* Analytical reporting of the balance of payments in accordance with IMF 5th edition of the Balance of Payments Manual.¹ Final data for 1997 and preliminary data for 1998 and January 1999.² Data based on customs declarations. Preliminary data on import and export in 1998 is revised by NSI. Data for January 1999 is provided by the MF Computing Center, complemented with NSI data and adjusted by the BNB.³ BNB estimates.⁴ NSI data and BNB estimates.⁵ Including data provided by the Agency for Foreign Aid and the Bulgarian Red Cross.⁶ A minus sign denotes flight of capital (increase in assets or decrease in liabilities).⁷ Data provided by the companies with foreign partnership, MF, Privatization Agency, NSI, Central Depository, specialized ministries and the BNB.⁸ Includes changes in forex deposits of individuals and private companies.⁹ Excludes changes due to valuation adjustments on the *Monetary gold* and *Reserve position with the IMF* items.¹⁰ Includes loans extended for balance of payments support (incl. EU, the World Bank, etc.), rescheduled payments and arrears.

See Methodological notes.

External Sector**Imports and Exports**

Data on imports and exports is based on customs declarations. This includes: export of consumer goods to other countries; reexport; temporary import of goods for processing and subsequent export; temporary export of goods and subsequent import. Also included is information on imports/exports based on customs declarations not processed by the MF Computing Center, including special production, natural gas, electricity, bunkering (replenishment of airplanes and ships with fuel, food, etc.).

Export data is on a recipient-country basis and import data is on a producing-country basis. A criterion for the inclusion of foreign trade transactions into a particular period is the date of crossing the state border.

In accordance with the requirements of the *System of National Accounts* (1993) and the *IMF Balance of Payments Manual*, imports and exports included in the balance of payments are reported at FOB prices. The structure of imports by use and by geographic region is recorded at CIF prices.

Imports and exports are reported on a monthly basis by the BNB, and on a quarterly basis working alongside the NSI.

Balance of Payments

The Bulgarian National Bank reports the country's balance of payments in accordance with the fifth edition of the *IMF Balance of Payments Manual*. In addition, the Bank publishes an analytical table constructed under the fourth edition of the *Manual*.

Current Account. Data on *Imports* and *Exports* of goods is reported FOB, that is a good's price including the costs of production, transportation and insurance up to the border of the exporting country. Reporting of imports and exports is done by the National Statistical Institute and the Bulgarian National Bank using a common methodology.

Transportation services comprise services related to the transportation of goods, cargo, passengers, and services connected with the exploitation of pipelines and others. The receipts and payments connected with freight and passenger transportation are based on estimates of the Bulgarian National Bank and the National Statistical Institute.

The receipts and payments of *travel services* are based on NSI data on the number of tourists classified by purpose of visit and by country, and on estimates of the Bulgarian National Bank.

The *Interest* item of the current account includes interest paid and due to be paid on the country's foreign financial assets and liabilities respectively.

The items *Transfers (private)* and *Unrequited transfers* report received or extended grants, aids, inheritances, lottery prizes, pensions, taxes, social security contributions, etc.

Capital Account. The *Direct investment* item reports direct investments realized by residents abroad as assets, and direct investments of nonresidents in the country as liabilities.

Portfolio investment comprises investment in equities (provided their share in the shareholders' equity does not exceed 10%), bonds and bills, short-term certificates of deposit, etc.

The *Medium- and long-term loans* item includes official and private financial loans disbursed by nonresidents in the respective period (without loans extended by the IMF and loans disbursed by direct investors to domestic enterprises). Due principal repayments on these loans are separately reported.

Loans extended (net) shows the net amount of receivables from loans extended by Bulgaria to other countries.

Commercial banks forex deposits shows the changes in balances on commercial banks' current and settlement accounts abroad.

Corporate forex deposits includes changes in balances on accounts of Bulgarian companies abroad (authorized by the Ministry of Finance).

Other forex deposits reflects changes (an increase or a decrease) in foreign currency deposits of individuals and private companies in domestic banks.

Changes in BNB assets in foreign banks are the major component in *BNB reserves*.

Use of Fund credit shows the net change in Bulgaria's obligations to the IMF.

Foreign Debt

Bulgaria's obligations in convertible currency in the *gross foreign debt* table (by creditor) are divided into *long-term* obligations (with maturity of over one year) and *short-term* obligations.

The item *Public and publicly guaranteed debt* includes the government debt and government guarantees on loans disbursed to Bulgarian companies.

The item *Short-term debt* includes all the country's debts with a term of less than one year. Consistent with international standards and in order to provide consistency between reported balance of payments flows and data on foreign debt service, the item *Short-term debt* includes arrears on interest and principals both on the public and publicly guaranteed debt and the private debt.

The item *Other private creditors* includes nonresidents' deposits in domestic commercial banks and nonresidents' purchases of government securities denominated in foreign currency. Also included is information received by the Bulgarian National Bank on credits extended (with the permission of the Ministry of Finance) to local physical and legal persons by nonresident private creditors.

2

Monetary Sector

Overview

Monetary and banking statistics is based on balance sheet data and is derived from monthly trial balances of all financial institutions within the banking system: the BNB and commercial banks (including those in liquidation). The information as presented meets international standards and reflects country-specific aspects of accounting and banking methodology.

Bank assets and liabilities are classified according to sector, currency and financial instrument. For the needs of monetary and banking statistics the national economy is split into three sectors: banking, government and nongovernment. The country's relations with the rest of the world are reflected in the external sector (nonresident legal and physical persons).

The government sector consists of the government (general government budget), local budgets, state funds and extrabudgetary accounts. The government and local budgets form the state budget, which in combination with state funds and extrabudgetary accounts form the consolidated government sector.

The nongovernment sector comprises state-owned enterprises, private companies, the public (households) and nonbank financial institutions. The latter include financial brokerage houses, insurance companies and other organizations within the financial sector but outside the banking sector.

The BNB has been preparing monthly monetary surveys since March 1990. Several major changes in the monetary survey's format and content were made until May 1995: lev and foreign exchange items were separated, monetary aggregates were segregated according to liquidity, etc. The most significant changes in time series have occurred since 1 June 1995 with the introduction of the Uniform National Chart of Accounts; consequently all monetary and credit aggregates were segregated according to term, sector and currency. Breaks in time series could not be removed because of the different methods used for data collection and processing, and the absence of database.

The banks in liquidation are required to provide the same set of information as operating banks. In case banks fail to meet the terms required by regulation, statistical processing of the latest available data is made. Consolidated data on the banks in liquidation is shown in an additional column to the monetary survey and analytical account of commercial banks.

Data is revised when an individual bank makes adjustments to its data, or preliminary data (estimates) has been published. This takes place generally in the last month of the year and is explicitly stated. As accounting entries in the annual balance sheets of commercial banks and the BNB close in March the following year, no data adjustments are made for the prior three months (December, January and February).

Monetary Survey

The monetary survey aggregates the balance sheets of the monetary authorities (BNB) and commercial banks. It includes major monetary aggregates within the money supply, and its sources: net foreign assets and net domestic assets. Net foreign assets are derived as the difference between foreign assets and liabilities of the BNB and commercial banks. Within *foreign assets*, the country's gross foreign exchange reserves are shown, including BNB most liquid foreign assets. From 1 July 1997, in compliance with the new Law on the BNB, these are equal to the assets of the Issue Department incorporated separately within BNB balance sheet, which took the function of a currency board to maintain a fixed exchange rate of the Bulgarian lev to the Deutschemark (since 1 January 1999 to the Euro)

Net domestic assets include domestic credit and a general balancing line termed *Other items (net)*. Domestic credit incorporates lending to the consolidated government sector and the nongovernment sector. Credit to the government sector is netted – gross claims less government deposits – and credit to the nongovernment sector is in gross terms. Under *Other items (net)*, a number of accounts are netted relating to interbank and intrabank relationships, relationships between the BNB and commercial banks, banks own funds, as well as unclassified assets and liabilities.

Claims on the government include claims of the BNB and commercial banks and are classified according to currency and instrument – government securities, loans, etc. Government securities are split according to their maturity into short-term (up to 12 months), medium-term (up to five years) and long-term (over five years). Short-term government securities include lev treasury bills issued for budget financing (discount and interest-bearing); medium-term government securities include lev issues for budget financing and government securities for structural reform (for conversion of state-owned companies' nonperforming debts to banks); long-term government securities include government bonds issued for structural reform under the Law on Settlement of Nonperforming Credits Negotiated prior to 31 December 1990 (ZUNK) and under Council of Ministers' decrees of similar nature, those issued under the Law on State Protection of Deposits and Accounts with Commercial Banks in respect of which the BNB has petitioned the institution of bankruptcy proceedings (LSPDACB), as well as issues for securitization of the government's direct debt to the BNB.

Foreign currency government securities consist of medium- and long-term government bonds denominated in US dollars, issued for structural reform. Medium-term government bonds are issued under the LSPDACB, and long-term under ZUNK.

Government lev loans include short-term loans from the BNB (up to three months within a calendar year and up to 5% of the revenue on the consolidated state budget under the old Law on the BNB of 10 June 1997; long-term direct loans from the BNB (under the SBL for the corresponding years) and the outstanding direct debt to the DSK Bank foreign currency loans are extended only

from the BNB and are in compliance with the new Law on the BNB of 10 June 1997. These are denominated in special drawing rights (SDR), corresponding by maturity and interest to the country's loans from the IMF.

Other claims are in levs and foreign currency. These include primarily expenditure and revenue accounts with the BNB and commercial banks. Of note is the fact that national accounting standards use the accrual basis of accounting for a number of accounts in the consolidated government sector. This is expressed in a separate keeping of income and expenditure accounts during the calendar year and their closing through netting at year-end. For the needs of monetary survey accrual accounts are reported in net value during the calendar year as well.

Claims on the nongovernment sector are reported at gross value (in levs and foreign currency) and include credits, equity participations, etc. Data on *private companies* and *individuals* is presented only by commercial banks, and data on state-owned companies and nonbank financial institutions by the BNB and commercial banks.

For the purpose of analysis *Other items (net)* is subdivided into two items: *Own funds* and *Other assets and liabilities (net)*. The *Own funds* item includes *Capital and reserves* and *Financial result*, the latter comprising profit, financial revenue, financial expenditure and current expenses. The *Own funds* item is presented with an opposite sign due to the transfer of this item from the balance sheet liabilities side to the assets side so as to leave just money in the liabilities side. As a result, a negative *Financial result* shows a profit and a positive one a loss.

Money supply is presented by currency, monetary aggregate and sector. The M1 monetary aggregate includes the most liquid monetary instruments used in settlements: *Currency outside banks* and *Demand deposits* (current accounts). In compliance with the foreign exchange regime providing for settlements in the country only in national currency, this monetary aggregate is reported fully in levs.

Quasi-money is a less liquid monetary aggregate and comprises time deposits, savings deposits and foreign currency deposits. Time deposits include lev deposits for a specific term (one-, three-, six-, twelve-month deposits, etc.). Savings deposits include only individuals' deposits in national currency and some other deposits (e.g. children's deposits). Foreign currency deposits include both current accounts and time deposits. The M2 monetary aggregate is comprised of quasi-money and M1 monetary aggregate.

The least liquid funds include *Money market instruments* and *Import and restricted deposits*. These are in levs and foreign currency and together with M2 constitute the broadest monetary aggregate M3 (money supply, broad money).

Analytical Reporting of the BNB and Commercial Banks

The consolidated monetary survey is based on data from the analytical reporting of the BNB and commercial banks, including information from their monthly trial balances and breakdowns of assets and liabilities by sector, maturity, liquidity degree and type of currency (national and foreign).

Bulgarian National Bank. *Foreign assets* are divided according to liquidity into gross international foreign exchange reserves and other foreign assets. Monetary gold is included in gross international reserves but is presented separately. Until 30 June 1997 monetary gold was assessed at USD 300 per 1 troy ounce; thereafter, consistent with the new Law on the BNB, at DEM 500 per 1 troy ounce, or at its market value, if lower.

Other foreign assets are less liquid and include participations in international financial institutions (excluding Bulgaria's reserve position in the IMF which is part of the gross international forex reserves), foreign government securities used as collateral against government bonds issued to settle Bulgaria's foreign debt to London Club creditor banks, nonmonetary gold and other precious

metals, letters of credit, etc.

Claims on nonfinancial state-owned enterprises and *Claims on nonbank financial institutions* include equity participations in companies directly related to BNB activity.

Claims on commercial banks include monetary policy instruments employed by the BNB, as well as other relations with commercial banks. Following the introduction of the currency board collateralized credit is the only instrument to refinance commercial banks. The BNB may extend collateralized credits to commercial banks in a lender of last resort capacity in case of a liquidity risk threatening the stability of the banking system.

Reserve money includes currency outside banks, funds of commercial banks and some nonbank financial institutions' funds with the BNB and constitute the monetary base (M0 monetary aggregate). Reserve money is in levs and foreign currency and includes minimum required reserves and excess reserves (settlement accounts, current accounts and time deposits).

Foreign liabilities reflect BNB obligations to the external sector. After 1 July 1997 BNB foreign liabilities include only obligations to the IMF.

The *Own funds* item includes BNB fixed capital (BGL 200 million until 1 July 1997 and BGL 20 billion after this date), reserve funds and BNB current financial result (net).

Commercial banks. *Reserves* include funds on their accounts with the BNB and cash in commercial banks' vaults. The differences with the corresponding reserve money component in BNB analytical reporting are due to time discrepancies of counter flows between the central bank and commercial banks.

Foreign assets include claims on nonresidents (banks, governments, nonbank institutions, etc.) and foreign currency in banks' vaults. Commercial bank foreign assets are not included in Bulgaria's gross international forex reserves.

Claims on the government contain claims on the government's unsettled foreign obligations included in commercial bank foreign liabilities. Writing-off of these claims from assets and liabilities prompts dramatic changes in time series.

Interest Rate Statistics

The *base interest rate* is the effective interest rate at end of month based on the average annual yield attained at three-month government securities primary auctions.

Interest rate statistics includes summarized data on interest rate levels of banks, except those in liquidation. Interest rates are averaged on a weekly basis for a month.

Short-term interest rates cover maturities from one day up to twelve months, and long-term interest rates maturities over twelve months.

Time deposit rates are based on interest rates on one-month savings deposits in levs and foreign currency, being the preferred maturity for savings.

Interest rates on demand deposits include interest rates on current accounts and sight deposits of state-owned and private companies.

Interest rates on credits and *time deposits* are the average weighted rates of three sectors: state-owned companies, private enterprises and the public.

Lending rates reflect interest rates on newly negotiated lev and foreign currency loans during the corresponding month.

Annual compounding of the base interest rate is made on a quarterly basis, and that of deposits and credits on a monthly basis.

Yield of government securities is computed as the average weighted yield of all issues during the calendar month in actual amount.

Real interest rate levels on credits and deposits are based on the average interest rates during the month deflated by the monthly inflation rate reported for the same period.
