreign currencies. Foreign assets in non-convertible currencies, as well as all other assets that do not meet reserve assets concept are excluded.

C. Valuation Principles and Conversion

International reserves are revalued daily at market exchange rates. Securities positions are revalued daily at the market price of the instruments concerned on the previous working day. Gold is revalued daily at the current market price, whichever is lower. Interest is accrued daily and classified under item 1(A). Data are converted into national currency or euro equivalents (the lev is linked to the euro at a fixed exchange rate) on the basis of official exchange rates announced by the Bulgarian National Bank daily. The reserve data template is calculated and revalued monthly.

III. Structure of the Data Template

The Data Template consists of four sections:

(1) Official reserve assets and other foreign currency assets broken down by major components, viz. convertible foreign currency

A. Official reserve assets (securities, currency and deposits); IMF reserve position; SDRs, gold and other (accrued interest).

B. Other foreign currency assets (central government deposits with local banks, gold not included in the official reserves, Brady bonds collateral).

This section covers stocks data. The definition of these data is consistent with the methodology exposed in the fifth edition of the IMF's *Balance of Payments Manual*. Under Article 42 of the Law on the Bulgarian National Bank, the BNB compiles the balance of payments of Bulgaria, a major functional category of which are the reserve assets.

The types of foreign assets that are included in the official reserves of the BNB are explicitly defined by Article 28 of the Law on the BNB.

Other foreign currency assets refer to foreign currency assets of the BNB that are not included in the official reserves, as well as such assets held by the government (excluding social security funds).

Sources: Data on official reserve assets and on other foreign currency assets are based on the accounting records of the BNB. *International reserves and foreign currency liquidity template* data can be reconciled with the annual reserve assets data shown in the International Investment Position both published on the BNB website (www.bnb.bg), as well as with the assets data in the monthly Balance Sheet of the Issue Department and with the BNB Analytical Reporting table both published on the BNB website (www.bnb.bg). Data on central government deposits with local banks are provided by banks through Money and Banking Statistics Division within the Statistics Directorate of the BNB.

(2) Predetermined short-term drains on foreign currency assets

This section covers foreign currency flows related to predetermined payments of principal and interest associated with loans and securities up to and including one year. Unlike data on external debt and international investment position which are based on residency concept (*i.e.* only liabilities to non-residents irrespective of currencies involved should be included), data included in Section II relate only to liabilities in foreign currencies irrespective of the residency of the holder.

Source: Data on predetermined short-term drains on foreign currency assets are based on Ministry of Finance projections on principal and interest payments on loans and securities denominated in foreign currencies in the 12-month period ahead.

(3) Contingent short-term drains on foreign currency assets

Section III covers contingent foreign currency flows which refer to contractual obligations that might give rise to potential future outflows or inflows of foreign currency assets. By definition, contingent drains cover off-balance-sheet activities.

Source: Ministry of Finance.

(4) Memo items

This section covers stocks and flows not disclosed in the previous sections but relevant for assessing the foreign currency official reserves and liquidity positions (financial instruments denominated in foreign currency and settled in domestic currency) as well as the currency composition of official reserves.

Sources: the Ministry of Finance provides monthly stock data on securities issued for the structural reform (ZUNK) which are denominated in foreign currency and settled in levs. Data on the currency composition of official reserves are provided by the BNB.

IV. Periodicity and Timeliness of the Data Template Publications

The Bulgarian National Bank compiles and publishes International Reserves and Foreign Currency Liquidity Data Template of Bulgaria on a monthly basis within three weeks after the close of the reference period.

V. Data Revision Policy

Revisions to published official reserve assets and international reserves and foreign currency liquidity data are not a common practice. Data on official reserve assets are based on the accounting records of the BNB and are revised only if the accounting records are revised. The policy on revisions pursued by the Bulgarian National Bank is based on the following principles:

(i) As for the International Reserves and Foreign Currency Liquidity data, each monthly publication may include revisions of the data for the previous month.

(ii) When on-going changes are made due to additional information collected, as well as resulting from elimination of errors, the Bulgarian National Bank timely informs the users through monthly press releases and through the notes at the end of the Data Template table.

VI. Data Dissemination

The Bulgarian National Bank disseminates the monthly official reserve assets and international reserves and foreign currency liquidity data on its website: www.bnb.bg. Data are presented in million euro.

Data are also published in the semi-annual and in the annual official reports of the Bulgarian National Bank.

VII. Contacts

If you have any questions on the methodology applied by the Bulgarian National Bank or on the official reserve assets and international reserves and foreign currency liquidity data published, please do not hesitate to send them to Mr. Emil Dimitrov, Director of the Statistics Directorate, *via* e-mail at

Dimitrov.E@bnbank.org, and Mrs. Liliana Bancheva, Head of the Balance of Payments and External Debt Division, *via* e-mail at *Bancheva.L@bnbank.org*, or by mail to the following address:

3 Fiscal Sector

Information on the fiscal sector is classified into three categories:
(a) *general government sector* operations (*government sector*);
(b) government operations (republican budget);
(c) government debt.

Fiscal sector includes all ministries, agencies, extra-budgetary funds, individual units of social security and other institutions of the central government, municipalities, as well as enterprises financed and controlled by them.

The consolidated state budget covers data on the government sector and includes the republican budget, the budgets of social security, legal authorities, universities financed by the government, the Bulgarian Academy of Sciences, municipalities, as well as extra-budgetary funds and accounts. The *general government* sector corresponds to the methodology requirements of the European System of Accounts, rev. 1995.

The republican budget includes the central republican budget (the budget of the Ministry of Finance), budgets of other ministries and agencies, regional authorities and the National Audit Office. Together with the budgets of the social security, legal authorities, universities financed by the government, Bulgarian Academy of Sciences and their extra-budgetary accounts it forms the *central government* subsector. The institutional coverage of this sub-sector corresponds to the methodology of the European System of Accounts.

4 Real Sector

Tables of the real sector are arranged in the following groups:
(a) macroeconomic indicators (national accounts);
(b) labour market;
(c) price indicators.

Real sector covers a few groups of institutional units – residents on the economic territory of Bulgaria. These include *non-financial corporations* whose main activity is production and sale of goods and non-financial services for the purpose of making profit; *non-profit institutions serving households* which provide goods and services free of charge or at economically insignificant prices; *households* – residents in Bulgaria regardless of their type and amount. Real sector also includes unincorporated production units, as well as those with single-entry accounting owned by local physical persons.

This section of the BNB Monthly Bulletin includes data on:

• *gross domestic product* – under the method of end-of-use expenditure and under the production method.

In accordance with the requirements of the European System of Accounts, 1995, holding gains are excluded from GDP data, *i.e.* changes in its value due to price fluctuations are excluded. Data not reconciled with *Supply – Use* final tables of the NSI are preliminary.

• *labour market* – employed under labour contract (public and private sectors), changes in their number (by economic sector), number of unemployed (total, young people, adults) and unemployment rate, average wage of employed (by type of ownership and by economic sector). The NSI publishes monthly data on employment and average wage in the second month following the end of the relevant calendar quarter.

• *consumer price changes* – compared to the previous month, compared to the relevant month of the previous year and compared to December of the previous year.

Resolutions of the BNB Governing Council

21 January The Governing Council approved Ordinance No. 30 on Calculation of the Premium Contributions Due by Banks under the Law on Bank Deposit Guarantee.

The Governing Council refused to grant a licence for conducting operations as an electronic money institution to Cash Credit EAD.
